[The Secret To Controlling Type 2 Diabetes](#) American Diabetes Association

The premise of neuroplasticity on enhancing cognitive functioning among healthy as well as cognitively impaired individuals across the lifespan, and the potential of harnessing these processes to prevent cognitive decline attract substantial scientific and public interest. Indeed, the systematic evidence base for cognitive training, video games, physical exercise and other forms of brain stimulation such as entrain brain activity is growing rapidly. This Research Topic (RT) focused on recent research conducted in the field of cognitive and brain plasticity induced by physical activity, different types of cognitive training, including computerized interventions, learning therapy, video games, and combined intervention approaches as well as other forms of brain stimulation that target brain activity, including electroencephalography and neurofeedback. It contains 49 contributions to the topic, including Original Research articles (37), Clinical Trials (2), Reviews (5), Mini Reviews (2), Hypothesis and Theory (1), and Corrections (2).

This new edition is the most comprehensive reference on both the clinical and scientific aspects of diabetes, and is truly global in perspective with the inclusion of epidemiology and the nature and care of diabetes in different parts of the world. Following a similar format to the previous editions, the primary philosophy of the book is to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects of the disease. A valuable resource for the whole diabetes community, the new edition offers: * Fully revised, updated and expanded chapters * Comprehensive coverage of all aspects of diabetes * 116 extensively referenced chapters * Full colour throughout * Available in print and online The International Textbook of Diabetes Mellitus, Third Edition is also available online via Wiley InterScience. With the flexibility afforded by the powerful search and navigation capabilities of Wiley InterScience, you can search the Textbook by subject, article and keyword. New and revised articles added regularly ensure that both professionals and students working within diabetes are kept abreast of rapidly developing areas such as genetics, treatment and epidemiology. This excellent work is an essential reference tool for all members of diabetes and endocrine teams, medical students, medical schools and libraries, and provides a valuable resource for pharmaceutical companies and industries which have an interest in this important field. FROM REVIEWS OF THE SECOND EDITION: "The scope is extraordinarily wide and truly international...a must for all libraries and any individuals who are seriously interested in the diabetes epidemic..." (Diabetologia) "...a cornerstone in the field of diabetes..." (The European Journal of Medicine) "...This multi-authored textbook provides a wealth of information spanning virtually all aspects of diabetes..." (Trends in Endocrinology and Metabolism)

Enhancing Diabetes Education and Care in Ogun State, Nigeria Adesina OF, Talabi JE, Adediji D, Jaiyeola BJ, Solarin MT, Akinsanya AI, World Diabetes Foundation. Background: Primary Health Care is the first level of contact of individuals, the family and community within the national health system, bringing health care as close as possible to where people live and work. In Nigeria, diabetes care is absent at the Primary care level. Empowerment of workers within the primary care setting with knowledge and minimal equipment about diabetes will encourage and ensure earlier diagnosis and management of the disease and its complications. Also, screening (blood glucose testing) programmes should be set up in each Primary healthcare Centre to facilitate identification and earlier diagnosis of gestational diabetes. To achieve this, the Talabi Diabetes Centre, in conjunction with Ogun State Chapter of the Diabetes Association of Nigeria and the Ogun State Local Government Service Commission which oversees Primary Healthcare Centres in Ogun State of Nigeria applied for and obtained a grant from the World Diabetes Foundation (WDF15-1527) to train 1,000 Primary healthcare workers in Ogun State and equip 100 Primary healthcare Centres with basic diabetes care equipment over a period of two years from October 2016 to September 2018. Aim The aim of the project was to improve knowledge and strengthen the skill of Primary Healthcare Workers in Ogun State to deliver basic diabetes care while the objectives were to: i. Improve the knowledge base of 1000 primary healthcare workers on diabetes. ii. Improve the ability of 1000 primary healthcare workers to deliver good diabetes education and care thereby improving the lives of people living with diabetes in their communities. iii. Furnish the participating 100 Primary Healthcare Centres in Ogun state with Glucometres and strips and blood pressure monitors. iv. Screen 25,000 individuals who present to the various primary healthcare centres for diabetes. Method u2022t3 day update courses on Diabetes- 2 cycles per zone will be organized in the 4 zones to which the 20 Local Government Areas in Ogun state are divided. u2022t125 Primary Healthcare workers will attend the course per zone per cycle during which 20 lectures on the various aspects of diabetes will be delivered by various lecturers. u2022tAll the lectures delivered will be compiled into a training manual for distribution to participants. u2022tMonofilaments, Glucose monitors and strips will be distributed at the end of the 3 day program to the various Primary care centres represented at the course. u2022tAll the Health Centres will be encouraged to actively screen individuals who come to the Centres for routine care for diabetes. u2022t10 monofilaments will be distributed to each participating primary healthcare Centre to enhance foot screening. Results 505 Primary healthcare workers have been trained so far. Evaluation of the Pre- and Post-Test Questionnaire showed that their level of knowledge improved at the end of the lectures with only 1.1% left with a fair level of knowledge from the 40% with fair level of knowledge from the Pre Test. 2,000 copies of the Training manual were produced. Each participating Primary healthcare Centre had one copy for the generality of the staff while each of the participating 505 primary healthcare workers had a copy each. Each of the 100 participating Health Centres received the following: -One (1) Blood Pressure Monitor -Two (2) Blood Glucose Monitors -250 Glucose Monitor strips - 10 Monofilaments. 4,996 individuals have been screened for diabetes in the 100 participating Primary Healthcare Centres. 265 (5.3%) had abnormal blood sugar levels. 229 of these are being treated at the Health Centres where the diagnosis was made. The treatment comprises counselling on diet and exercise and commencement of oral antidiabetic medications. The rest were referred to higher tier of care due to presence of complications. Discussion Primary healthcare Centres which did not previously have capacity to screen for diabetes are now able to screen for and manage uncomplicated diabetes through the educational intervention and service delivery capacity building engendered by the support received from the World Diabetes Foundation. Empowering Primary healthcare Centres in Nigeria with knowledge and basic diabetes equipment will lead to early diagnosis and therefore reduce the incidence of late presentation with complicated diabetes.

