*The Truth about Contact Lenses* Lippincott Williams & Wilkins

This book comprises an integrated review of ocular therapeutics across all relevant fields. It addresses the real-world requirements of ophthalmologists, pharmacists and optometrists, as observed through working alongside these practitioners for two decades. Knowledge surrounding agents used in ophthalmic practice has, historically, been scattered. The book facilitates understanding of ocular drug therapy by compiling all key aspects of the pharmacology, toxicology, pharmaceutical science, ocular biochemistry and cell biology of these agents. Chapters detail drug transfer across barriers, systemic toxicity of topically applied drugs, autonomic drugs used for diagnostics, as well as anti-inflammatory, antiallergic, glaucoma and antimicrobial therapies, and avenues for the development of new ocular drugs. Applications of extemporaneously prepared formulations are described to inform day-to-day clinical practice. The use of mucoadhesive polymers in tear substitutes, ocular drug delivery systems, stem cell therapy, pharmacogenomics and antiangiogenic ocular chemotherapy are also explored. The book also provides insights from drugs of herbal origin, and a historical perspective on drugs for ocular use. Practicing and resident ophthalmologists, optometrists, pharmacists, nursing professionals, scholars in ocular drug research and students will equally benefit from this comprehensive guide.

This book summarizes current understanding of the scientific, clinical, and technical issues surrounding the use of contact lenses. It discusses the special occupational conditions experienced by military personnel, particularly in extreme environments, that give rise to the question of whether or not to use contact lenses. Experts in optometry, ophthalmology, visual psychophysics, and engineering describe recent developments in design and use; and representatives of the military services provide examples of actual situations in aerospace settings. Considerations in Contact Lens Use Under Adverse Conditions will be of particular interest to those involved in the design of contact lenses and those responsible for occupational safety and health matters in the private sector.

When actor Will Shephard turned up at the Beverley Hills offices of Dino De Laurentiis, he expected to be interviewed for a modest role in the great man's next production. "My agent told me on the phone that you were looking for actors who could do animal movements, but she didn't tell me what the film was about," said Will. "It's King Kong," said the producer. "You mean a remake of the 1933 film?" "Yes." "What's the role I'm being considered for?" "It's Kong." And so began an extraordinary few months in Will's life as he joined fellow actor and make-up artist Rick Baker to become the one of the 'guys in the ape suit', striding through miniature jungles, wrestling a giant rubber snake, running amok in Manhattan and scaling the World Trade Center. Inside the suit it was fearsomely hot, the special contact lenses made him dizzy and he frequently had to insert a tube through the gorilla mask in order to breathe. But the illusion was perfect: audiences never knew that the highly publicized, forty-foot tall, mechanical Kong that had cost millions of dollars to develop only got a few seconds of exposure, and that on screen for the rest of the movie were Rick and Will, clad in rubber and bear-hide. Inside King Kong is Will's journal of his experiences on the set in 1976. This delightful, engaging and funny account is accompanied by behind-the-scenes photographs that are being published for the first time.
