While there are numerous resources for practitioners on the subject, the ambiguity remains of what actually constitutes effective multicultural counseling and psychotherapy and how it should be incorporated into their sessions. This book addresses the question of how to apply current theories and research with a unique "start-to-finish" approach, examining the role culture plays in each stage of the therapeutic process, from before the clinical intake to termination. Each chapter is devoted to one of these stages and provides practical strategies, techniques, examples, and case studies. Prolonged Exposure for PTSD in Intensive Outpatient Programs (PE-IOP) presents an innovative PTSD treatment model for the use of prolonged exposure (PE) in residential and intensive outpatient programs, which increases access to care and retention in care while providing transformational symptom outcomes. Drs. Rauch, Rothbaum, Smith, and Foa present the elements of the PE protocol along with all the logistics for how to provide PE in an intensive outpatient program. PE is the most widely studied treatment for PTSD, with over 100 studies showing its efficacy for PTSD and comorbid patient populations-from single incident and multiple incident traumas of all types (e.g., combat, sexual assault, etc.) Variations and considerations for implementation are presented to allow providers designing programs to consider what best fits their patient population and setting. Patient and provider forms are included for use. As leaders in clinical practice, training, and research in the field of PTSD treatment, Drs. Rauch, Rothbaum, Smith, and Foa provide concise but thorough description of the key components of the program, how to implement them, and when and how to consider adaptations.

Other research examines adolescent risk and vulnerability profiles of lesbians, gays, and bisexuals, as well as the impact of racism.
