One Arrow, One Life is a classic treatise on kyudo, the art of traditional Japanese archery, and its relation to the ideals and practice of Zen Buddhism. With a solid introduction to the form and practice of Zen meditation, as well as a thorough description of the Eight Stages of Kyudo, One Arrow, One Life captures the subtleties of the complementary nature of thought and action, movement and stillness. Demonstrating the importance of bringing movement, posture and breathing into harmony, One Arrow, One Life interweaves Zen philosophy with daily experience and techniques, teachers, and the dojo, to give a name and face to kyudo. Beginning with its discussion of the breathing, posture, and concentration that is fundamental to both disciplines, then quickly moving on to the subtleties of advanced practice, author, Ken Kushner ties everything together into a personal testimony of the pervasiveness of Zen in everyday life. Illustrator, Jackson Morisawa's line drawings bring the art of kyudo to life. For those interested in Zen and moving meditation, kyudo practitioners of all levels, as well as students of the Way of martial arts, this volume is an indispensable guidebook.

The book Kafka Streams - Real-time Stream Processing helps you understand the stream processing in general and apply that skill to Kafka streams programming. This book is focusing mainly on the new generation of the Kafka Streams library available in the Apache Kafka 2.x. The primary focus of this book is on Kafka Streams. However, the book also touches on the other Apache Kafka capabilities and concepts that are necessary to grasp the Kafka Streams programming. Who should read this book? Kafka Streams: Real-time Stream Processing is written for software engineers willing to develop a stream processing application using Kafka Streams library. I am also writing this book for data architects and data engineers who are responsible for designing and building the organization's data-centric infrastructure. Another group of people is the managers and architects who do not directly work with Kafka implementation, but they work with the people who implement Kafka Streams at the ground level. What should you already know? This book assumes that the reader is familiar with the basics of Java programming language. The source code and examples in this book are using Java 8, and I will be using Java 8 lambda syntax, so experience with lambda will be helpful. Kafka Streams is a library that runs on Kafka. Having a good fundamental knowledge of Kafka is essential to get the most out of Kafka Streams. I will touch base on the mandatory Kafka concepts for those who are new to Kafka. The book also assumes that you have some familiarity and experience in running and working on the Linux operating system.

Based on his work at some of the world's largest companies, including Ford, Adidas, and Chanel, Christian Madsbjerg's *Sensemaking* is a provocative stand against the tyranny of big data and scientism, and an urgent, overdue defense of human intelligence. Humans have become subservient

to algorithms. Every day brings a new Moneyball fix--a math whiz who will crack open an industry with clean fact-based analysis rather than human intuition and experience. As a result, we have stopped thinking. Machines do it for us. Christian Madsbjerg argues that our fixation with data often masks stunning deficiencies, and the risks for humankind are enormous. Blind devotion to number crunching imperils our businesses, our educations, our governments, and our life savings. Too many companies have lost touch with the humanity of their customers, while marginalizing workers with liberal arts-based skills. Contrary to popular thinking, Madsbjerg shows how many of today's biggest success stories stem not from "quant" thinking but from deep, nuanced engagement with culture, language, and history. He calls his method sensemaking. In this landmark book, Madsbjerg lays out five principles for how business leaders, entrepreneurs, and individuals can use it to solve their thorniest problems. He profiles companies using sensemaking to connect with new customers, and takes readers inside the work process of sensemaking "connoisseurs" like investor George Soros, architect Bjarke Ingels, and others. Both practical and philosophical, Sensemaking is a powerful rejoinder to corporate groupthink and an indispensable resource for leaders and innovators who want to stand out from the pack.

An often-quoted statistic is, "5% of salespeople earn 90% of the commission generated in residential real estate sales". The same statistic holds for true in many industries. Extraordinary salespeople develop a business plan that reaches for an extraordinary reputation that provides a powerful stream of enthusiastic referrals and repeat business. The result is a marketing advantage that cannot be matched by any other method.
