Relations Board* DIANE Publishing
 As children, most of us were very creative.
 Yet, as we became more educated our
 creative powers generally gave way to
 relying upon something we have studied
 and been trained to do. Bringing out
 creativity in mature individuals can be
 accomplished but is a difficult because we
 are so well trained to follow the rules that
 other people developed in the past.
 Everyone can and should be creative. The
 book focuses on how to stimulate the
 creativity that lies within each of us.

Resource Inventories](#) Frontiers Media SA
 A critical problem in resource-scarce
 countries across the globe is the shortage
 of appropriately trained health care
 providers. According to the World Health
 Organization, the current global health
 workforce shortage of 7.2 million providers
 is estimated to increase to 12.9 million by
 2035. This disproportionately affects
 resource-scarce countries, denying basic
 health care to millions and limiting access
 to life-saving treatments. Due to limited

resources in these countries, not enough
 health professionals receive training, few
 have the opportunity for continuing
 education, and the ability to develop or
 implement educational programs and
 curricula is constrained. Additionally,
 many existing providers choose to
 emigrate in pursuit of professional
 advancement opportunities, contributing
 to the overall shortage of qualified health
 care providers in these environments.
 Efforts to strengthen health workforce
 capacity not only increases access, safety
 and availability of care, but is critical to
 building resilient health systems capable
 of caring for the world's neediest
 populations. This requires not only
 cultivating new health care providers, but
 also providing ongoing professional
 development to retain and support current
 providers, advancing the level of practice
 in accordance with current clinical science,

cultivating educators, and enhancing training curricula. It is critical also to contribute to the limited body of research documenting the effectiveness and impact of various models of collaborative education and partnership to improve health worker training and retention. This Research Topic examines strategies for building health workforce capacity through the prism of educational partnerships, offering significant examples of effective models of international collaborative education as well as insight and guidance on the structure and operation of successful global partnerships. Collectively, the 31 articles accepted and included in this eBook represent a diversity of health professions and geographies across academic, non-governmental organizations and other global partnership forms. The published manuscripts highlight various elements of partnerships with several consistent themes emerging: capacity building, local empowerment, mutual trust and respect, long-term commitment, equity, collaboration, and the importance of integrating theory and practice, for a balance of academic and clinical development. The manuscripts provide examples of partnership and educational programs that are in the formative, early stages of implementation and others which have been sustained long term, some for decades. The following eBook is divided into two parts, with each part broken down into sections. Part I of the eBook includes 18 manuscripts that showcase long-term educational programs that strongly exemplify multiple, foundational aspects of international partnerships in education including mutual collaboration and project management, empowerment of host partners to lead and sustain programs, and capacity building. While individual manuscripts included in Part I look broadly at multiple aspects of successful, international partnerships in education, Part II manuscripts focus intently on one-two elements. Part II includes 13 articles that highlight partnership through short- rather than long-term educational initiatives as well as program development and broad academic partnerships. This Research Topic was sponsored by Health Volunteers Overseas – a United States based non-profit that collaborates with over eighty international universities and health institutions to send volunteer health professionals to low-resource countries to provide continuing education, train the trainer courses, professional support, and

consultation on academic program and curricula development. *Health Occupations Training Programs Administered by Hospitals, October 1973, a Directory* Government Printing Office Descriptions of preparatory education programs in the United States, Guam, and Puerto Rico as to length in months, year the program began, educational requirements, accreditation status, and numbers of graduates in 1973 and 1974. Geographical arrangement under major occupation categories. Also includes listing by geographical location and hospital name, with information about number of beds, ownership, services provided, and programs offered. Miscellaneous appendixes. Index of training programs.