Practical Diabetes Care for Healthcare Professionals, Second Edition, helps healthcare professionals get up-to-speed on type 2 diabetes care. Type 2 diabetes is multifaceted, affecting a person's daily life, family and workplace. Beyond the usual health impact, diabetes may also carry significant psychological burdens. Successful care means whole [person] care which can be daunting for an individual healthcare provider. The complete assessment of people with diabetes must include a review of diabetes medications, blood glucose levels, nutritional intake, physical activity, and stress. Also important is a review of possible micro- and macrovascular complications. This practical guide translates research and evidence-based recommendations into everyday clinical practice, with the goal of helping all members of the healthcare team more effectively manage their diabetic patients. Provides detailed, real-life case scenarios that illustrate the principles outlined in each chapter Includes separate chapters for specific diabetes-related complications Devotes a new chapter to the concept of the Diabetes Health Care Team and its impact on diabetes care Expands on the importance of lifestyle approaches, including a key discussion on the emotional aspects of managing a long-term chronic disease Provides a comprehensive, yet succinct, review of diabetes that includes details on medication choice, dosages, advancements and technological accomplishments

The Diabetes LIFEMAP changes the way chronic diabetes care is delivered forever. The LIFEMAP raises diabetes care for the primary care and ancillary healthcare provider to the level of world renown diabetes expert, David Bleich, MD. For patients, the LIFEMAP provides real-time diabetes care that changes a "tough-to-manage" disease into a shared, personal, and efficient management experience. The LIFEMAP can be used as a stand-alone diabetes management tool or can be combined with our cloud based LIFEMAP platform through GoMo Health. Now care can be delivered seamlessly at home for both provider and patient. The Diabetes LIFEMAP is the playbook for 21st century diabetes care. It starts with an understanding of the basic principles of insulin secretion and moves to a discussion of how the LIFEMAP evolved and why it is such a powerful management tool. Finally, case studies are provided to reinforce basic concepts of LIFEMAP diabetes care with real world examples. Taken together, The Diabetes LIFEMAP succeeds in helping healthcare providers overcome a difficult to manage disease and provides patients with an optimal diabetes outcome with the least amount of effort necessary to achieve high level results.

The American Diabetes Association/JDRF Type 1 Diabetes Sourcebook serves as both an evidence-based reference work and consensus report outlining the most critical components of care for individuals with type 1 diabetes throughout their lifespan. The volume serves not only as a comprehensive guide for clinicians, but also reviews the evidence supporting these components of care and provides a perspective on the critical areas of research that are needed to improve our understanding of type 1 diabetes diagnosis and treatment. The volume focuses specifically on the needs of patients with type 1 diabetes and provides clear and detailed guidance on the current standards for the optimal treatment of type 1 diabetes from early childhood to later life. To accomplish the book's editorial goals, Editors-in-Chief, Drs. Anne Peters and Lori Laffel, assembled an editorial steering committee of prominent research physicians, clinicians, and educators to develop the topical coverage. In addition, a Managing Editor was brought on to help the authors write and focus their chapters.

Intensive diabetes management is the process by which blood glucose levels are closely controlled using multiple daily insulin injections or an insulin pump. Intensive Diabetes Management is geared

toward the health care practitioner who wants to implement this method in his or her patients. Now in its seventh edition, this authoritative text includes the latest advances in research and therapy. The data, guidelines, and procedures reflect the latest positions of the American Diabetes Association's standards of care. Although difficult to maintain, intensive diabetes management has proven very effective and is now the rule, rather than the exception, in diabetes care. People who use this method of diabetes management must be closely aligned with their health care team and highly motivated because it not only requires close scrutiny of blood glucose levels, but also constant monitoring of food intake and medication dosage, among other things. Virtually all patients with type 1 or type 2 diabetes can improve their glycemic control and overall health through intensive diabetes management. Intensive Diabetes Management emphasizes a team approach to patient care and offers guidance in helping patients move toward treatment goals appropriate for their individual skills and medical condition. Individual sections address all of the key topics in intensive diabetes management, including rationale/physiological basis, team approach, education, psychosocial issues, patient selection/goals of therapy, insulin regimens, insulin pump therapy, monitoring, and nutrition management.
