The internet is established in most households worldwide and used for entertainment purposes, shopping, social networking, business activities, banking, telemedicine, and more. As more individuals and businesses use this essential tool to connect with each other and consumers, more private data is exposed to criminals ready to exploit it for their gain. Thus, it is essential to continue discussions involving policies that regulate and monitor these activities, and anticipate new laws that should be implemented in order to protect users. Cyber Law, Privacy, and

Security: Concepts, Methodologies, Tools, and Applications examines current internet and data protection laws and their impact on user experience and cybercrime, and explores the need for further policies that protect user identities, data, and privacy. It also offers the latest methodologies and applications in the areas of digital security and threats. Highlighting a range of topics such as online privacy and security, hacking, and online threat protection, this multi-volume book is ideally designed for IT specialists, administrators, policymakers, researchers, academicians, and upper-level students.

This book is open access under a CC BY 4.0 license Maritime or marine spatial planning has gained increasing prominence as an integrated, common-sense approach to promoting sustainable maritime development. A growing number of countries are engaged in preparing and implementing maritime spatial plans: however, questions are emerging from the growing body of MSP experience. How can maritime spatial planning deal with a complex and dynamic environment such as the sea? How can MSP be embedded in multiple levels of governance across regional and national borders – and how far does the environment benefit from this new approach? This open access book is the first comprehensive overview of maritime spatial planning. Situated at the intersection between theory and

practice, the volume draws together several strands of interdisciplinary research, reflecting on the history of MSP as well as examining current practice and looking towards the future. The authors and contributors examine MSP from disciplines as diverse as geography, urban planning, political science, natural science, sociology and education; reflecting the growing critical engagement with MSP in many academic fields. This innovative and pioneering volume will be of interest and value to students and scholars of maritime spatial planning, as well as planners and practitioners. Jacek Zaucha is Professor of Economics at Gdansk University, Poland. He is long experienced in maritime spatial planning, and is currently leading the team preparing the first plan for Polish waters. Kira Gee is Research Associate at the Centre for Materials and Coastal Research (Helmholtz-Zentrum Geesthacht), Germany. This book provides an in-depth analysis of India's pulses sector in terms of production, prices, markets, and trade. Pulses play a pivotal role in a developing country like India for all categories of people due to its rich protein content (double that of wheat and three times more than that of rice). Despite being an important crop from the point of view of food, nutrition, and environmental security, the focus of food security policies in developing countries has been more on wheat and rice production. This book

analyses factors influencing the supply of pulses with a greater emphasis on government interventions such as minimum support price (MSP) and National Food Security Mission (NFSM), the effectiveness of MSP and factors influencing farmers' access to MSP, the import dependency implications through a detailed import pricing behavior of major importers of major pulses. It investigates production, market dynamics, and trade implications related to two major pulses, chickpea and pigeonpea, produced by all pulse-producing States in India. Analysis of farmer's awareness of MSP and factors influencing access to MSP are undertaken through a comprehensive household survey from the States of Maharashtra, Karnataka, and Madhya Pradesh. Finally, the book analyses import implications and import pricing behaviour for all major pulses imported by India. The book would be very useful for researchers working on the issues of agricultural production and food security, for agriculture and agri-business students, as well as for policy makers to understand the inherent dynamics in the pulses sector.

The public sector plays an important role for both regulation and in the delivery of services directly or indirectly. In this context, it is important to consider transformation, change, and innovation,

which are the elements on which the main determinants that influence public management and the administration of economic, social, and political systems are based. This book describes the nature of the problem, its multidimensionality, and the need for original approaches, through the contribution of scholars belonging to different disciplines. This book contains nine chapters in a single section (Public Management and Administration), which, through the different approaches to the subject by the authors, help to explain the issues of the public sector.

"Law enforcement (LE) aspects have been an increasingly prominent feature within the U.S. Government's (USG's) commitment to international operations. Beyond the deployment of police personnel to interim policing missions, LE agencies may also be involved in international operations to enforce U.S. domestic law; for capacity building; and/or in support of U.S. military forces. This analysis examines lessons from three operations: Panama (1989-99), Colombia (1989-Present), and Kosovo (1998-Present). This analysis was supported by an extensive range of interviews and in-country field research in Colombia and Kosovo. The lessons learned were developed and validated in a series of workshops with subject matter experts. The results show the pervasive and complex role that law

enforcement and related issues have played in contemporary international operations. Despite the unique circumstances and history of each operation, there were key findings that are common to all operations considered and have implications for broader USG law enforcement efforts in support of current and future international operations." --
