n Kumon Publishing North America "Kumon Math,"

published by Kumon North America, Inc., is a supplemental mathematics curriculum for students in preschool through secondary school. The curriculum is not structured by age or grade level, but by a student's own pace, and is composed of hundreds of short assignments that progress through increasingly difficult mathematics skills. Students complete one assignment

every weekday and attend a Kumon center for two sessions per week. Every assignment is timed and graded. Students master skills through repetition and cannot progress to a new skill before completing an assignment within a set amount of time and with close to 100% accuracy. New skills and exercises build on previously mastered concepts. The What Works

<p>Clearinghouse (WWC) identified five studies of Kumon Math that were published or released between 1985 and 2008. Two studies are within the scope of the review protocol and have an eligible design, but do not meet WWC evidence standards because there was only one unit of analysis in one or both conditions. Three studies are out of the scope of the review</p>	<p>protocol. The lack of studies meeting WWC evidence standards means that, at this time, the WWC is unable to draw any conclusions based on research about the effectiveness or ineffectiveness of "Kumon Math." <i>Intro to Geometry (Grades 6-8)</i> Kumon Math Workbooks Kumon's Word Problems Workbooks develop the skills necessary for children's success using</p>	<p>math inside and outside the classroom. Word Problems
 Kumon Math Workbooks
 What if everything you know about raw talent, hard work, and great performance is wrong? Few, if any, of the people around you are truly great at what they do. But why aren't they? Why don't they manage businesses like Jack Welch or Andy Grove, play golf like Tiger Woods or play the violin like Itzhak

Perlman?
 Asked to explain why a few people truly excel, most of us offer one of two answers: hard work or a natural talent. However, scientific evidence doesn't support the notion that specific natural talents make great performers. In one of the most popular Fortune articles in years, Geoff Colvin offered new evidence that top performers in any field - from Tiger Woods and

Winston Churchill to Warren Buffett and Jack Welch - are not determined by their inborn talents. Greatness doesn't come from DNA but from practice and perseverance honed over decades. And not just plain old hard work, but a very specific kind of work. The key is how you practice, how you analyze the results of your progress and learn from your mistakes, that enables you to achieve greatness. Now Colvin

has expanded his article with much more scientific background and real-life examples. He shows that the skills of business - negotiating deals, evaluating financial statements, and all the rest - obey the principles that lead to greatness, so that anyone can get better at them with the right kind of effort. Even the hardest decisions and interactions can be systematically improved. This new mind-set,

combined with Colvin's practical advice, will change the way you think about your job and career - and will inspire you to achieve more in all you do.
