GRACE CASSIDY

Female Genital Tumours: Who Classification of Tumours Jones &

Bartlett Publishers
Characterizes the toxicologic and adverse health effects for arsenic, which has been found in many sites targeted for long-term fed. cleanup activities. Contents: (1)

The examination, summary, and interpretation of available toxicologic info. and epidemiologic evaluations on arsenic to ascertain the levels of significant human exposure for the substance and the associated chronic health effects; (2) A determination of whether adequate info. on the health effects of arsenic is available to determine levels of exposure that present a significant risk to human health of chronic health effects; and (3) Identification of toxicologic testing needed to identify the types or levels of exposure that may present significant risk of adverse health effects in humans. Illus.

New Prognostic and Predictive Markers

in Cancer

Progression Springer

Some investigators have hypothesized that estrogens and other hormonally active agents found in the environment might be involved in breast cancer increases and sperm count declines in humans as well as deformities and reproductive problems seen in wildlife. This book looks in detail at the science behind the ominous prospect of "estrogen mimics" threatening health and well-being, from the level of ecosystems and populations to individual people and animals. The committee identifies research needs and offers specific recommendations to decision-makers. This authoritative volume: Critically evaluates the

literature on hormonally active agents in the environment and identifies known and suspected toxicologic mechanisms and effects of fish, wildlife, and humans. Examines whether and how exposure to hormonally active agents occurs—in diet, in pharmaceuticals, from industrial releases into the environment—and why the debate centers on estrogens. Identifies significant uncertainties, limitations of knowledge, and weaknesses in the scientific literature. The book presents a wealth of information and investigates a wide range of examples across the spectrum of life that might be

related to these agents.
Frontiers Media SA
For more than 40 years, DiSaia and Creasman Clinical Gynecologic Oncology has been the leading reference for diagnosis and treatment of gynecologic cancers, providing physicians and trainees alike with expert guidance on clinical presentations and management. The fully revised 10th Edition remains the most readable, most comprehensive text in the field. Under outstanding editorial leadership from Dr. William Creasman and featuring a “who’s who” list of expert contributing authors, this authoritative reference is a must-have resource for improving outcomes and providing effective

patient care. Emphasizes practical clinical presentations and management of commonly seen problems, making this text an excellent resource for daily decision making. Provides in-depth explanations of major topics supplemented with up-to-date references. Features a new chapter on Immunotherapy in Gynecologic Malignancies, updated information on invasive cervical cancer, and significantly revised content on vulvar cancer, with new guidance on micro-staging for sentinels and updates from GOG 173 and the GROINS VII study. Covers key topics such as precision medicine and new biomarker-driven targeted therapies,

cancer staging, targeted therapy, and immunotherapy. Includes quick-reference features such as key point boxes with bulleted lists, highlighted key text, enhanced chapter outlines, clinical algorithms that review recommended treatment and management options, and additional references online. Contains useful appendices covering staging, screening, nutritional therapy, toxicity criteria, blood component therapy, and radiation therapy. An ideal comprehensive resource for clinical practice, personal study, and exam review.

Epidemiology of Women's Health John Wiley & Sons

The past decade has seen an exponential increase in our knowledge and understanding of adipose tissue biology. This has coincided with the continued rise in obesity across all generations. Clearly despite substantial advances in research into adipose tissue this still has had limited impact on the on-going obesity epidemic across a majority of countries in the world. This book brings together many leading experts in the field to provide an up to date and comprehensive review of the key aspects of adipose tissue. It therefore includes chapters on evolution, development and inflammation together with a detailed review of brown and beige

adipose tissue biology and their potential significance in preventing or combating obesity. These chapters are complemented by those on genetics and gender influences, together with nutrition through the life cycle. Ultimately the book provides an overview of the complexities of adipose tissue biology and the continuing challenge to combat obesity in the 21st century.

Herbs for Cancer Treatment Springer

This book provides detailed information on the various types of cancer, etiology, effects, and challenges associated with current cancer treatment regimes. The present edition has been written to reflect recent developments,

success rates and lacunae in herbal and modern cancer therapies. It also describes the use of several herbal formulations to boost patients' immunity, in order to prevent or help them cope with several cancers. The book highlights several herbs/shrubs/trees that have been reported to possess anti-cancer properties, paving the way for in-depth research into the dose standardization and efficacy of plant-based bioactive molecules. It also focuses on the sustainable conservation of medicinal flora, so that, in future, novel biomolecules be extracted and made available for the treatment of various cancers. Given its highly relevant

content, the book will benefit the entire cancer research community (students, scientists, pharmacists, herbalists and lecturers) at universities, research institutions and industry in the areas of oncology, herbal cancer therapy, biotechnology, drug discovery, pharmaceuticals, agriculture, and various disciplines of the biomedical sciences.

