This handbook dicussess tyre-road  
contact forces generated by heavy  
vehicles covering their influence on road  
surface and bridge response and

damage, as well as ways of regulating  
and improving vehicles so as to minimize  
road damage.;The main incentive for  
understanding vehicle-road interaction is  
the possibility of reducing the road  
damage caused by heavy vehicles and  
the very high associated costs. This may  
be achieved by highway authorities,  
through improved design and  
construction of roads; by government  
agencies, through regulations intended  
to encourage the use of more "road-  
friendly" vehicles; or by vehicle  
engineers, through design of improved  
vehicle configurations and suspensions,

which minimize road damage.;The book provides a unified mechanistic approach to the entire subject, covering vehicle dynamics; dynamic tyre forces; weigh-in-motion; pavement and bridge response; damage mechanisms of paving materials; vehicle-guideway interaction; suspension design to minimize road damage; and assessing road damaging potential of vehicles for regulatory purposes. It includes 25 literature reviews, covering topics from asphalt deformation to weigh-in-motion, and citing over 500 references. In addition, it discusses both the fundamental mechanics of the mechanical and civil engineering systems, as well as practical and implementation issues.

This brief Blaster's Guide will provide methods to quickly create general blast designs by: estimating burden, spacing, stemming and subdrilling as well as explosive loads. Charts are available to help explain blast vibration and air overpressure. The new charts provide comparisons of blast vibration and normal environmental vibration as well as air overpressure compared to wind. These charts provide both the laymen and professional with an easy, understandable method to compare blast effects with normal activities and normal environmental phenomena. The first section of the guide will provide a series of tables that, with little effort, can be used to determine average blast design dimensions. Additional forms are also given for blasting plans, seismic

monitoring reports and blasting logs etc. This guide will enable the blaster to estimate dimensions in the field as well as provide the necessary forms for control of blasting operations.

When Philip Swallow and Professor Morris Zapp participate in their universities' Anglo-American exchange scheme, the Fates play a hand, and each academic finds himself enmeshed in the life of his counterpart on the opposite side of the Atlantic. Nobody is immune to the exchange: students, colleagues, even wives are swapped as events spiral out of control. And soon both sundrenched Euphoric State university and rain-kissed university of Rummidge are a hotbed of intrigue, lawlessness and

broken vows...

Good Strategy/Bad Strategy clarifies the muddled thinking underlying too many strategies and provides a clear way to create and implement a powerful action-oriented strategy for the real world. Developing and implementing a strategy is the central task of a leader. A good strategy is a specific and coherent response to—and approach for—overcoming the obstacles to progress. A good strategy works by harnessing and applying power where it will have the greatest effect. Yet, Rumelt shows that there has been a growing and unfortunate tendency to equate Mom-and-apple-pie values, fluffy packages of buzzwords, motivational slogans, and financial goals with

“strategy.” In Good Strategy/Bad Strategy, he debunks these elements of “bad strategy” and awakens an understanding of the power of a “good strategy.” He introduces nine sources of power—ranging from using leverage to effectively focusing on growth—that are eye-opening yet pragmatic tools that can easily be put to work on Monday morning, and uses fascinating examples from business, nonprofit, and military affairs to bring its original and pragmatic ideas to life. The detailed examples range from Apple to General Motors, from the two Iraq wars to Afghanistan, from a small local market to Wal-Mart, from Nvidia to Silicon Graphics, from the Getty Trust to the Los Angeles Unified School District, from Cisco Systems to Paccar, and from Global Crossing to the

2007–08 financial crisis. Reflecting an astonishing grasp and integration of economics, finance, technology, history, and the brilliance and foibles of the human character, *Good Strategy/Bad Strategy* stems from Rumelt's decades of digging beyond the superficial to address hard questions with honesty and integrity.

It creates new markets and directions for a more

reliable, flexible and robust society and empowers the exploration of our world in ever more depth, but it often falls short of our expectations. Current software methodologies, tools, and techniques are still neither robust nor reliable enough for the constantly evolving market, and many promising approaches have so far failed to deliver the solutions required. This book presents the keynote 'Engineering Cyber-Physical Systems' and 64 peer-reviewed papers from the 16th International Conference on New Trends in Intelligent Software Methodology Tools, and Techniques, (SoMeT\_17), held in Kitakyushu, Japan, in September 2017, which brought together researchers and practitioners to share original research results and practical development experience in

software science and related new technologies. The aim of the SoMeT conferences is to capture the essence of the new state-of-the-art in software science and its supporting technology and to identify the challenges such technology will have to master. The book explores new trends and theories which illuminate the direction of developments in this field, and will be of interest to anyone whose work involves software science and its integration into tomorrow's global information society.
