"Superb and almost unbearably charming, Her Majesty's Royal Coven... expertly launches an exciting new trilogy."

—The New York Times Book Review "Talk about a gut punch of a novel.

...A provocative exploration of intersectional feminism, loyalty, gender and transphobia [that] invites readers into an intricately woven web of magic, friendship and power."

—The Nerd Daily A Discovery of Witches meets The Craft in this epic fantasy about a group of childhood friends who are also witches. If you look hard enough at old photographs, we're there in the background: healers in the trenches; Suffragettes; Bletchley Park oracles; land girls and resistance fighters. Why is it we help in times of crisis? We have a gift. We are stronger than Mundanes, plain and simple. At the dawn of their adolescence, on the eve of the summer solstice, four young girls-- Helena, Leonie, Niamh and Elle--took the oath to join Her Majesty's Royal Coven, established by

Queen Elizabeth I as a covert government department. Now, decades later, the witch community is still reeling from a civil war and Helena is the reigning High Priestess of the organization. Yet Helena is the only one of her friend group still enmeshed in the stale bureaucracy of HMRC. Elle is trying to pretend she's a normal housewife, and Niamh has become a country vet, using her powers to heal sick animals. In what Helena perceives as the deepest betrayal, Leonie has defected to start her own more inclusive and intersectional coven, Diaspora. And now Helena has a bigger problem. A young warlock of extraordinary capabilities has been captured by authorities and seems to threaten the very existence of HMRC. With conflicting beliefs over the best course of action, the four friends must decide where their loyalties lie: with preserving tradition, or doing what is right. Juno Dawson explores gender and the corrupting nature of power in a delightful and provocative story of magic and matriarchy, friendship and feminism. Dealing with all the aspects of

contemporary womanhood, as well as being phenomenally powerful witches, Niamh, Helena, Leonie and Elle may have grown apart but they will always be bound by the sisterhood of the coven.

Unbiased Stereology, Second Edition is a practical guide to making unbiased 3-D measurements via the microscope. Only those stereological techniques which have been tried and tested by real application are included. Although this technology is essentially mathematical and statistical, the authors do not immerse the reader in complex analysis, but rather provide simple heuristic explanations and references to the original proof, and illustrate the theory by analogies drawn from everyday experience. To give practical experience in application of the techniques, exercises are provided at the end of each chapter, complete

with detailed worked answers.

For many years, laboratory dogs have served as important animal models for biomedical research that has advanced human health. Conducted at the request of the U.S. Department of Veterans Affairs (VA), this report assesses whether laboratory dogs are or will continue to be necessary for biomedical research related to the VA's mission. The report concludes that using laboratory dogs in research at the VA is scientifically necessary for only a few areas of current biomedical research. The report recommends that the VA adopt an expanded set of criteria for determining when it is scientifically necessary to use laboratory dogs in VA

biomedical research; that the VA promote the development and use of alternatives to laboratory dogs; and highlights opportunities for the VA to enhance the welfare of laboratory dogs that are being used in biomedical research areas for which they have been deemed necessary.

Topics covered include: basic principles in sleep science, clinical sleep history taking, primary sleep disorders in psychiatric contexts, and

sleep disturbance across a range of mood, anxiety, psychotic, substance use, cognitive and developmental disorders. Written by outstanding experts in the field of sleep medicine and psychiatry, this academically rigorous and clinically useful text is an essential resource for psychiatrists, psychologists and other health professionals interested in the relationship between sleep and mental illness. New York Times bestselling author Maria Goodavage takes us on a thrilling, delightful, globe-trotting journey to discover the heartwarming and fascinating new world of doctor dogs. In this groundbreaking book, Goodavage brings us behind the scenes of cutting-edge science at top research centers, and into the lives of people whose well-being depends on their devoted, highly skilled personal MDs (medical dogs). With her signature wit and passion, Goodavage explores how doctor dogs are becoming our happy allies in the fight against dozens of physical and mental conditions. We meet dogs who detect cancer and

