NIXON RIVAS

Megachurch Accountability in Missions: William Carey Publishing
A detailed look into ancient advanced technology, science, and
medicine--some of which has yet to be reproduced today •
Explores countless examples of ancient high tech, including
robotics, artificial intelligence, aircraft, solar-powered cannons,
high-speed drills, illuminated underground temples, massive
refrigerators, and subterranean cities • Examines evidence of
advanced medicine in ancient times • Includes examples from
ancient Egypt, China, Greece, Babylon, Siberia, the Americas, and
India The first self-igniting match was invented in 1805 by Jean

Chancel, a French chemist. Yet, in Babylon, 3,600 years before,
identical sulfur matches were in common use. On the
Panchavarnaswamy Temple in India, built millennia ago, there is
a detailed carving of a man on a bicycle, yet the bicycle wasn't
invented in the modern world until 1817. These inventions are
only two examples of technology lost in the Dark Ages. Exploring
the sophisticated tech achieved by ancient civilizations hundreds
and thousands of years ago, Frank Joseph examines evidence of
robotics and other forms of artificial intelligence; manned flight,
such as hot-air balloons and gliders; and military science,
including flamethrowers, biological warfare, poison gas, and
solar-powered cannons. He reveals how ancient construction
engineers excavated subterranean cities, turned stone walls into
glass, lifted 100-ton blocks of granite, illuminated underground

temples and pyramids, and stored their food in massive refrigerators. Examples explored in the book include the first known alarm clock, invented by Plato in 4th-century-BC Greece; 600-year-old Aztec whistles that reproduce animal sounds and human voices with uncanny accuracy; Stone Age jewelry from Siberia worked by a high-speed drill; sex robots in ancient Troy, Greece, and China; ancient Egyptian aircraft; and India's iron pillar exposed to sixteen hundred years of monsoons but still standing rust-free. The author also explores evidence of advanced medicine in ancient times, particularly in Egypt and China, from brain surgery, optometry, and prosthetics to dentistry, magnet therapy, and cancer cures. By examining the achievements of our ancient ancestors, we can not only reverse-engineer their inventions but also learn from their civilizations' mistakes, enabling us to avoid more dark ages. Imagine how scientifically advanced humanity would be if our early achievements had escaped destruction and been allowed to develop?

Digital Culture Catapult

In this fascinating look at the race to secure the global food supply, environmental journalist and professor Amanda Little tells the defining story of the sustainable food revolution as she weaves together stories from the world's most creative and controversial innovators on the front lines of food science, agriculture, and climate change. Climate models show that global crop production will decline every decade for the rest of this century due to drought, heat, and flooding. Water supplies are in jeopardy. Meanwhile, the world's population is expected to grow another 30 percent by midcentury. So how, really, will we feed

nine billion people sustainably in the coming decades? Amanda Little, a professor at Vanderbilt University and an award-winning journalist, spent three years traveling through a dozen countries and as many U.S. states in search of answers to this question. Her journey took her from an apple orchard in Wisconsin to a remote control organic farm in Shanghai, from Norwegian fish farms to famine-stricken regions of Ethiopia. The race to reinvent the global food system is on, and the challenge is twofold: We must solve the existing problems of industrial agriculture while also preparing for the pressures ahead. Through her interviews and adventures with farmers, scientists, activists, and engineers, Little tells the fascinating story of human innovation and explores new and old approaches to food production while charting the growth of a movement that could redefine sustainable food on a grand scale. She meets small permaculture farmers and "Big Food" executives, botanists studying ancient superfoods and Kenyan farmers growing the country's first GMO corn. She travels to places that might seem irrelevant to the future of food yet surprisingly play a critical role--a California sewage plant, a U.S. Army research lab, even the inside of a monsoon cloud above Mumbai. Little asks tough questions: Can GMOs actually be good for the environment--and for us? Are we facing the end of animal meat? What will it take to eliminate harmful chemicals from farming? How can a clean, climate-resilient food supply become accessible to all? Throughout her journey, Little finds and shares a deeper understanding of the threats of climate change and encounters a sense of awe and optimism about the lessons of our past and the scope of human ingenuity.

Policy & Politics in Nursing and Health Care - E-Book Elsevier

Health Sciences

Fight back against a modern culture that is rewiring our brains and damaging our health with this practical, doctor-approved plan for healing that includes a ten-day boot camp and forty delicious recipes. Contemporary life provides us with infinite opportunities, along with endless temptations. We can eat whatever we want, whenever we want. We can immerse ourselves in the vast, enticing world of digital media. We can buy goods and services for rapid delivery with our fingertips or voice commands. But living in this 24/7 hyper-reality poses serious risks to our physical and mental states, our connections to others, and even to the world at large. *Brain Wash* builds from a simple premise: Our brains are being gravely manipulated, resulting in behaviors that leave us more lonely, anxious, depressed, distrustful, illness-prone, and overweight than ever before. Based on the latest science, the book identifies the mental hijacking that undermines each and every one of us, and presents the tools necessary to think more clearly, make better decisions, strengthen bonds with others, and develop healthier habits. Featuring a 10-day bootcamp program, including a meal plan and 40 delicious original recipes, *Brain Wash* is the key to cultivating a more purposeful and fulfilling life.

