Why do so many strategic plans end up collecting dust? Organizational leaders feel they should have good plans - and they are right. Private firms, government agencies and non-profits are all facing an uncertain future, whether the task is to impress potential investors, chart a path towards profitability, or fight for funding.

Moreover, lack of planning is shown to be among the top reasons for business failure. And yet strategic planning, if done at all, is often a bland re-hash of familiar issues. It is frustrating when prepared plans set high expectations, but then are not even implemented. Embarrassingly, the effort has produced nothing but a dust collector. I have seen this problem first hand - and solved it - not only as a consultant, but as a senior manager in public and private settings. I facilitated the effective implementation of organization-wide risk management programs (praised by the provincial Auditor General). As innovation specialist and director of strategic planning, I helped lead a manufacturing firm to win

the Chamber of Commerce Business of the Year Award. It was knowledge hard won. After years of study, field research and dozens of client engagements, I finally arrived at a refined and careful method, and formulated it for publication to share with others. I am convinced: planners must follow a structured method that takes into account not only the different types and purposes of planning (a distinction rarely made!) but also the principles of effective program implementation. These success factors are proven in studies, but do not seem to be part of management training. And yet strategic planning, properly done and executed, can transform the culture and propel the organization to success. Using this book, you will: - gain clarity about exactly what you're trying to plan, instead of mixing up types of plans; - focus the discussion and streamline the process; - feel confident that your planning steps are in the right order; - engage managers and staff, build teams, and transform a negative culture; - conquer the "implementation gap", link to the real business,

and reverse program failure. This book is a fast read, 70 pages, complete with diagrams; templates; references; quotes from industry practitioners; and index. Starting with an iron-clad positive case for doing strategic planning, I then show the practical steps. Take my advice, too, on the role of the planning champion and how to facilitate the process. If you can organize and chair meetings, and if you are motivated to move the organization ahead, you can do this! Strategic Planning: Process, Templates, and Effective Implementation lists lower than the average price in the strategic planning category. Show your colleagues, staff and competitors you can do strategic planning the way it should be done. Order it and start planning for success!

Rapid globalization coupled with the growth of the Internet and Information Technology (IT) has led to a complete transformation in the way businesses or organizations function today. This has not only affected the management culture but has also led to an increase in competition in terms of markets and resources. Businesses have become more customer-driven and e-business is gaining popularity. Traditional means of communication/correspondence have given way to online dealings, e-mails and chats. With such a

radical shift in the approach to doing business, came the need for specialized systems to handle the various departments and functions in an organization. Management Information System or MIS is an organized and well-structured system used by organizations for the collection, storage, processing and dissemination of data in the form of information that facilitates the smooth functioning of the organization.

Management information systems involve three primary resources: people, technology and information or decision-making. It is in this context, a textbook on introduction to the subject of MIS is presented to the students of Management program. The book contains the syllabus from basics of the subjects going into the intricacies of the subjects. All the concepts have been explained with relevant examples and diagrams to make it interesting for the readers. An attempt is made here by the experts to assist the students by way of providing case based study material as per the curriculum with non-commercial