Parkinson's disease, and dogs who alert people to seizures and diabetic lows or highs and other life-threatening physical ailments. Goodavage reveals the revolutionary ways dogs are helping those with autism, anxiety, depression, schizophrenia, and post-traumatic stress disorder. And she introduces us to intrepid canines who are protecting us from antibiotic-resistant bugs, and to dogs who may one day help keep us safe from epidemic catastrophe. Their paycheck for their lifesaving work? Heartfelt praise and a tasty treat or favorite toy. The emotional element in Doctor Dogs delivers as powerfully as the science. You don't have to be a dog lover to care deeply about what these dogs are doing and what we are learning from them—although if you're not a dog lover, you probably will be by the end of the book.

Innovations in CBT for Childhood Anxiety, OCD, and PTSD Oxford University Press

Perfect for expecting parents who want to provide a soothing home for the newest member of their family, *The Happiest Baby on the Block*, the national bestseller by respected pediatrician and child development expert Dr. Harvey Karp, is a revolutionary method for calming a crying infant

and promoting healthy sleep from day one. In perhaps the most important parenting book of the decade, Dr. Harvey Karp reveals an extraordinary treasure sought by parents for centuries --an automatic "off-switch" for their baby's crying. No wonder pediatricians across the country are praising him and thousands of Los Angeles parents, from working moms to superstars like Madonna and Pierce Brosnan, have turned to him to learn the secrets for making babies happy. Never again will parents have to stand by helpless and frazzled while their poor baby cries and cries. Dr. Karp has found there IS a remedy for colic. "I share with parents techniques known only to the most gifted baby soothers throughout history ...and I explain exactly how they work." In a innovative and thought-provoking reevaluation of early infancy, Dr. Karp blends modern science and ancient wisdom to prove that newborns are not fully ready for the world when they are born. Through his research and experience, he has developed four basic principles that are crucial for understanding babies

as well as improving their sleep and soothing their senses: ·The Missing Fourth Trimester: as odd as it may sound, one of the main reasons babies cry is because they are born three months too soon. ·The Calming Reflex: the automatic reset switch to stop crying of any baby in the first few months of life. ·The 5 "S's": the simple steps (swaddling, side/stomach position, shushing, swinging and sucking) that trigger the calming reflex. For centuries, parents have tried these methods only to fail because, as with a knee reflex, the calming reflex only works when it is triggered in precisely the right way. Unlike other books that merely list these techniques Dr. Karp teaches parents exactly how to do them, to guide cranky infants to calm and easy babies to serenity in minutes...and help them sleep longer too. ·The Cuddle Cure: the perfect mix the 5 "S's" that can soothe even the most colicky of infants. In the book, Dr. Karp also explains: What is colic? Why do most babies get much more upset in the evening? How can a parent calm a baby--in mere minutes? Can babies be spoiled? When

should a parent of a crying baby call the doctor? How can a parent get their baby to sleep a few hours longer? Even the most loving moms and dads sometimes feel pushed to the breaking point by their infant's persistent cries. Coming to the rescue, however, Dr. Karp places in the hands of parents, grandparents, and all childcare givers the tools they need to be able to calm their babies almost as easily as...turning off a light. From the Hardcover edition.

Dogs and humans have worked side by side for thousands of years, and over the millennia we've come to depend upon our pooches as hunters, protectors, and faithful companions. But when it comes to the extraordinary quality of man's best friend which we rely on most, the winner is clear--by a nose. In *Secrets of the Snout*, Frank Rosell blends storytelling and science as he sniffs out the myriad ways in which dogs have been trained to employ their incredible olfactory skills, from sussing out cancer and narcotics to locating endangered and invasive species, as well as

