Sentence Solution Rowman & Littlefield

What is it for a sentence to have a certain meaning? This is the question that William P. Alston, one of America's most distinguished and prolific analytic philosophers, addresses in this major contribution to the philosophy of language. His answer focuses on the given sentence's potential to play the role that its speaker had in mind—what he terms the usability of the sentence to perform the illocutionary act intended by its speaker. Alston defines an illocutionary act as an act of saying something with a certain "content." He develops his account of what it is to perform such acts in terms of taking responsibility, in uttering a sentence, for the existence of certain conditions. In requesting someone to open a window, for example, the

speaker takes responsibility for its being the case that the window is closed and that the speaker has an interest in its being opened. In Illocutionary Acts and Sentence Meaning, Alston expands upon this concept, creating a framework of five categories of illocutionary act and going on to argue that sentence meaning is fundamentally a matter of illocutionary act potential; that is, for a sentence to have a particular meaning is for it to be usable to perform illocutionary acts of a certain type. In providing detailed and explicit patterns of analysis for the whole range of illocutionary acts, Alston makes a unique contribution to the field of philosophy of language—one that is likely to generate debate for years to come.

Cognitive psychology deals with information processing, and includes a variety of thinking processes including perception, attention, memory, knowledge representation, categorisation, language, problem-solving, reasoning, and judgement. It is also concerned with the structures and representations involved in cognition. Cognitive psychology has significant applications of all areas of human endeavour. It is also the subject of intensive study when applied to health and ageing in the absence of a significant health problem as well as education and human-computer interaction. Other examples are eyewitness memory, autobiographical memory, spatial cognition, skill training, suggestibility, expertise and skilled behaviour.

Your "one sentence" is that irreducible part of your message that you want your audience to remember. A good sentence stops people in their tracks. It surprises them. It makes them think. And in today's age of information overload and short attention spans, getting your point across is more important and more difficult than ever. What Is Your One Sentence? will help you be a better communicator-fast. Mimi Goss teaches her unique One Sentence Method, which shows you how to distill your message into one sentence that captures your listeners' attention, moves your ideas forward, focuses the problem, and helps you achieve your goals. You'll learn to: Use the one sentence approach to tackle complex messages Take five simple steps to find one sentence that launches a dialogue Identify the basics of a memorable one sentence Speak in an authentic voice Whether you're teaching kindergartners, pleading for your life, or presenting the budget to Congress, What Is Your One Sentence? provides exercises and examples, looks at the psychology of communication, and takes you through a step-by-step process to find your core message and craft that one memorable sentence to hook listeners and keep them engaged.

Anyone who has ever tried to present a rather abstract scientific subject in a popular manner knows the great difficulties of such an attempt. Either he succeeds in being intelligible by concealing the core of the problem and by offering to the reader only superficial aspects or vague allusions, thus of deluding the reader by arousing in him the deceptive illusion of comprehension; Or else he gives an expert account of the problem, but as the untrained reader is unable to follow the exposition and becomes discouraged from reading any further. If these two categories are omitted from today's popular scientific literature, surprisingly little remains. But the little left is very valuable indeed. It is very important that the public is given an opportunity to experience-consciously and intelligently-the efforts and results of scientific research. It is not sufficient that each successive progression is taken up, elaborated, and applied by a few specialists in the field. Restricting the body of knowledge to a small group deadens the philosophical spirit of these people and leads to spiritual poverty. THE CORPSES OF TIMES GENERATIONS represents a valuable contribution to popular scientific writing. The main ideas to Theory are extremely well presented. Moreover, the presents state of our knowledge in which the paradigms of science are aptly characterized. Mr. Koscieljew shows how the criterial growth of our factual knowledge, with the striving for a unified conception comprising all empirical data, has led to the present situation which is characterized -despite all successes by an uncertainty concerning the choice of the basic theoretical concept.

This book argues in favour of cross-linguistic variation in sentence processing by providing empirical data from ambiguity resolution in Greek as L1 and L2. It is maintained that in highly inflected languages, like Greek, initial parsing decisions are determined by the interaction of morphological and lexical cues rather than by universal parsing principles.

Sentence Patterns in English and Hebrew offers an innovative perspective on sentential syntax, in which sentence patterns are introduced as constructions within the general framework of Construction Grammar. Drawing on naturally occurring data collected from the Internet, the study challenges the prevailing view of predication as the sole mechanism of sentence formation, and introduces the idea of patterning as a complementary, sometimes even alternative mechanism. Major sentence patterns of English and Hebrew are systematically presented, targeting both their form and their function. A contrastive analysis of the sentence patterns in these two languages results in postulating a typological group, in which cognitive motivations are shown to account for both similarities and differences within the typology. Sentence Patterns in English and Hebrew will appeal to scholars of constructional approaches, cognitive linguistics, typology, syntax, as well as anyone interested in English and Hebrew.

Modern Mathematics: Made Simple presents topics in modern mathematics, from elementary mathematical logic and switching circuits to multibase arithmetic and finite systems. Sets and relations, vectors and matrices, tessellations, and linear programming are also discussed. Comprised of 12 chapters, this book begins with an introduction to sets and basic operations on sets, as well as solving problems with Venn diagrams. The discussion then turns to elementary mathematical logic, with emphasis on inductive and deductive reasoning; conjunctions and disjunctions; compound statements and conditional statements; and biconditional sentences. Subsequent chapters focus on switching circuits; multibase arithmetic; finite systems; relations, vectors, and matrices; tessellations; and linear programming. The book concludes with an analysis of motion geometry and rubber sheet geometry, paying particular attention to radial enlargement and composite reflections as well as topological equivalence, networks for maps, and incidence matrices. This monograph is intended for students, parents, and teachers who are interested in modern mathematics.

What are the psychological processes involved in comprehending sentences? How do we process the structure of sentences and how do we understand their meaning? Do children, bilinguals and people with language impairments process sentences in the same way as healthy monolingual adults? These are just some of the many questions that sentence processing researchers have tried to answer by conducting ever more sophisticated experiments, making this one of the most productive and exciting areas in experimental language research in recent years. This book is the first to provide a comprehensive, state-of-the-art overview of this important field. It contains 10 chapters written by world-leading experts, which discuss influential theories of sentence processing and important experimental evidence, with a focus on recent developments in the area. The chapters also analyse research that has investigated how people process the structure and meaning of sentences, and how sentences are understood within their context. This comprehensive and authoritative work will appeal to students and researchers in the field of sentence processing, as well anyone with an interest in psychology and linguistics.

IN MEMORIAM OF ARTUR ROJSZCZAK For a teacher, the opportunity to write the Foreword to a student's work gives rise to a sense of fulfillment and pride. In this case, however, although the latter remains, the former has been effaced. In a well-ordered world Artur Rojszczak would have perhaps one day written tributes to ourselves. It is a poignant paradox when teachers are called upon to comment posthumously on the work of one of their students. This is a terrible task which falls to us—who have been not only mentors and colleagues to Artur, but also simply friends—of eulogizing someone who has died so soon, and so tragically. Artur was killed, together with his father, by an aggressive neighbour on September 27, 2001. Artur's wife was severely injured in the same attack. Artur was born on March 12, 1968 in S7ubice (close to the Polish-German border). He studied in the Electronics College in Zielona Góra, graduating in 1987. But from very early on his dream was to study philosophy, and to do so at the Jagiellonian University in Cracow; no other place was considered by him seriously. He entered the university in 1988.