Crowned in Promise Simon and Schuster

Digital technology has changed the parenting territory dramatically in recent years. Suddenly we've been tasked with preparing kids to be safe, happy and successful, not just in the real world, but in the online world as well. Martine Oglethorpe is part of a new breed of parenting educator who nimbly stays abreast of technology changes while keeping one foot firmly

grounded in the timeless ways that make families strong. Martine skilfully combines her professional expertise with the lived experience gained by guiding her own children down the pathway to being skilled, savvy digital citizens. In these pages lies the blueprint for parenting kids in the digital age. It shares how to be engaged in the digital lives of our children without being overbearing or burdensome; to know when to tread lightly as a parent and when care and caution need to be taken.

In an effort to set the Southbound Fastest Known Time record on the Pacific Crest Trail, Jessica Pekari sets off on an adventure to hike from the Canadian border to the Mexican border. Pekari is an ultrarunner and used to pushing her body to its limits, but the challenges she faces on the trail test both her physical and mental endurance.

Cyberpsychology in the Tech-Fed Virtual World Kyle Books

Brian J. Walsh and J. Richard Middleton offer a vision for transforming economics, politics, technology and every part of contemporary culture.

The Fate of Food Harmony

In this witty, often terrifying work of cultural criticism, the author of *Amusing Ourselves to Death* chronicles our transformation into a Technopoly: a society that no longer merely uses technology as a support system but instead is shaped by it—with radical consequences for the meanings of politics, art, education, intelligence, and truth.

Policy & Politics in Nursing and Health Care Del Rey

We breathe around 17,000 times a day - so it's something that we can all improve for better health and wellbeing - no equipment or fancy fitness gear necessary. Aimee's simple and accessible exercises are designed to fit into your life - from 2 minutes in the shower to 5 minutes at your desk to be at your best before an important meeting. Introducing breath basics and detailing why breathing properly is so important for health and wellbeing, Aimee's simple, practical exercises easily fit into a busy day. Organised into sections reflecting how we spend our time - from work to sleep and eating to relationships - there are breathing exercises for the office, including how to calm your nerves before a big pitch; how our breathing has been affected by technology and how to counteract 'tech apnea', alongside breathing for better relationships, such as exercises to help clear the air after an argument. Also including breaths to help you perform at your exercise peak and enhance digestion, alongside practical tips such as the top 10 plants to purify the air in your home.

Beyond The Horizon Routledge

Technology Is a Useful Servant But a Dangerous Master. -

Christian Lous Lange

The Modern Parent Taylor & Francis

As insightful and wise today as it was when originally published in 1954, Jacques Ellul's *The Technological Society* has become a classic in its field, laying the groundwork for all other studies of technology and society that have followed. Ellul offers a penetrating analysis of our technological civilization, showing how technology—which began innocuously enough as a servant of humankind—threatens to overthrow humanity itself in its

ongoing creation of an environment that meets its own ends. No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book. "A magnificent book . . . He goes through one human activity after another and shows how it has been technicized, rendered efficient, and diminished in the process."—Harper's "One of the most important books of the second half of the twentieth-century. In it, Jacques Ellul convincingly demonstrates that technology, which we continue to conceptualize as the servant of man, will overthrow everything that prevents the internal logic of its development, including humanity itself—unless we take necessary steps to move human society out of the environment that 'technique' is creating to meet its own needs."—The Nation "A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception, subverting and suppressing these values to produce at last a monolithic world culture in which all non-technological difference and variety are mere appearance."—Los Angeles Free Press

What Are People For? WaterBrook

"Escape the pace. Life's not a race." —Lisa Rickwood

Sophisticated technologies and social media have caused our lives to become more complex and stressful. When we are constantly connected digitally, it causes us to become so disconnected and distracted that we forget to live in the present moment. Yet everything in nature takes a break, so why shouldn't we? In a fun reference manual, certified life coach Lisa Rickwood relies on her experience guiding her clients from chaos

to calm to share personal stories, activities, and valuable insight that lead others on a journey within to discover how they, too, can step away from technology to find a renewed focus, feel energized and motivated, and create more balance every day, no matter how busy life becomes. Others will learn how to set clear technology boundaries, make healthy choices, embrace the act of doing nothing, practice mindfulness meditation, schedule quiet time, pursue artistic expression, and much more. Tech-Free Vacations for Your Busy Life offers guidance and insight that will help anyone add more energy and newness to life through fun, non-tech activities that encourage positivity, one mini-vacation at a time.