missing persons (and golf balls). With 300 million receptors to our mere 5 million, a dog's nose is estimated to be between 100,000 and 100 million times more sensitive than a human's. No wonder, then, that our nasally inferior species has sought to unleash the prodigious power of canine shnozzes. Rosell here takes us for a walk with a pack of superhero sniffers including Tutta, a dog with a fine nose for fine wine; the pet-finder pooch AJ; search-and-rescue dog Barry; the hunting dog Balder; the police dogs Rasko and Trixxi; the warfare dog Lisa; the cancer detection dog Jack; Tucker, who scents floating killer whale feces; and even Elvis, who can smell when you're ovulating. With each dog, Rosell turns his nose to the evolution of the unique olfactory systems involved, which odors dogs detect, and how they do it. A celebration of how the canine sense for scents works—and works for us—*Secrets of the Snout* will have dog lovers, trainers, and researchers alike all howling with delight. Exploring this most pointed of canine wonders, Rosell reveals the often surprising ways

in which dogs are bettering our world, one nose at a time. *Pain Management and the Opioid Epidemic* CSHL Press
Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid

epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

In these experimental lyric essays, Lowrey explores queerness, PTSD, anxiety, and created family. A framing of Rally Obedience and Dog Agility course maps create a textured story on the page, a hybrid form in which Lowrey recounts a spiritual-like relationship to dogs beginning in childhood, a passion for dog shows fractured in adolescence with a period of homelessness, a service dog, anxiety, and a return to dog sports. This collection transcends Lowrey's personal relationship with dogs to tell a larger story about healing, loss, trauma, survival, and of course the love (and salvation) of many good dogs.

 "Healing/Heeling is a poetic fever-dream of a small book about training, handling and living with dogs: how they make us and save us and can even almost break us. Sassafras Lowrey's book is an essay, a harsh poem, an autobiography, a fractured narrative-and an apology and ode to the dogs of hir life: the spooky, the injured, the vulnerable, the brave. But

the book's heartbreak is beautifully balanced by its close companion: the transcendent joy that comes from working in close partnership with a dog. Serpentine and leap, heel and heal."Cat Warren, NYT bestselling author of *What the Dog Knows: Scent, Science, and the Amazing Ways Dogs Perceive the World*. "Merging the mechanics of dog handling courses with the intensely personal story of how relationships with dogs have shaped hir life, Sassafras Lowrey has created a new kind of memoir, both deeply engaging and emotionally devastating. Combining poetry and prose, ze explores the themes of queerness, family, and the deep bond between humans and dogs with raw honesty and grace."Michael Thomas Ford, 5-time Lambda Literary Award Winner"Using narrative mixed with the visuals of dog agility course maps, Sassafras guides us through a journey of obstacles, sudden turns, long tunnels, leaps of bravery, and now, eventually, so many "clean runs." So often, after inordinate trauma, it is necessary to not only leave what damaged us

behind but also everything associated with it. Sassafras Lowrey shows us that it is possible to not only re-invent ourselves, but also to gather up and claim the lost pieces of what has always sustained us.- Sandra Gail Lambert, author of *A Certain Loneliness*"This small book has a big impact if you love dogs. It is a deep and dreamlike meditation on how hir love of dogs intertwined with and redeemed hir brutalized childhood and how dog sports like agility, obedience and scent work nurtured a damaged sense of self worth and agency."-Esther Newton, author of *My Butch Career: A Memoir Dog Catalog* Springer Science & Business Media
 ÿ In the past 30 years the use of assistance dogs for people with various difficulties and disabilities other than blindness and hearing loss has developed enormously, thanks to the inspiration, foresight and hard work of a few key people. Dick Lane, now retired as a vet, has been closely involved in the charity Dogs for the Disabled since its foundation in the 1980s. In this fascinating and authoritative work, based on his own

experience, on interviews with users of assistance dogs and from official records, he tells the story of the growing appreciation of the value of dogs to many people, from those with an autistic spectrum disorder (under the recent PAWS initiative) to tetraplegics.
