Follow the Link: A Journey Through Technology explores how some of today's greatest inventions came to be - and takes the reader on a journey through a network of knowledge. It tells the story of how we figured out what electricity is and how we learned to use it to communicate with

each other. Over the centuries, we have taken the same power that creates a flash of lightning and used it to make Wi-Fi hotspots, power touchscreens, and send video messages. The inspiration behind new ideas is often surprising, always unpredictable and sometimes rather bizarre - discover how an experiment with frogs' legs made people think animals were kept alive by lightning, and other strange and incredible tales of progress. *Titanic, A Very Peculiar History* QED Publishing

It boasted libraries, palm trees, swimming pools, a 50-phone switchboard and was nearly as tall as the Eiffel Tower... No, she's not a skyscraper, she's the Titanic! Marking the centenary of the sinking of the White Star Liner RMS Titanic in 1912, 'Titanic, A Very Peculiar History' delves into the human stories of both crew and passengers and the incredible feats of engineering and design involved in the ship's construction. The ebook also takes a look at events that occurred once the ship was wrecked, from discovering what dead passengers had tried to take with them to assessing the likelihood of us ever being able to raise the wreck for more study.

Featuring letters from the liner's passengers and crew and a taste of the superstitions and creepy coincidences that surround the ship's sinking, it's a great all-round look at the incredible facts and stories at the heart of the Titanic's conception, construction and maiden voyage.

When RMS TITANIC set sail for New York from Southampton on 10th April 1912, she was one of the great modern feats of engineering. Designed by a team of skilled engineers and boasting some of the most advanced technologies and safety features of the time, she was hailed as 'unsinkable'. Then, just four days into her maiden voyage, she struck an iceberg and sank, instantly becoming the most infamous maritime disaster in history. Of the 2,223 passengers on board, 1,517 died at sea. Now, 100 years on from that tragic day, the legend of Titanic lives on and the story of the ship continues to fascinate. To commemorate the 100th anniversary of the disaster, HISTORY? has brought together six programmes that examine what went wrong on that fateful day. We

will cover the building of the Titanic and the technology of the ship before delving beneath the surface to piece together its final moments, creating an intimate portrait of the vessel nobody believed could sink.

The Titanic is one of the most famous maritime disasters of all time, but did the Titanic really sink on the morning of 15 April 1912? Titanic's older sister, the nearly identical Olympic, was involved in a serious accident in September 1911 - an accident that may have made her a liability to her owners the White Star Line. Since 1912 rumours of a conspiracy to switch the two sisters in an elaborate insurance scam has always loomed behind the tragic story of the Titanic. Could the White Star Line have really switched the Olympic with her near identical sister in a ruse to intentionally sink their mortally damaged flagship in April 1912, in order to cash in on the insurance policy? This book addresses some of these conspiracy theories and illustrates both the questionable anomalies and hard technical facts that will prove the switch theory to be exactly what it is - a mere legend.

"I have read dozens of books on starting companies, but this is the first that accurately captures why startups fail and provides a tool for entrepreneurs and investors to measure and manage these

sources of failure." Michael Hatfield, Co-Founder, Cerent, Calix, Cienna, and Carium. What makes a startup successful? This book, from award-winning business school professors and a tech serial entrepreneur, tells what makes startups successful. Instead of telling startups what to do, like most startup books, they share what startups should avoid. Along the way, they share small business startup success stories gleaned from the How Built This Podcast and their firsthand experiences. These stories of startup success are contrasted with stories of startup failure from startup graveyards and most notably, the Titanic. Like many of today's startups, the Titanic hoped to disrupt the transportation industry of its time. It fell short, to a disastrous outcome, from the same sources that prevent startup success today. Get a startup game plan! This startup book uses the Titanic and a sailing metaphor to provide a startup roadmap template. It shows what makes startups successfully navigate through challenges in startup investing, founding, and hiring with a game plan to get through the Human Ocean. It offers a startup guide to customer success in working through the

