Unlike studies which focus on theory or practice in adult education, this book presents a set of skills and techniques for self-education. Written by the author of *The Lifelong Learner: A Guide to Self-Development* (LJ 9/15/77), it aims to unlock the potential of a learner's mind by teaching fast, efficient, thorough, and productive learning skills. As the book describes, peak learning--or, the ``realist

education,"--is independent, unconstrained, noninstitutionalized development incorporating individual learning styles. The book's ideas are presented in a simple and easy-to-understand manner. Recommended for education collections.-- Samuel T. Huang, Northern Illinois Univ. Libs., DeKalb -Library Journal.

Medicine in the twenty-first century will

be very different from the medicine of today; scientific, technological, economic, and ethical conditions of practice will be transformed. What do these changes portend for medical education? What knowledge should all medical students acquire? How can medical educators prepare students in the most cost-effective way? -- This book describes efforts made at Harvard Medical School during the past to reorient general medical education. Harvard's New Pathway has received national attention since its inception--including a multipart special on PBS's Nova --because it offers a radical restructuring of the traditional medical school curriculum. Its creators, most of them contributors to this book, designed a program that gives students not only a

core of scientific, biomedical, and clinical knowledge but also the skills, tools, and attitudes that will enable them to become lifelong learners, to cope with and use new information, and--most important--to provide better patient care. New Pathways to Medical Education also tells the inside story of how a traditional and research-oriented faculty was persuaded to cooperate with colleagues outside their departments in adopting a student-centered, problem-based approach to learning. Central to this transformation was the Patient-Doctor course, which the book describes in detail. This course--which teaches students to LISC the patient-doctor relationship for the benefit of patients--is considered one of the most significant contributions to medical education in the

New Pathway. New Pathways to Medical Education will inspire physicians, medical scientists, and medical educators around the world to think and act more decisively to reform medical education. And because it documents the development of an innovative curriculum, this study will interest educators in all fields.

This textbook presents hands-on training material for medical students. The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket

cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of

older, multimorbid, and vulnerable persons. The major strength of this book – published under the auspices of the EUGMS – is its pragmatic, goal-oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.
