The three-volume set LNCS 3514-3516 constitutes the refereed proceedings of the 5th International Conference on Computational Science, ICCS 2005, held in Atlanta, GA, USA in May 2005. The 464 papers presented were carefully reviewed and selected from a total of 834 submissions for the main conference and its 21 topical workshops. The papers span the whole range of computational science, ranging from numerical methods, algorithms, and computational kernels to programming environments, grids, networking, and tools. These fundamental contributions dealing with computer science methodologies and techniques are complemented by papers discussing computational applications and needs in virtually all scientific disciplines applying advanced computational methods and tools to achieve new discoveries with greater accuracy and speed.

Firms are collecting and analyzing customer data at an ever increasing rate in response to evidence that data analytics (precision targeting, improved selling) generates a positive return. Yet efforts often ignore customers' privacy concerns and feelings of vulnerability with long-term effects on customers' trust, relationships, and ultimately financial performance. Big data, privacy, and cybersecurity often is relegated to IT and legal teams with minimal regard for customer relationships. This book fills the void by taking a customer-centric approach to privacy. It offers both defensive and offensive marketing-based privacy strategies that strongly position firms in today's data-intensive landscape. The book also helps managers anticipate future consumer and legislative trends. Drawing from the authors' own work and extant research, this book offers a compelling guide for building and implementing big data- and privacy-informed business strategies. Specifically, the book:

- -Describes the

- consumer psychology of privacy
- -Deconstructs relevant legal and regulatory issues
- - Offers defensive privacy strategies
- - Describes offensive privacy strategies
- Provides an executive summary with the Six Tenets for Effective Privacy Marketing

This book will be useful to managers, students, or the casual reader who is interested in how and why big data and consumer privacy are transforming business. Moving beyond summary privacy insights, the book also offers a detailed and compelling action plan for improving performance by protecting against privacy threats as well as developing and implementing offensive privacy strategy. In the future, many firms will be competing through an integrated, customer-centric big data privacy strategy and this book will guide managers in this journey.

In a revealing study of how digital dossiers are created (usually without our knowledge), the author argues that we must rethink our understanding of what privacy is and what it means in the digital age, and then reform the laws that define and regulate it. Reprint.

People tend to think of creativity and strategy as opposites. This book argues that they are far more similar than we might expect. More than this, actively aligning creative and strategic thinking in any enterprise can enable more effective innovation, entrepreneurship, leadership and organizing for the future. By considering strategy as a creative process (and vice versa), the authors define 'creative strategy' as a mindset which switches between opposing processes and characteristics, and which

drives every aspect of the business. The authors draw experiences and cases from across this false divide – from the music industry, sports, fashion, Shakespearean theatre companies, creative and media organizations and dance, as well as what we might regard as more mundane providers of mainstream products and services – to uncover the creative connections behind successful strategy. “Creative Strategy is a talisman for those looking to take a new path” Matt Hardisty, Strategy Director, Mother Advertising “It has been said that business is a hybrid of dancing and calculation – the former incorporating the creative within a firm, the latter the strategic. Bilton and Cummings show how these apparently contradictory processes can be integrated. Their insights about how firms can ‘create to strategize’ and ‘strategize to create’ are informative for managers and management scholars alike.” Jay Barney, Professor and Chase Chair of Strategic Management, Fisher College of

Business, The Ohio State University “In today’s world, new thinking – creativity – is required to tackle long-standing problems or address new opportunities. The trouble is few organizations understand how to foster and apply creativity, at least in any consistent manner. This book provides new insights into just how that can be done. It moves creativity from being just the occasional, and fortuitous, flash of inspiration, to being an embedded feature of the way the organization is run.” Sir George Cox, Author of the Cox Review of Creativity in Business for HM Govt., Past Chair of the Design Council
