**Commerical Pilot Practical Test Standards for Helicopter** Private Pilot Airman Certification Standards - Airplane The Airman Certification Standards (ACS) is the guide for aviation students, instructors, and FAA-designated examiners to know what pilot and industry license

applicants must know, do, and consider for their FAA Knowledge Exam and practical (checkride) to earn a certificate or rating. The new ACS (effective June 2016) replaces the Practical Test Standards (PTS) and it is basically an enhanced version of the PTS. It adds task-specific knowledge and risk management elements to each PTS "Area of Operation" and "Task." The result is a presentation that integrates the standards for passing both the FAA Knowledge Exams and the FAA Oral and Practical Exams in a way that coordinates the study and learning for both, making them relevant to each other. This Federal Aviation Administration (FAA) Private Pilot - Airplane ACS provides the aeronautical knowledge, risk management, and flight proficiency standards for private pilot certification in the airplane category, single-engine land and sea, as well as multi-engine land and sea classes (ASEL, ASES, AMEL, AMES). This ACS incorporates and supersedes the previous Practical Test Standards (FAA-S-8081-14), for "Private Pilot - Airplane" license applicants. The Complete Private

 The purpose of this book is to provide new pilots with a source of readily available information and act as a resource for instructors to transfer knowledge and visualize flight maneuvers. The information is intended to be found quickly when needed. Private Pilot Handbook is a reference book and has been developed specifically for those interested in acquiring or in need of a flight review for a Private Pilot License (PPL). Private Pilot Handbook covers a range of subject matters associated with Private Pilot Airman Certification Standards (ACS), Maneuvers, Oral/Written/Practical Exam Guide, VFR Communication Practices, ATC, and Comprehensive Private Pilot Glossary. Private Pilots must become familiar with continuously changing regulations and procedures. The Private Pilot Handbook is designed for student pilots, ground instructors, flight instructors, and others with a special interest in aviation. The main topics in private pilot training are briefly explained on a need-to-know basis, while topics

students frequently have the most difficulty in are given in detail. Every pilot should be familiar with and use the current FAR- AIM, Pilot Operation Handbook (POH), and Aircraft Flight Manual (AFM). The main sources used in the preparation of the Private Pilot Handbook are the aviation publications stated in the Airmen Certification Standards (ACS) in Figure 2B. For testing guidance, "underlined text and notes" cover questions asked in the written and practice exams.

This ACS incorporates and supersedes FAA-S-ACS-7, Commercial Pilot - Airplane Airman Certification Standards. [Instrument Oral Exam Guide](#) Independently Published  
The Federal Aviation

Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification

system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances

aviation safety at every level of the airman certification system.
