From head trauma to scientific wonder—a “deeply absorbing . . . fascinating” true story of acquired savant syndrome (Entertainment Weekly). Twelve years

ago, Jason Padgett had never made it past pre-algebra. But a violent mugging forever altered the way his brain worked. It turned an ordinary math-averse student into an extraordinary young man with a unique gift to see the world as no one else does: water pours from the faucet in crystalline patterns, numbers call to mind distinct geometric shapes, and intricate fractal patterns emerge from the movement of tree branches, revealing the intrinsic mathematical designs hidden in the objects around us. As his ability to understand physics skyrocketed, the

“accidental genius” developed the astonishing ability to draw the complex geometric shapes he saw everywhere. Overcoming huge setbacks and embracing his new mind, Padgett “gained a vision of the world that is as beautiful as it is challenging.” Along the way he fell in love, found joy in numbers, and spent plenty of time having his head examined (The New York Times Book Review). Illustrated with Jason’s stunning, mathematically precise artwork, his singular story reveals the wondrous potential of the human brain, and “an incredible phenomenon which points toward dormant potential—a little Rain Man perhaps—within us all” (Darold A. Treffert, MD, author of *Islands of Genius: The Bountiful Mind of the Autistic, Acquired, and Sudden Savant*). “A tale worthy of Ripley’s *Believe It or Not!* . . . This memoir sends a hopeful message to families touched by brain injury, autism, or neurological damage from strokes.” —Booklist “How extraordinary it is to contemplate the bizarre gifts that might lie within all of us.” —People

Dayton, Ohio, is the "Birthplace of Aviation" and a remarkable area for spectres to soar. Stroll through the haunted Wright Patterson Air Force Museum with a guide that points out the ghostly features there and dine with "Chickie", the ghostly spinster at Amber Rose Restaurant. Read about an abandoned home filled with the ghostly residue of ectoplasm where two people from different families perished in the dank, dark basement. Hear new accounts about "Hamlet, the ghost" at the theatre of Blair Hall at Sinclair Community College, where he has been seen on the catwalks. Learn about the apparition of a house at the Haunted Trails of Sycamore Woods Park, torn down years ago, but still there for some to see. Dayton's ghosts will bring your nightmares to life.

During the early decades of the Cold War, large-scale investments in American defense and aerospace research and development spawned a variety of problem-solving techniques, technologies, and institutions. From systems analysis to

reconnaissance satellites to think tanks, these innovations did not remain exclusive accessories of the defense establishment. Instead, they readily found civilian applications in both the private and public sector. City planning and management were no exception. Jennifer Light argues that the technologies and values of the Cold War fundamentally shaped the history of postwar urban America. From *Warfare to Welfare* documents how American intellectuals, city leaders, and the federal government chose to attack problems in the nation's cities by borrowing techniques and technologies first designed for military engagement with foreign enemies. Experiments in urban problem solving adapted the expertise of defense professionals to face new threats: urban chaos, blight, and social unrest. Tracing the transfer of innovations from military to city planning and management, Light reveals how a continuing source of inspiration for American city administrators lay in the nation's preparations for war.
