 Does your organization find itself returning to the same problems again and again, never quite solving them? Action learning enables employees to think differently as they seek to solve problems. In "Breakthrough Solutions With Action Learning," Bea Carson explores how action learning can help teams identify the root cause of problems and thus find more appropriate solutions. In addition to solving real problems in a timely manner, action learning teams also discover how to work together. With the support of a coach, team members deliberately identify and build skills that can transfer to other work throughout their careers. In this issue of TD at Work, you will find: · a definition of action learning and how it differs from traditional problem solving · the six components of action learning · an overview of the action learning process · barriers to problem solving · questions to ask when implementing action learning.

The fun and simple problem-solving guide that took Japan by storm Ken Watanabe originally wrote Problem Solving 101 for Japanese schoolchildren. His goal was to help shift the focus in Japanese education from memorization to critical thinking, by adapting some of the techniques he had learned as an elite McKinsey consultant. He was amazed to discover that adults were hungry for his fun and easy guide to problem solving and decision making. The book became a surprise Japanese bestseller, with more than 370,000 in print after six months. Now American businesspeople can also use it to master some powerful skills. Watanabe uses sample scenarios to illustrate his techniques, which include logic trees and matrixes. A rock band figures out how to drive up concert attendance. An aspiring animator budgets for a new computer purchase. Students decide which high school they will attend. Illustrated with diagrams and quirky drawings,

the book is simple enough for a middle-schooler to understand but sophisticated enough for business leaders to apply to their most challenging problems.