Breathe Well BoD – Books on Demand

This book investigates the real process of unleashing the power of Information and Communications Technology (ICT) through Open Innovation and strategic choices. It covers the most important aspects of ICT in a nutshell and details the road to the future through business innovation. ICT, of which telecom and IT constitute the core, is currently permeating and transforming every sphere of life, ranging from commerce, manufacturing, education and healthcare, to agriculture, banking, governance, media and entertainment. Today, telecommunication and ICT, in general, are essential to a country's economic development and competitiveness as recognized both by the World Bank and the Asian Development Bank. Due to the powerful, disruptive and rapid forces unleashed by ICT tsunami, organisations not only struggle to harness the potential of ICT but can also be overwhelmed by the changes, complexity, competition and regulatory environment it brings up. This book provides a clue to

organisations on how to sustain and succeed by leveraging ICT in absence of extensive in-house expertise across the breadth and depth of these areas. The driving theme of the book is about opening up organizational and business models, by presenting an integrated roadmap to a future with ICT, by co-opting, cooperating and competing with other organisations.

Constructing the right strategy and building the necessary social capital for open innovation through collaboration with partners, government, academia and users (Quadruple Helix Model) are essential steps in such a process.

Technology Is a Useful Servant But a Dangerous Master. - Christian Lous Lange Springer

Your All-in-One Guide to the Digital World KEY FEATURES ●

Includes basic concepts about computer hardware and software, device connections, and the Internet. ● Solutions on how to get the most out of emails, office suites, photos, videos, and maps. ● Insights on social media, e-commerce, digital payments, and online booking. DESCRIPTION Technology touches our lives in many different ways. In this book, we will explore the common uses of technology in the world around you, demystify the concepts, and explain its usage. The book begins by making you comfortable with your Windows PC and Android Smartphone/Tablet. It discusses the Internet and common device connections. It also delves into popular productivity applications like emails, documents, spreadsheets, presentations, maps, photos, music, and videos. Usage of free apps from Google is demonstrated. The book also talks about social media and online tools which allow you to connect and communicate with people on the Internet, with examples from Facebook, Twitter,

Instagram, and WhatsApp. The different facets of e-commerce are discussed as well, namely, payments, online shopping, tracking, reviews, and online travel booking, along with examples from popular shopping and travel websites. It explores newer trends like cloud computing, media players, and voice assistants. Security and privacy best practices are also covered for each topic. This book is an attempt to break down the barriers that stand between you and the digital world and enable you to embrace technology. By the end of this book, you'll find yourself more tech-savvy than you were when you started.

WHAT YOU WILL LEARN

- Day-to-day tasks on your Windows PC, Android Smartphone, and the Internet.
- Usage of popular Google services, including Gmail, docs suite, and YouTube.
- Usage of Facebook, Twitter, Instagram, Hangouts, and WhatsApp.
- Learn how to shop, pay and book flights, hotels, buses, and trains online.
- Learn about Media Players and usage of Google Assistant.
- Stay secure with best practices for your devices and the internet.

WHO THIS BOOK IS FOR This book is for students, parents, kids, senior citizens, housewives, and any person who wants to get acquainted with the essential skills for the digital era and wants to become comfortable with technology, smart devices, and internet applications. To get the best out of this book, you must have either a Windows 10 PC or an Android Smartphone/Tablet, and stable Internet access.

 Summing it up

The Veldt Little, Brown Spark

This book examines the work of the World Trade Organization (WTO), with a focus on the capacity of its judiciary to strike a reasoned balance between free trade in biotechnology and biosafety as to promote the 2030 Agenda for Sustainable Development and its Sustainable Development Goals. By adopting an innovative interpretation of the precautionary principle and proportionality analysis, the work offers normative suggestions to develop what the author terms “a constructive bridge of knowledge” between decision-makers, scientists, social experts and expert witnesses, which can support a judicial balance by design rather than by chance. Biotechnology is sometimes regarded as a panacea for modern-day challenges, such as feeding a growing world population and counteracting climate-change problems, and a means of offering significant economic opportunities. However, biotechnology can present uncertain, though serious, risks to human health and the environment (i.e., biosafety). Trading biotech products magnifies these risks and benefits globally. This book explores the topical, though still underexplored, question of how to find a point of equilibrium between the revolutionary advancement offered by technology and the need to safeguard biosafety from uncertain, though potentially irreversible, technology risks. It offers a thorough analysis of normative, judicial and epistemic issues hindering a reasoned balance between trade and non-trade interests under the WTO. The work offers practical relevance for the resolution of legal disputes in contexts of uncertainty, as well

as innovative theoretical contributions. It will be a valuable resource for policymakers working on precautionary governance and management, scholars in the areas of trade law, human rights law and environmental law, law students and practitioners, as well as NGOs working in the field of new technologies, biosafety, sustainability and food safety.

