Get a first-hand look at the ongoing tragedy of 9/11 Healing 9/11 examines programs and interventions created and implemented by occupational therapists to aid those affected directly—and indirectly—by the 9/11 attacks. Ideal for courses in trauma and recovery, community interventions, disaster recovery, health programs and implementation, and mental health interventions as well as for professionals, this powerful book chronicles the experiences of OTs who worked with firefighters, burn victims, and displaced workers, as well as children, students, and clients suffering long-term symptoms of depression and anxiety. These first-hand accounts offer rare insights into the healing process for victims of terrorism (including

OTs themselves), and serve as a guide to developing outreach and counseling services to those touched by future incidents. Healing 9/11 continues the work of *Surviving 9/11: Impact and Experiences of Occupational Therapy Practitioners* (Haworth), presenting detailed personal and professional accounts from OTs who provided physical, emotional, and psychosocial relief to thousands of disaster victims. This unique book reveals how OTs provided aggressive manual therapy, wound care, and scar management to the critically injured; how OTs analyzed the job market and found work for people who had lost their livelihoods; how OTs worked with students in classroom settings to relieve their anxieties; and how OTs helped rescue workers at Ground Zero deal with the emotions that threatened to overpower them. Healing 9/11 examines: nontraditional group therapy non-clinical treatment settings burn rehabilitation pediatric occupational therapy school-based occupational therapy employment planning occupational frame of reference creative arts therapy post traumatic stress disorder and much more Healing 911: Creative Programming by Occupational Therapists is an essential resource for all healthcare professionals who offer relief in times of disaster.

Take your OT educational skills to the next level! *Best Practices in Occupational Therapy Education* is a must-have resource that showcases successful methods and practices in occupational therapy education. This unique book provides the information that can help you improve your skills to become an even more effective contemporary occupational therapy educator. Edited by Patricia Crist and Marjorie E. Scaffa, who previously collaborated on *Education for Occupational Therapy in Health Care: Strategies for the New Millennium*, *Best Practices In Occupational Therapy Education* highlights OT training methods proven effective by top OT educators. The book examines the effects of level II fieldwork on clinical reasoning in occupational

therapy and on the professional development of fieldwork students—in terms of occupational adaptation, clinical reasoning, and client-centeredness. It also shows how to promote professional reflection through problem-based learning evaluations and activities; how OT students' personality types affect the teaching and learning strategies that work best with them; and how to integrate evidence-based practice into students' academic and fieldwork experiences. This results-oriented text examines important concepts and approaches in teaching occupational therapy, such as: Web-based supports for occupational therapy students during level II fieldwork ways to facilitate creative thinking and memory, motivate students, and promote positive learning outcomes using evaluation activities in problem-based learning to help students develop professional reflection skills customizing your instructional delivery methods to the specific needs of your students balancing tradition with innovation education specifically aimed at community-based practice the benefits of online learning methods for developing cultural awareness, cultural sensitivity, and active listening skills The teaching approaches in Best Practices in Occupational Therapy Education are clear and concrete, and include outcomes that support each thesis or learning objective. This analysis of best practices in occupation therapy education is an essential tool for educators that you'll refer to again and again.

It is surprising that there is no "go-to" resource for the occupational therapy or occupational therapy assistant student to have when they embark on their professional journey. With this in mind, Lisa Davis and Marilyn Rosee have written *Occupational Therapy Student to Clinician: Making the Transition* to help students hone the skills employers look for in new hires. While many academic programs cover career-oriented topics, this is the first specific text to pull the pieces together with the purpose of showing readers how to become successful job candidates and employees. Perfect for the student preparing for an occupational therapy career, *Occupational Therapy Student to Clinician* covers all pragmatic issues that students face while securing their first job. This text outlines a variety of topics including resume writing, interview skills, negotiating a salary, working within a team, developing professional competencies, and understanding the culture of an organization. Each chapter includes learning objectives and lists of practice activities that students can use to reinforce their skills. *Occupational Therapy Student to Clinician: Making the Transition* will benefit occupational therapy and occupational therapy assistant students preparing to graduate, as well as employed clinicians dealing with specific employment-related issues. This text will also guide the employee who wants to move to the next job and acquaint themselves with the job-seeking process. This comprehensive resource provides strategies and solutions for many employment challenges and will be an asset in any professional development curriculum.

The Framework, an official AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.
