Outdoor Site and Facility Management
Wiley
Recreation Facility Management, Second Edition With HKPropel Access, is the fundamental text for students and new professionals who will manage a recreational facility. It

outlines essential responsibilities and prepares readers to perform the duties of a manager for various types of facilities—ranging from recreation and aquatic centers, playgrounds, and parks to fitness centers, golf courses, and sport complexes—each with its own unique

set of goals and challenges. Recreation Facility Management begins by defining the characteristics and expectations of the profession. It discusses the facility design and development process, including assessing needs, planning, reading blueprints, and securing

funding. Topics such as facility resource management, financial issues, and human resources are explored in depth. The text then tackles strategies for utilizing facilities in a safe and efficient manner, addressing safety and security, maintenance, and emergency preparedness and response plans. Finally, a detailed examination of the operation of common types of recreation facilities is offered alongside coverage of national industry standards and guidelines. Content updates to the second edition include a new chapter on ancillary space design with a focus on sustainability and technology updates as well as accessible design. A chapter was also added to address larger-scale recreational sport events and outdoor facilities. Recreation Facility Management also includes new enhancements to help students apply and retain important information: Learning aids, including chapter objectives, review questions, and summary elements, help to facilitate learning. Case studies provide real scenarios and related discussion questions to help students better understand

the material. Sample answers to the questions are provided in the instructor guide. Industry Profile features offer real-world examples from the field. Check It Out elements call out special content to help engage readers. Online materials include learning activities as well as checklists and forms from the files of actual facility managers. Recreation Facility

Management offers a practical introduction to facility design, management, and maintenance for practicing recreation professionals or future professionals. It arms readers with the knowledge and skills necessary for becoming a successful facility manager in any recreation setting. Note: A code for accessing HKPropel is included with this ebook. **Knowledge Management and**

Information Tools for Building Maintenance and Facility Management Amacom Books This book deals with Invitations to Tender (ITTs) for the provision of Facility Management (FM) services. It presents a framework to support companies in preparing clear, comprehensive and effective ITTs, focusing on such key aspects as: organizational structures, tools and

procedures for managing information, allocation of information responsibilities, procedures for services monitoring and control, quality policies, and risk management. It discusses and analyzes a range of basic terms and concepts, procedures, and international standards concerning the Tendering Process, as well as the contents of ITTs, which should represent the translation of

information needs into requirements related to: the client's goals, main categories of information to deal with, expected organization of information, modalities of reporting and control, and level of knowledge to be reached. A further major focus is on potential key innovation scenarios concerning current FM practice, such as Sustainable Procurement, Building Information Modeling (BIM), Big

Data and Internet of Things (IoT) technologies, highlighting both the possible benefits and the possible risks and implications that could negatively affect the quality of FM service provision if not properly treated within the ITT. The book will be of interest to real estate owners, demand organizations and facility managers, enhancing their ability to prepare, interpret and/or

comprehensive look at the impact of technology on facility managers Facility managers are tasked with operating and maintaining the built environment. Technology plays a big role in this function, and often facility managers are asked to install, implement, and work with a variety of technologies without any prior experience in information technology. Technology for Facility Managers

presents the cutting-edge technology that facility managers will come across in their careers. Each chapter covers a different technology and includes an overview and basic primer about the technology—their current use of the technology, how it's evolving, and how it will impact the practice of facility management in the future—and is complemente

d with case studies that address how the technology was implemented and the effect it had on the organization. Technologies covered include: Building information modeling (BIM) Building automation systems (BAS) FM automation (CAFM/IWMS) Condition assessment/life cycle analysis Radio frequency identification (RFID) Geographic information systems (GIS)

Social networking Sustainability and energy analysis Information and communications technology (ICT) Workflow technology that supports standards such as Business Process Modeling Notation (BPMN) and those developed by the Workflow Management Coalition (WfMC) Technology for Facility Managers is appropriate as a textbook for IFMA Accredited Degree

Programs and as a resource for professionals studying for certification through IFMA.

The

omnichannel disruption that upended retail has finally come to the restaurant industry.

Restaurateurs must shift how they think, behave, and invest to survive and thrive. Today's consumers are well-conditioned in their expectations:

they want the same tech-savvy, on-demand, and frictionless interactions with restaurants that they get in every other vertical. If you think your 1,000-unit restaurant chain is too big to fail, remember that 1,000-unit Sears closed nearly all of its stores after it filed for bankruptcy in February 2019. If you think your local family independent restaurant is too beloved to fail, remember the Amazon

effect changed the face of main street and traditional retailing. Delivering the Digital Restaurant explores the massive disruption facing American restaurants through first-hand accounts of food industry veterans and start-up entrepreneurs innovating the future of food. Combining sociological observations, rich industry data, and insider knowledge, Delivering

paints a picture of how food is evolving and how you as a leader, owner, or operator can successfully innovate and meet the new consumer demands to capitalize on the opportunities ahead. Those who understand this digital disruption will be better positioned to embrace the innovation that consumers are demanding. Those who resist will surely be left behind.