Business Innovation and ICT Strategies Balboa Press

In our progressively changing environment, it is of crucial importance to deepen our understanding of peace between people and how leadership can enhance that by 'leading for peace'. This book proposes a useful framework for all leaders (including business, political leaders and peace developers) on how to attain peace between people. The book is presented in four sections: 1. Peace leadership in perspective: Discussions on the nature and meaning of peace leadership, important building blocks for peace leadership (emotional, social and communal intelligence), and a peace leadership-in-action model (which forms the basis of the book). 2. Implementation strategies focus on lead self, lead with others and lead communities. Lead self includes: leading peace through self, others and the community, the role of wisdom and spirituality in leading self and others, and individual, social and cultural inertia preventing humanity from attaining peace. Lead others includes: leadership theories which support peace leadership, the improvement of cultural intelligence amongst peace leaders, and women's role in peace building. Lead communities includes: peace leadership in the public and private sectors, healthcare for the vulnerable and its meaning and contribution towards peace leadership, and working from helplessness to serving the community. 3. Tools and

initiatives to become a highly effective peace leader, including information and communication technological innovations for peace leaders and sport as a tool for peace building. 4.

Concluding thoughts. Concluding thoughts are given, with the emphasis on what we have learned and looking ahead. This editorial book provides a significant contribution within the emerging peace leadership discipline as the international community, non-governmental organisations, and the public and private sectors struggle to formulate sustainable peace initiatives at the tribal, local and communal societal level.

The Technological Society eBook Partnership

Ranging from America's insatiable consumerism and household economies to literary subjects and America's attitude toward waste, here Berry gracefully navigates from one topic to the next. He speaks candidly about the ills plaguing America and the growing gap between people and the land. Despite the somber nature of these essays, Berry's voice and prose provide an underlying sense of faith and hope. He frames his reflections with poetic responsibility, standing up as a firm believer in the power of the human race not only to fix its past mistakes but to build a future that will provide a better life for all.

Planet on Drugs Vintage

Are you in search of a road to reach the most sought-after destination of happiness, peace and contentment? If so, your search may end here. This handy guide gives a decisive direction to the destination ultimate. Everyday human problems are discussed with suggested solutions in eighteen chapters, divided into three sections. The glimpses of human life span are viewed within the backdrop of the Nature's four seasons. Part A deals

with the major engagements such as stages of growth, education, family, work, retirement and old age of an individual. Part B examines daily challenges of life such as fear, negative thoughts, reluctance to forgive, continuous stress, our inability to meditate and exploring solutions thereon. The topics of God, religion and spirituality, Simplicity and detachment, dangers of living in debt, health and happiness are discussed in depth. Part C vividly discusses interpersonal relations, technology, personal counselling, and women's safety. The book, fortified with enduring wisdom of ages, serves as a distinct guidepost of life's journey, to be read and preserved for generations. As the basic human problems everywhere are identical, its relevance is inter-generational and global. Future generation will find this as the saga of their legacy.

In Beyond Disruption: Technology's Challenge to Governance,

George P. Shultz, Jim Hoagland, and James Timbie present views from some of the country's top experts in the sciences, humanities, and military that scrutinize the rise of post-millennium technologies in today's global society. They contemplate both the benefits and peril carried by the unprecedented speed of these innovations—from genetic editing, which enables us new ways to control infectious diseases, to social media, whose ubiquitous global connections threaten the function of democracies across the world. Some techniques, like the advent of machine learning, have enabled engineers to create systems that will make us more productive. For example, self-driving vehicles promise to make trucking safer, faster, and cheaper. However, using big data and artificial intelligence to automate complex tasks also ends up threatening to disrupt both routine professions like taxi driving and cognitive work by accountants, radiologists, lawyers, and even computer programmers themselves.

The Future Is Yours Springer

For a wide variety of reasons, colleges and universities have increased their online course offerings. These programs, including both formal degree programs as well as non-credit and leisure learning options, rely on students to engage with their faculty members as well as other learners to maximize their class experiences. Virtual learning, however, can be a difficult space to create community and resulted in the need to explore how community and culture can be constructed in the virtual, tech-fed world. The model presented here consists of five key elements that program administrators, instructional designers, and teaching faculty must all take into consideration as they develop

their courses.