Marketing Ocean. It even highlights what startups need to invest in to get through the Technical and Strategy Oceans. Its Iceberg Index gives entrepreneurs, startups, and small businesses a way to track their progress on the startup roadmap template. It also helps investors assess what startups to invest in. Many entrepreneurs assume that the Titanic was sunk by a single iceberg. The Titanic Effect shows, that like many startups, it's not a single misstep but a series of mistakes that keep a startup from being successful. This combination of missteps is called the Titanic Effect. Who can benefit from this startup roadmap? Entrepreneurs in the early stages of building a startup. They will learn what makes a startup successful. They will develop a to-do list of decisions to make and actions to take. Small business owners will also identify key next steps to building their startup game plan. Investors can identify what to avoid in startup investments and what startups to invest in. Students will learn how to evaluate the success potential of a startup and will read small business and startup success stories. These three co-authors have witnessed firsthand what leads to

startup success. They have made it their mission to help entrepreneurs, startup founders and startup investors succeed. Drs. Todd and M. Kim Saxton bring more than two decades of academic and professional experience in business strategy, entrepreneurship, marketing, and angel investing. Serial tech entrepreneur, Michael Cloran, adds his two decades' of experiences in launching his own startups as well as building software products for other startups. In addition, the co-authors serve on various boards of entrepreneurial ventures and startup advisory associations. They have shared their expertise from the stage to dozens of audiences, including students, entrepreneurship and professional development associations, academic societies, and global companies like Roche Diagnostics and Pfizer Pharmaceuticals. **The Titanic Story** CreateSpace Disasters of Technology Benchmark Education Company [Transports of Delight](#) Bearport Publishing Uncover the secrets of the Titanic in this fascinating exploration for kids 8 to 12 If you're interested in the incredible story of the R.M.S. A Journey Through Technology Open Court Publishing

One hundred years ago, a ship thought to be indestructible suffered the ill fate to strike an iceberg during its maiden voyage across the North Atlantic. The unthinkable occurred, and the Titanic went to the bottom. What happened on that cold and inky night has haunted and entranced us ever since. Goodness knows, there have been other disasters-far too many disasters. But as the initial reception to Titanic, the most popular movie ever, just now being re-released in 3-D, proves:

There has never been a disaster that so captivates the human imagination as that of the sinking of the Titanic. Now, on the 100th anniversary of "the night to remember," LIFE revisits this awesome human drama. Heroism is involved, and

hubris. Romance and recrimination. A thousand stories spiraling outward-and all of them told in this commemorative LIFE book, in words and pictures. This oversized, deluxe book is visually splendid and exciting on every page. It includes archival photography, past reporting in LIFE and the modern-day explorations of Robert Ballard and others that inspired the James Cameron film. The book will include a special section on the new 3-D treatment of the classic movie, just now being released. We return to first-person accounts, and the words of the survivors are brought to life-with many small stories from steerage told as well as the large, well-known drama from above decks. The book will also include interstitial chapters to lend context, such as a history of famous shipwrecks, and where the Titanic fits in the grand picture. At the end of the story, the fact we entered with is inescapable: The Titanic tragedy is the one we care about, and need to revisit.

Titanic: The Last Great Images

This inspiring book shows how the spiritual side of life, with its thoughts, feelings, and aspirations, is intimately bound up with

our material technologies. From the wonder of Gothic Cathedrals, to the quiet majesty of lighter than air flight, to the ultimate in luxury of the north Atlantic steamers, Peter Hancock explores how these sequential heights of technology have enabled our dreams of being transported to new and uncharted realms to become reality. Sometimes literally, sometimes figuratively, technology has

always been there to make material the visions of our imagination. This book shows how this has essentially been true for all technologies from Stonehenge to space station. But technology is far from perfect. Indeed, the author argues here that some of the most public and tragic of its failures still remain instructive, emblematic, and even inspiring. He reports on examples such as a Cathedral

of the Earth (Beauvais), a Cathedral of the Seas (Titanic), and a Cathedral of the Air (Hindenburg) and tells their stories from the viewpoint of material transcendence. By interweaving their stories he reveals how technologies can succeed in elevating human beings and, in taking them to whole new realms of being, he explores and explains why these experiences are 'Transports of Delight.'
