Muslims Cities Then and Now National Geographic Books

The phrase "silk road" evokes vivid

scenes of merchants leading camel caravans across vast stretches to trade exotic goods in glittering Oriental bazaars, of pilgrims braving bandits and frozen mountain passes to spread their faith across Asia. Looking at the reality behind these images, this Very Short Introduction illuminates the historical background against which the silk road flourished, shedding light on the importance of old-world cultural exchange to Eurasian and world history. On the one hand, historian James A. Millward treats the silk road broadly, to stand in for the cross-cultural communication between peoples across the Eurasian continent since at least the Neolithic era. On the other, he highlights specific examples of goods and ideas exchanged between the Mediterranean, Persia, India, and China, along with the significance of these exchanges. While including silks, spices, and travelers' tales of colorful locales, the book explains the dynamics of Central Eurasian history that promoted Silk Road interactions--especially the role of nomad empires--highlighting the importance of the biological, technological, artistic, intellectual, and religious interchanges across the continent. Millward shows that these exchanges had a profound effect on the old world that was akin to, if not on the scale of, modern globalization. He also disputes the idea that the silk road declined after the collapse of the Mongol empire or the opening of direct sea routes from Europe to Asia, showing how silk road phenomena continued through the early modern and modern expansion of the Russian and Chinese states across Central Asia. Millward concludes that the idea of the silk road has remained powerful, not only as a popular name for boutiques and restaurants, but also in

modern politics and diplomacy, such as U.S. Secretary of State Hilary Clinton's "Silk Road Initiative" for India, Pakistan, and Afghanistan.

The first complete history of Central Eurasia from ancient times to the present day, *Empires of the Silk Road* represents a fundamental rethinking of the origins, history, and significance of this major world region. Christopher Beckwith describes the rise and fall of the great Central Eurasian empires, including those of the Scythians, Attila the Hun, the Turks and Tibetans, and Genghis Khan and the Mongols. In addition, he explains why the heartland of Central Eurasia led the world economically, scientifically, and artistically for many centuries despite invasions by Persians, Greeks, Arabs, Chinese, and others. In retelling the story of the Old World from the perspective of Central Eurasia, Beckwith provides a new understanding of the internal and external dynamics of the Central Eurasian states and shows how their people repeatedly revolutionized Eurasian civilization. Beckwith recounts the Indo-Europeans' migration out of Central Eurasia, their mixture with local

peoples, and the resulting development of the Graeco-Roman, Persian, Indian, and Chinese civilizations; he details the basis for the thriving economy of premodern Central Eurasia, the economy's disintegration following the region's partition by the Chinese and Russians in the eighteenth and nineteenth centuries, and the damaging of Central Eurasian culture by Modernism; and he discusses the significance for world history of the partial reemergence of Central Eurasian nations after the collapse of the Soviet Union. *Empires of the Silk Road* places Central Eurasia within a world historical framework and demonstrates why the region is central to understanding the history of civilization.

The Silk Road was the most traveled trade route for over 1,000 years until it was eclipsed by maritime trade.

Whitfield presents composite stories of merchants, soldiers, artists, and princesses who traveled the route, and presents its history through their personal experiences.

Economy & Globalization Gr. 5-8 Abrams Concepts of Medicine and Biology Course Description This is the suggested course

sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Medicine From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In *Exploring the History of Medicine*, author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in this book, providing students with a healthy dose of facts, mini-biographies, and vintage illustrations. Semester 2: Biology The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in

the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. *Exploring the World of Biology* is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals.