Facility Management International Facility Management
 This up-to-date compilation of topics on the maturity and changes occurring within facility management worldwide offers insights into the growth and development of FM and its impact on today's business organisations. International Facility Management presents a comprehensive and diverse collection of topics that

provides current, cutting edge research in the evolving field of FM. The editors here offer a holistic approach to both the study and the practice of facility management, incorporating the perspective of scholars and practitioners from across the globe. Topics covered deal with the changes occurring in the field today and include key research areas for both academics and practitioners

rs. The focus is on actual practice of FM organizations—rather than on what FM should be—and the authors examine the latest techniques, models and case studies to provide a unique exploration of the new global world of facility management. Chapters here cover the changing spectrum of topics including sustainability and energy conservation, and workplace transitions for

greater collaboration. The international scope and emphasis on maturity and professionalism of the field further sets this book apart from its competitors.

John Wiley & Sons
The past few years have seen the emergence of a number of powerful new technologies specifically designed to help facility

managers do their jobs. Unfortunately, a number of political, technical, and procedural impediments have resulted in the majority of computer-aided facility management (CAFM) systems ending up as "shelfware" sitting on the shelves of well-intentioned users. Written by two leading international experts in the field of applying information technology to facility management, this book

provides facility managers with the detailed, hands-on guidance required for successfully supporting CAFM systems. Technical and procedural topics focused on within the book include strategic technology planning, cost/benefit analysis, CAFM system functionality, implementation planning, and technology trends. In Part I of Facility Management Technology,

the authors draw on their experiences as information system consultants to identify major issues and successful strategies associated with planning, implementing, and managing facility management technology. Issues addressed deal not only with CAFM itself, but also with the processes and procedures required for minimizing the risks of technology and successfully implementing

systems in the shortest possible time frame. Part 2 is devoted entirely to real-life case histories from a number of North American and Japanese corporations and government organizations, including SONY, Aetna, Siemens, the Bank of Boston, Long-Term Credit Bank of Japan, Pioneer Hi-Bred, Florida Hospital, and the City of Toronto. Selected for their relevance to specific

aspects of CAFM, each study describes how a particular organization dealt with one or more crucial problems associated with the successful deployment of CAFM technology—a ddressing both day-to-day operations and, importantly, the larger organizational context. Facility Management Technology is the only truly comprehensive text on the subject. With

the wealth of practical advice from Teicholz and Ikeda and its case-study orientation, this book will be an important resource for facility and real estate managers, IS professionals, facility management and design consultants, and students. The only totally practical, case-study based guide to using automation in facility management. FACILITY MANAGEMENT TECHNOLOGY

Lessons from the U.S. and Japan From performing strategic facility technology planning to a cost/benefit analysis, from selecting and managing CAFM systems for your organization to integrating CAFM systems with other types of corporate computing systems, this book offers detailed, hands-on guidance to virtually every aspect of facility management technology. Written by two

leading international experts in the field, it analyzes and contrasts how facility management technology is now being used in North America and Japan and describes successful strategies companies have evolved for incorporating CAFM into their day-to-day operations. "I strongly believe that the clear analysis of facility management technologies and the

unique lessons to be learned from each case study in the book will help facility managers establish their own total systems concept." —Yoshiro Koyama Facility Manager SONY "The authors have provided a contemporary, accurate, and insightful view of the application of CAFM into the American and Japanese corporate environment. The 'icing on the cake' is the generic

and real world case studies that provide much needed realism to CAFM. Readers should come away enthused by their increased understanding and feeling secure that others have blazed the trail ahead of them." —John A. Paccione, AIA Director of Design Florida Hospital "The authors' insights into past, present, and future facility management trends, as well as the clear and practical

examples shown in this book, will surely contribute to the development of facility management and CAFM in both the U.S. and Japan."

 This book examines the Facilities Management (FM) of

hospitals and healthcare facilities, which are among the most complex, costly and challenging kind of buildings to manage. It presents and evaluates the FM service quality standards in Singapore's hospitals from the patient's perspective, and provides recommendations on how to successfully improve FM service quality and achieve higher patient satisfaction. The book also features valuable

supplementary materials, including a checklist of 32 key factors for successful facilities management and another checklist of 24 service attributes for hospitals to achieve desirable service quality in connection with facilities management. The book adopts a unique approach of combining service quality and quality theory to provide a more holistic view of how FM service quality can be

achieved in hospitals. It also integrates three instruments, namely the SERVQUAL model, the Kano model and the QFD model to yield empirical results from surveys for implementation in hospitals. Although the book was written from the perspective of FM service quality for hospitals, the findings and recommendations are also relevant for other non-healthcare sectors where

appropriate lessons may also be drawn for FM and service quality in general. It will particularly benefit Quality Managers, Facilities Managers and Hospital Administrators .
