Clint Bolick and Kate J. Hardiman begin with a thought experiment: how would we structure a 21st-century K&-12 school system if we were starting from scratch, attending to contemporary parental needs and harnessing the power of technology? Maintaining that the status quo is unacceptable, they take a forward-thinking look at how choice, competition, deregulation, and

decentralization can create disruptive innovation and reform education for all students. The US Supreme Court proclaimed 65 years ago in *Brown v. Board of Education* that our schools must provide equal educational opportunities, but as Bolick and Hardiman argue we have yet to make good on that promise. School systems are bound to antiquated structures, outdated technology, and bureaucratic systems that work for adults, not children. The COVID-19 pandemic has highlighted how ossified the traditional public school system has become. Today's ruptures in traditional learning create opportunity for reinvention. Unshackled explains that technology can redefine the ways students learn in and out of the classroom and highlights the benefits of expanding educational freedom so that families are able to choose an education that fits their child's needs.

McGraw Hill Professional Research evidence suggests that summer breaks contribute to income-based achievement and opportunity gaps for children and youth. However, summertime can also be used to provide programs that support an array of goals for children and youth, including improved academic achievement, physical health, mental health, social and emotional well-being, the acquisition of skills, and the development of interests. This report is intended to provide practitioners, policymakers, and funders current information about the effectiveness of summer programs designed for children and youth entering grades K-12. Policymakers increasingly expect that the creation of and investment in summer programs will be based on research evidence. Notably, the 2015 Every Student Succeeds Act (ESSA) directs schools and districts to adopt programs that are supported by research evidence if those programs are funded by specific federal streams. Although summer programs can benefit children and youth who attend, not all programs result in improved outcomes. RAND researchers identified 43 summer programs with positive outcomes that

met the top three tiers of ESSA's evidence standards. These programs were identified through an initial literature search of 3,671 citations and a full-text review of 1,360 documents and address academic learning, learning at home, social and emotional well-being, and employment and career outcomes. The authors summarize the evidence and provide detailed information on each of the 43 programs, focusing on the evidence linking summer programs with outcomes and classifying the programs according to the top three evidence tiers (strong, moderate, or promising evidence) consistent with ESSA and subsequent federal regulatory guidance. **Let's Review Regents: Algebra II Revised Edition** John Wiley & Sons

An unconventional book of wisdom and life advice from renowned business school professor and New York Times bestselling author of *The Four* Scott Galloway. Scott Galloway teaches brand strategy at NYU's Stern School of Business, but his most popular lectures deal with life strategy, not business. In the classroom, on his blog, and in YouTube videos garnering millions of views, he regularly offers hard-hitting answers to the big questions: What's the formula for a life well lived? How can you have a meaningful career, not just a lucrative one? Is work/life balance possible? What are the elements of a successful relationship? *The Algebra of Happiness: Notes on the Pursuit of Success, Love, and Meaning* draws on Professor Galloway's mix of anecdotes and no-BS insight to share hard-won wisdom about life's challenges, along with poignant personal stories. Whether it's advice on if you should drop out of school to be an entrepreneur (it might have worked for Steve Jobs, but you're probably not Steve Jobs), ideas on how to position yourself in a crowded job market (do something "boring" and move to a city; passion is for people who

are already rich), discovering what the most important decision in your life is (it's not your job, your car, OR your zip code), or arguing that our relationships to others are ultimately all that matter, Galloway entertains, inspires, and provokes. Brash, funny, and surprisingly moving, *The Algebra of Happiness* represents a refreshing perspective on our need for both professional success and personal fulfillment, and makes the perfect gift for any new graduate, or for anyone who feels adrift.

**Student Discussion Guide** Barrons Educational Series

For students who are intimidated by all forms of math, here is a set of easy steps that lead to an understanding of elementary algebra. The author defines all terms, points out potential pitfalls in algebraic calculation, and makes problem solving a fun activity. New in this edition are painless approaches to understanding and graphing linear equations, solving systems of linear inequalities, and graphing quadratic equations. Barron's popular Painless Series of study guides for middle school and high school students offer a lighthearted, often humorous approach to their subjects, transforming details that might once have seemed boring or difficult into a series of interesting and mentally challenging ideas. Most titles in the series feature many fun-to-solve "Brain Tickler" problems with answers at the end of each chapter.
