In this volume, the Gardners and their co-workers explore the continuity between human behavior and the rest of animal behavior and find no barriers to be broken, no chasms to be bridged, only unknown territory to be charted and fresh discoveries to be made. With the beginning of Project Washoe in 1966, sign language studies of chimpanzees opened up a new field of scientific inquiry by providing a new tool for looking at the nature of language and intelligence and the relation between human and nonhuman intelligence. Here, the pioneers in this field review the unique procedures that they developed and the extensive body of evidence accumulated over the years. This close look at what the

chimpanzees have actually done and said under rigorous laboratory conditions is the best answer to the heated controversies that have been generated by this line of research among ethologists, psychologists, anthropologists, linguists, and philosophers.

In *Sign Language Interpreting (SLI)* there is a great need for a volume devoted to classic and seminal articles and essays dedicated to this specific domain of language interpreting. Students, educators, and practitioners will benefit from having access to a collection of

historical and influential articles that contributed to the progress of the global SLI profession. In SLI there is a long history of outstanding research and scholarship, much of which is now out of print, or was published in obscure journals, or featured in publications that are no longer in print. These readings are significant to the progression of SLI as an academic discipline and a profession. As the years have gone by, many of these readings have been lost to students, educators, and practitioners because they are difficult to locate or unavailable, or because this audience simply does not know they exist. This volume brings together the seminal texts in our field that document the philosophical, evidence-based and analytical progression of SLI work.

One of the foremost authorities on the use of sign language with hearing children provides a guide for teachers and parents who want to introduce signing in hearing children's language development. Marilyn Daniels provides a complete explanation for its use, a short history of sign language and its primary role within the Deaf

community, an identification of the steps to reading success delineated with suggestions for incorporating sign language, and finally the results of studies and reactions of children, teachers, and parents. She shows how sign language can be used to improve hearing children's English vocabulary, reading ability, spelling proficiency, self-esteem, and comfort with expressing emotions. Signing also facilitates communication, aids teachers with classroom management, and has been shown to promote a more comfortable learning environment while initiating an interest and enthusiasm for learning on the part of students. Sign language is shown to be an effective agent to accelerate literacy in hearing children from babyhood through sixth grade. A comprehensive exploration of the physiological rationale for the educational advantage sign carries is presented. Overlapping integrated brain activities are incited by movement, vision, meaning, memory, play and the hand itself when sign language is used. Recent findings clearly indicate this bilingual approach with hearing children activates brain growth and development.

The novel features a Mars-astronaut couple (a Scandinavian-American surfer and a Tibetan-American woman) and a visionary Tibetan-American physicist (the surfer's mentor and the woman's uncle) who summon the galaxy's

apex civilization, which clones worthy deceased humans and tests them on an alien Earth-like planet where dinosaur-like creatures with primitive tech tempt cloned humans with genocide. The essays range from perennial questions (consciousness, knowledge, the mind-body problem, etc) to more recent ones (quantum mechanics, alternate universes, Black Lives Matter, American exceptionalism, global warming, the Mars frontier, etc).
