Aldo Leopold, father of the  
"land ethic," once said,  
"The time has come for  
science to busy itself with  
the earth itself. The first  
step is to reconstruct a  
sample of what we had to  
begin with." The concept  
he

expressedâ€"restorationâ€"  
is defined in this  
comprehensive new  
volume that examines the  
prospects for repairing  
the damage society has  
done to the nation's  
aquatic resources: lakes,  
rivers and streams, and  
wetlands. Restoration of  
Aquatic Ecosystems  
outlines a national  
strategy for aquatic  
restoration, with practical

recommendations, and  
features case studies of  
aquatic restoration  
activities around the  
country. The committee  
examines: Key concepts  
and techniques used in  
restoration. Common  
factors in successful  
restoration efforts.  
Threats to the health of  
the nation's aquatic  
ecosystems. Approaches  
to evaluation before,  
during, and after a  
restoration project. The  
emerging specialties of  
restoration and landscape  
ecology.

With the right information,  
we can develop public  
policies that work better.  
Public Policy: Politics,  
Analysis, and Alternatives,  
Eighth Edition helps  
students understand how  
and why policy analysis is  
used to assess policy  
alternatives. The text  
encourages them to not

only question the  
assumptions of policy  
analysts, but also  
recognize how various  
strategies are used in  
support of political  
arguments.

Technology transfer has  
played an increasingly  
important role in historic  
preservation during the  
latter half of the twentieth  
century, a situation  
attested to by the  
undertaking of an  
important congressional  
study in 1986 that  
assessed the role of  
federal agencies in the  
field. In this book leading  
researchers update the  
earlier findings and  
contribute state-of-the-art  
reviews and evaluations  
of technological progress  
in their areas of expertise.

This new edition features brand new chapters on opera, dance, and unions, information on working with intimacy and fight directors, updated tips and tricks, and vibrant color images. Using simple language and detailed explanations, this book is the perfect primer for the beginning stage management student. Alongside standards of basic principles and processes, you'll find practical guidance on everything from acquisitions to preservation. Managing collections in today's libraries is more complicated and challenging than ever. Electronic formats, new options for collaboration and sharing, and the drive to use data for evaluation purposes are just a few of the changes now driving collection management. This updated edition of a classic text addresses changes in the field and provides a thorough overview of what collection development specialists now need to know to effectively and efficiently manage processes that range from selection and assessment to sharing resources, handling challenges, weeding, and preservation. Readers will</p>	<p>find increased coverage of technical services, intellectual freedom and censorship, and collection policy development, as well as budget development and tracking, joint purchasing, and negotiating with vendors. Updates on e-resources, user needs assessment (including data visualization), and disaster management, along with suggestions for further reading, are also included. Engagingly written and easy to understand, this is a valuable text for students preparing for careers in public, academic, school, and special libraries.