Successes and Challenges of NK Immunotherapy: Increasing Anti-tumor Efficacy describes the unique therapeutic applications of NK cells to fight cancers and eliminate the bulk and subset of cancer stem cells responsible for metastasis, relapse and recurrences. The book provides

information on the development, engineering, mechanisms of action, response to various preclinical models, and applications in various clinical trials. Sections cover the development of highly engineered cytotoxic NK cells, their mechanisms of action, preclinical and clinical applications, the development and application of CAR-NK cells, and new NK-drug conjugates, also emphasizing that activated NK cells can target and kill highly resistant cancer stem cells. Written by the leading experts on NK immunotherapy worldwide, this is a valuable resource for researchers, clinicians and members of the biomedical field who are interested in understanding novel

and efficient therapies to fight cancers. Discusses the unique developmental applications of NK immunotherapy against cancers, which differs greatly from other types of immunotherapies Provides up-to-date and highly relevant information through chapters written by the leading researchers in the field Presents a significant number of schematic diagrams for easy understanding and reproducibility *Cumulated Index Medicus* DIANE Publishing From 1962 to 1971, the US military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces, to destroy crops that those forces might

depend on, and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire-support bases. Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram, and cacodylic acid made up the bulk of the herbicides sprayed. The main chemical mixture sprayed was Agent Orange, a 50:50 mixture of 2,4-D and 2,4,5-T. At the time of the spraying, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most toxic form of dioxin, was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations

sprayed in Vietnam. Because of complaints from returning Vietnam veterans about their own health and that of their children combined with emerging toxicologic evidence of adverse effects of phenoxy herbicides and TCDD, the National Academy of Sciences (NAS) was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange, other herbicides used in Vietnam, and the various components of those herbicides, including TCDD. Updated evaluations are conducted every two years to review newly available literature and draw conclusions from the

overall evidence. Veterans and Agent Orange: Update 2012 reviews peer-reviewed scientific reports concerning associations between health outcomes and exposure to TCDD and other chemicals in the herbicides used in Vietnam that were published in October 2010-September 2012 and integrates this information with the previously established evidence database. This report considers whether a statistical association with herbicide exposure exists, taking into account the strength of the scientific evidence and the appropriateness of the statistical and epidemiological methods used to detect the association; the increased risk of

disease among those exposed to herbicides during service in the Republic of Vietnam during the Vietnam era; and whether there exists a plausible biological mechanism or other evidence of a causal relationship between herbicide exposure and the disease.

Management of Endometrial Cancer

Johns Hopkins University Press

In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain

daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing

cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual framework for improving the quality of cancer care. This study proposes

improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and

payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

***When not purchasing directly from the official sales agents of the WHO, especially at online bookshops, please note that there have been issues with counterfeited copies. Buy only from known

sellers and if there are quality issues, please contact the seller for a refund.***** Female Genital Tumours is the fourth volume in the 5th edition of the WHO series on the classification of human tumours. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumours and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as

well as research into all aspects of cancer causation, prevention, therapy, and education. What's new in this edition? The 5th edition, guided by the WHO Classification of Tumours Editorial Board, will establish a single coherent cancer classification presented across a collection of individual volumes organized on the basis of anatomical site (digestive system, breast, soft tissue and bone, etc.) and structured in a systematic manner, with each tumour type listed within a taxonomic classification: site, category, family (class), type, and subtype. In each volume, the entities are now listed from benign to malignant and are described

under an updated set of headings, including histopathology, diagnostic molecular pathology, staging, and easy-to-read essential and desirable diagnostic criteria. Who should read this book?

- Pathologists -
- Oncologists -
- Cancer researchers -
- Surgeons -
- Epidemiologists -
- Cancer registrars

This volume - Prepared by 191 authors and editors - Contributors from around the world - More than 850 high-quality images - More than 3100 references

PET in Oncology
 Springer Science & Business Media
 Offers comprehensive coverage of currently available cancer predictors, the most recent research on carcinogenicity, and the design and interpretation of

carcinogenicity experiments. Presents mouse, rat, and human carcinogenicity data for the liver, kidney, breast, cervix, prostate, hematopoietic system, colon, skin, urinary bladder, mouth, stomach, thyroid, and pancreas.

Cancer of the Female Reproductive Organs
MDPI

At last, here is a comprehensive compilation of the accumulated knowledge on PET and PET/CT in oncology. It covers the entire spectrum from solidly documented indications, such as staging and monitoring of lung and colorectal cancer, to the application of PET/CT in head and neck surgery, gynecology, radiation therapy, urology,

pediatrics and others.

The chapters are supplemented by an introduction into the underlying techniques of both imaging devices and radiopharmacy.

