CERVANTES BRIGGS

Butterfly Park Wentworth Press

When K-5 students understand how to read text features like bullets, insets, and bold print, they are reading the whole page essential for deep comprehension of non-fiction and fiction text. In *Reading the Whole Page: Teaching and Assessing Text Features to Meet K-5 Common Core Standards*, seasoned educators Michelle Kelley and Nicki Clausen-Grace show you how to explicitly teach K-5 students to read text features, use them to navigate text, and include them in their own writing. The classroom-proven mini-lessons, activities, and assessment tools in *Reading the Whole Page* help you: -Teach relevant Common Core Reading Standards and grade-level expectations; -Diagnose, monitor, and meet student needs with one of two level-appropriate assessments; -Evaluate knowledge with a unique picture book on CD that illustrates all the text features; and - Monitor and guide differentiated instruction with a convenient class profile. Sixty mini-lessons for teaching print, graphic, and organizational features provide ample choices for meeting the standards while adapting to students' needs. Flexible lessons, which follow the gradual release of responsibility model and increase in difficulty, can be used within the typical ninety-minute reading block, during content-area instruction, in small groups, and as part of independent practice opportunities like literacy centers. Each lesson offers concept review, suggestions for differentiation, assessment options, and technology connections, requiring students to find, explore, manipulate, and create text features in their own writing. Even more activities from text feature walks to scavenger hunts help students integrate text feature knowledge as they read. The included CD provides important resources and convenient lesson supports, such as interactive thinksheets that can be filled out directly on the computer, visual examples of each text feature, rubrics, the assessment picture book, and readers' theatre scripts. How to Raise Monarch Butterflies Scholastic Inc.

" ' What was your favorite book as a child?' In more than 10 years of facilitating workshops, we have never heard anyone reply, ' My fourth-grade science textbook.' Clearly, textbooks have an important place in the science classroom, but using trade books to supplement a textbook can greatly enrich students' experience." -- from *Teaching Science Through Trade Books* If you like the popular " *Teaching Science Through Trade Books*" columns in NSTA' s journal *Science and Children*, or if you' ve become enamored of the award-winning *Picture-Perfect Science Lessons* series, you' ll love this new collection. It' s based on the same time-saving concept: By using children' s books to pique students' interest, you can combine science teaching with reading instruction in an engaging and effective way. In this volume, column authors Christine Royce, Emily Morgan, and Karen

Ansberry selected 50 of their favorites, updated the lessons, and added student activity pages, making it easier than ever to teach fundamental science concepts through high-quality fiction and nonfiction children' s books. Just as with the original columns, each lesson highlights two trade books and offers two targeted activities, one for K- 3 and one for grades 4- 6. All activities are Standards-based and inquiry-oriented. From *Measuring Penny* and *How Tall, How Short, How Far Away?* to *I Took a Walk* and *Secret Place*, the featured books will help your students put science in a whole new context. *Teaching Science Through Trade Books* offers an ideal way to combine well-structured, ready-to-teach lessons-- with strong curricular connections-- and books your students just may remember, always.

"Gail Gibbons is known for her ability to bring the nonfiction world into focus for young students. Through pictures, captions, and text, this book provides a window into the world of growing things...Erin Mallon complements Gibbons' s text with a clear, clipped, and purposeful narration." -AudioFile Magazine

Monarch Butterfly Royal Mail Children's Press

"An explanation of life cycles of different types of plants and animals, as well as people"--Provided by publisher.

The Very Impatient Caterpillar (Butterfly Series) Frances Lincoln Children's Books

This book basically involves the study of flight parameters, wing beat frequency, moment of inertia, and wing movements for developing various aerodynamic forces which have been calculated. The book is intended for biologists, physicists, nanotechnologists, and aerospace engineers. Resilin, an elastic polymer (4 λ) which is present at the base of insect, plays a major role in Neurogenic and Myogenic insect flyers and influences the physiology of flight muscles. Leading edge vortex (LEV) is a special feature of insect flight. Insect wings have stalling angle above 60 degrees as compared to a man-made aeroplane stalling angle which is 16 degree. Reynolds number, the knowledge of LEV, and detailed study of moment of inertia help in developing flapping flexible wings for micro-aerial-vehicles. This book serves as an interface between biologists and engineers interested to develop biomimicking micro-aerial-vehicles. The contents of this

book is useful to researchers and professionals alike.

Waiting for Wings Capstone

"How can you enhance the quality and effectiveness of instruction in both the content areas and in writing? By integrating content in both social studies and science with the strategies of writing that are so important for students to master as they craft nonfiction.

This book shows teachers how to use mentor texts in an integrative approach for teaching both content and informational writing. As you explore the pages of this book, you'll find strategies for teaching writing craft fundamentals with step-by-step instructions that make writing instruction come alive in content-area classes. Models make the instructional strategies clear. The book also includes a variety of expository techniques and advice on preparing writers for success on performance-based tests."

COMP SCIENCE OF FLY FISHING & I Am a Butterfly Using dazzling and detailed photographs, "I Am a Butterfly" teaches the main stages of metamorphosis from the point of view of the butterfly, which is both educational and entertaining. A monarch butterfly faces metamorphosis, overcomes her fear of the dark chrysalis, and takes flight with beautiful new wings. Big changes, no matter how scary at first, can bring new friends and new opportunities filled with delicious nectar. Resources and action points provide many ways to become actively engaged in protecting the monarch butterfly population at home or at school. Readers will learn how to attract monarchs to their own backyard, which is great fun and can help grow back the endangered monarch butterfly population. Although perfect for teachers, parents, kids, and monarch butterfly lovers, adults can also relate to the butterfly's big changes and be reminded that after the dark scary chrysalis come the beautiful wings. "I Am a Butterfly" includes: * Beautiful photos of each stage of metamorphosis* Ideas to attract monarchs to your school or backyard* Resources to protect monarch butterflies* Internet links for butterfly research* A life cycle diagram* Fun facts about butterflies* Opportunities to discuss life skills You're a butterfly, too. Reading the Whole Page Describes the life cycle of a butterfly from egg, larva, pupa to adult, its feeding habits, reproduction, and migration.

Nonfiction Writing Strategies Using Content-Area Mentor Texts Princeton University Press

Understand the value of connecting animals and children From

family pets and wild animals to toys, stuffed animals, and media images, animals are a central part of every child's landscape. This book examines the reasons why children should interact and connect with real animals, and it identifies the rich learning that results. You'll find heaps of foundational support and practical ideas to create authentic experiences that bring children and all kinds of species of animals together—including many adaptations if live animals are not permitted in your setting. Connecting Animals and Children in Early Childhood Examines the basic qualities that make animals so appealing to children Explains how animals impact children's cognitive, social-emotional, and inter- and intrapersonal development and growth Includes an overview of the many ways animals are present in children's lives Introduces authentic experiences with animals that are supportive of children's understanding and learning, and respectful to both animals and people Provides real-life examples of how to bring animals into your classroom with suggestions for planning, ideas for finding the right pet, and resources for making experiences meaningful, relevant, and joyful for children Patty Born Selly is executive director of the National Center for STEM Elementary Education at St. Catherine University in St. Paul, Minnesota. As the founder of Small Wonders, an educational consulting company offering services to schools, faith-based communities, and other organizations, Patty has developed hundreds of classes to help programs incorporate nature, science, and green education.
