 Using sample administrative and clinical protocols that any hospital can use, this book gives a detailed account of how to set up and run an observation unit and reviews all medical conditions in which observation medicine may be beneficial. In addition to clinical topics such as improving patient outcomes and avoiding readmissions, it also includes practical topics such as design, staffing, and daily operations; fiscal aspects, such as coding, billing, and reimbursement; regulatory concerns, such as aligning case management and utilization review with observation; nursing considerations; and more. The future of observation medicine, and how it can help solve the healthcare crisis from costs to access, is also discussed. Although based on US practices, this book is also applicable to an international audience, and contains instructions for implementing observation in any setting or locale and in any type of hospital or other appropriate facility.

Current Issues and Perspectives on Differentiated Practice

Jones & Bartlett Learning
 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report.

How does the contemporary restructuring of health care affect nursing practice? Increasingly since the 1970s, and more intensively under recent reforms, Canadian health care is the focus of information-supported, professionally based management. In *Managing to Nurse*, Janet M. Rankin and Marie L. Campbell probe the operation of this new form of hospital and its effect management on nurses and nursing. Written from the nurse's perspective, this institutional ethnography discovers a major transformation in the nature of nursing and associated patient care: the work is now organized according to an accounting logic that embeds a cost-orientation into care-related activities. Rankin and Campbell illustrate how nurses adapt to this new reality just as they, themselves, perpetuate it - how they learn to recognize their adaptations as professionally correct and as an adequate basis for nursing judgement. Although *Managing to Nurse* may contradict contemporary beliefs about health care reform, the insiders' account that it provides is undeniable evidence that nurses' caring work is being undermined and patient care is being eroded, sometimes dangerously, by current health care agendas.