WHO Drug Information
Elsevier Health Sciences

Advances in Oncology reviews the year's most important findings and updates within the field in order to provide practicing oncologists with the current clinical information they need to improve patient outcomes. A distinguished editorial board, led by Dr. Leonidas C. Plataniotis, identifies key areas of major progress and controversy and invites preeminent specialists to contribute original articles devoted to these topics. These

insightful overviews in oncology inform and enhance clinical practice by bringing concepts to a clinical level and exploring their everyday impact on patient care. Contains 25 articles on such topics as de-escalation therapy for HPV-associated oropharyngeal cancer; management of in-transit metastatic melanoma; rare gynecologic tumors; pediatric lymphoma: advances with an eye on disparities; the microbiome and CNS tumors; adjuvant therapy for patients with high-risk urothelial cancer following surgery; targeting the RAS gene for treatment of GI cancers; and more. Provides in-depth, clinical reviews in oncology, providing actionable insights for

clinical practice. Presents the latest information in the field under the leadership of an experienced editorial team. Authors synthesize and distill the latest research and practice guidelines to create these timely topic-based reviews.

Molecular Genetics of Endometrial

Carcinoma JHU Press

"Be informed. Be empowered. Be well." If you are concerned that the cancer in your family is hereditary, you face difficult choices. Should you have a blood test that may reveal whether you have a high likelihood of disease? Do you preemptively treat a disease that may never develop? How do you make decisions now that will affect the rest of your life? This helpful,

informative guide answers your questions as you confront hereditary breast and ovarian cancer. Developed by Facing Our Risk of Cancer Empowered (FORCE), the nation's only nonprofit organization dedicated to supporting families affected by hereditary breast and ovarian cancer, this book stands alone among breast and ovarian cancer resources. Equal parts health guide and memoir, it defines complex issues facing previvors and survivors and provides solutions with a fresh, authoritative voice. Written by three passionate advocates for the hereditary cancer community who are themselves breast cancer survivors, *Confronting Hereditary*

Breast and Ovarian Cancer dispels myths and misinformation and presents practical risk-reducing alternatives and decision-making tools. Including information about genetic counseling and testing, preventive surgery, and fertility and family planning, as well as explanations of health insurance coverage and laws protecting genetic privacy, this resource tackles head-on the challenges of living in a high-risk body. Confronting hereditary cancer is a complex, confusing, and highly individual journey. With its unique combination of the latest research, expert advice, and compelling personal stories, this book gives previvors, survivors, and their family

members the guidance they need to face the unique challenges of hereditary cancer.

Anticancer Properties Of Fruits And Vegetables: A Scientific Review

Elsevier Health Sciences

With contributions from leading authorities in the field, this text explores the major health challenges & conditions that specifically affect women.

The second issue of the WHO Drug Information, Volume 36 of 2022, includes a section on Consultation

Documents with focus on Linezolid, Linezolid tablets, Isoniazid and Isoniazid tablets. This issue also includes the ATC/DDD (Anatomic

Therapeutic Chemical (ATC) and Defined Daily Dose (DDD) Temporary and Final Lists and concludes with the Proposed International Nonproprietary Names (INN) List number 127.

Oncoimmunology

Academic Press

This is a single volume, comprehensive book sanctioned by the American College of Laboratory Animal Medicine (ACLAM), covering the rabbit, guinea pig, hamster, gerbil and other rodents often used in research. This well illustrated reference includes basic biology, anatomy, physiology, behavior, infectious and noninfectious diseases, husbandry and breeding, common experimental methods, and use of the species as a research model. It

is a resource for advancements in the humane and responsible care of: rabbit, guinea pig, hamster, gerbil, chinchilla, deer mouse, kangaroo rat, cotton rat, sand rat, and degu. Includes up-to-date, common experimental methods. Organized by species for easy access during bench research.

Advances in Oncology, E-Book

2021 Nordic Council of Ministers

With the increasing use of immune checkpoint inhibitors (ICI) across various cancers, the trends for indication at earlier stages, and the use of combination immunotherapy, the frequency of ICI-induced immune-related adverse events (irAE) is expected to grow substantially. Management of these

irAE is challenging as it requires not only consideration of the toxicity but also risk-benefit ratios with respect to the primary cancer. Several rheumatic irAE have been reported with ICI therapy including arthritis, myositis, polymyalgia-like syndromes, sicca/Sjogren-like manifestations, and several other less common systemic autoimmune features commonly associated with connective tissue disease. This handbook provides clinicians with a comprehensive overview of the management of rheumatic irAE that develop from cancer immunotherapy. It focuses on the irAE seen with ICI, the most frequently used agents in treating cancer. It

provides an overview of cancer immunology, immunotoxicity, and immunotherapies such as ICI, cytokine-based therapy, and CART. It examines the epidemiology, clinical manifestations, diagnosis, differential diagnosis, and treatment of a variety of rheumatic immune-related adverse events arising from these therapies. Chapters also cover cancer immunotherapy in patients with preexisting rheumatic diseases such as inflammatory arthritis and other connective tissue disorders. The book helps clinicians to distinguish the current types of cancer immunotherapy and general toxicity patterns, recognize and diagnose rheumatic clinical

syndromes, understand the pathogenesis of irAE, and consider risk-benefit ratios when managing patients with rheumatic irAE.

Rheumatic Diseases and Syndromes

Induced by Cancer

Immunotherapy is an essential resource for physicians and related professionals, residents, fellows, graduate students and nurses alike in rheumatology, clinical immunology, oncology, and internal medicine.
