SIGNS OF SHARING is a unique set of materials that provides educators whose responsibilities include the integration of hearing-impaired children, with a multifaceted tool to teach sign language and deaf awareness. Included is an initial section on mainstreaming deaf children in regular classrooms which is followed by a section on deaf awareness that provides complete information, goals, necessary materials, and step-by-step activities for a class to learn by the

hands-on approach. The main section of the book is a complete teacher's guide to teach sign language to preschool through third grade students in classrooms and organizations. There are 28 lessons designed to provide creative, exciting, and fun ways to learn and use sign language. Each lesson includes a list of signs to be introduced, materials needed, and numerous activities to present and practice the signs. Each lesson contains sign cards, sign sheets, and activity or song sheets. Suggestions for the use of these materials are given in each lesson. The lessons are arranged to follow the natural progression of a school year. The drawings used to teach the signs are appealing, clear, easy to understand depictions of multicultural children, thus creating a child-oriented curriculum for learning about the world of deafness.

Deaf people are usually regarded by the hearing world as having a lack, as missing a sense. Yet a definition of deaf people based on hearing loss obscures a wealth of ways in which societies have benefited from the significant contributions of deaf people. In this bold intervention into ongoing debates about disability and what it means to be human, experts from a variety of disciplines—neuroscience, linguistics, bioethics, history, cultural studies, education, public policy, art, and architecture—advance the concept of Deaf Gain and challenge assumptions about what is normal. Through their in-depth articulation of Deaf Gain, the editors and authors of this pathbreaking volume approach deafness as a distinct way of being in the world, one which opens up perceptions, perspectives, and insights that are less common to the majority of hearing persons. For example, deaf individuals tend to have unique capabilities in spatial and facial recognition, peripheral processing, and the detection of images. And users of sign language, which neuroscientists have shown to be biologically equivalent to speech, contribute toward a robust range of creative expression and understanding. By framing deafness in terms of its intellectual, creative, and cultural benefits, Deaf Gain recognizes physical and cognitive difference as a vital aspect of human diversity.
