Although most people have heard of laser-cut and 3-D printed model railway parts and kits, most modellers have little knowledge or experience of them. This fascinating and well-illustrated book describes in non-technical language how these machines work and how railway modellers can use them to produce remarkable models for their layouts. With reference to the different modelling scales, the author discusses in detail the advantages and disadvantages of different types of machines, and the materials they employ. He also shows how beginners can install and use 'Sketchup Make', a free CAD (Computer Aided Design) program from the Internet. With step-by-step instructions and accompanying photographs, the author takes the modeller through the early stages of using this program before providing many examples of how to design model railway related items such as laser-cut roofing tiles, palisade fencing, brickwork, and the detailed elements of station awning. In addition, he demonstrates how to create 3-D printed furniture, barrels, packing crates, guttering and down pipes, rivet heads, and a workman's hut. The CAD skills learnt whilst following the clear instructions on how to draw these examples will enable modellers to design their own model railway parts, which can either be produced on their own machines or be sent away to be created by one of the many 'bureau' companies. Clear step-by-step instructions are given along with over 430 superb colour images.

It's time for home gardeners to rethink the traditional garden and explore the wide variety of options for growing edibles in "anywhere" gardens—from decorative pots and raised beds to unusual growing bags, hanging pouches, and tomato rings. These contained gardens are more manageable than long rows or plots and require much less work—yet yield just as much bounty. Featuring dozens of preplanned planting recipes, based on space or container sizes, *Edible Spots and Pots* allows readers to mix and match vegetables, herbs, small fruits, and edible flowers to create a plant-style patchwork based on the "thriller" (dramatic, focal-point plants), "filler" (midheight, bushy plants), and "spiller" (vines and twining plants) formula for creating interesting and botanically sound gardens. Plot-free gardening offers practical solutions for any circumstance a gardener may encounter (challenging spaces, soils, or weather), while also taking into account budget, time, and aesthetic goals. Author Stacey Hirvela shares many other interesting concepts, like One-Minute

Veggies (foods that go from patio to plate in less than a minute) Doubly Delicious Crops that give two flavors from one plant, and space/yield ratios (vegetables worth their footprint). Gardeners will also find an enticing array of 60 edibles that grow well in a defined space for productivity and beauty.
