Originally published in 1989, school psychology, according to the contributors of this unique volume, is an approach to problem solving, not simply a setting-specific profession. Following Lightner Witmer's original notion, the editors lay a foundation for the field of school psychology in "nontraditional" settings. Such nontraditional practice stems from data showing that school psychologists display skills and abilities that can be applied successfully to a variety of client needs in numerous settings. This special book directly affects both the practicing school psychologist and those in training, as well as professionals and students in clinical child psychology, counseling, and educational psychology.

Psychology's formal interaction with law began early in the twentieth century, though little in the way of substantive scholarly and professional development occurred until several decades later. The emergence of psychology and law as a modern field of scholarship was marked by the founding of the American Psychology-Law Society (AP-LS) in 1969, now approaching its 50th anniversary. The scientific foundation upon which the modern field now rests was established by a small group of psychological researchers, legal scholars, and clinicians. The Roots of Modern Psychology and Law: A Narrative History reveals how the field developed during the first decade following the founding of the American Psychology-Law Society. The contributors to this edited volume, widely considered to be among the "founders" of the field, were responsible for establishing and nurturing many of the subfields and topics in psychology and law or forensic psychology that flourished across the next fifty years. In each chapter, these leaders explain in narrative form how and why the field and the Society developed in its early years through the recounting of key professional events in their careers during the 1970s. In some cases this was their first major research study using psychology applied to legal issues. In others it was their development of seminal ideas or organizational innovations that had a later impact on the field's development. The volume chronicles how an emerging AP-LS and field of psychology and law were shaped by these psychologists, and how their own initial work was, in turn, shaped by the organization.

That which does not kill us makes us stronger. (Nietzsche) The phenomenon of positive personal change following devastating events has been recognized since ancient times, but given little attention by contemporary psychologists and psychiatrists, who have tended to focus on the negative consequences of stress. In recent years, evidence from diverse fields has converged to suggest the reality and pervasive importance of the processes the editors sum up as posttraumatic growth. This volume offers the first comprehensive overview of these processes. The authors address a variety of traumas--among them bereavement, physical disability, terminal illness, combat, rape, and natural disasters--following which experiences of growth have been reported. How can sufferers from posttraumatic stress disorder best be helped? What does "resilience" in the face of high risk mean? Which personality characteristics facilitate growth? To what extent is personality change possible in adulthood? How can concepts like happiness and self-actualization be operationalized? What role do changing belief systems, schemas, or "assumptive worlds" play in positive adaptation? Is "stress inoculation" possible? How do spiritual beliefs become central for many people struck by trauma, and how are posttraumatic growth and recovery from substance abuse or the crises of serious physical illnesses linked? Such questions have concerned not only the recently defined and expanding group of "traumatologists," but also therapists of all sorts, personality and social psychologists, developmental and cognitive researchers, specialists in health psychology and behavioral medicine, and those who study religion and mental health. Overcoming the challenges of life's worst experiences can catalyze new opportunities for individual and social development. Learning about persons who discover or create the perception of positive change in their lives may shed light on the problems of those who continue to suffer. Posttraumatic Growth will stimulate dialogue among personality and social psychologists and clinicians, and influence the theoretical foundations and clinical agendas of investigators and practitioners alike.
