This book provides an introductory overview of advancements in platelet-rich plasma (PRP), focusing on current technologies and methods, new challenges

and controversies, and avenues for further research. With many studies demonstrating a role for PRP in improving response to injury, this book aims to facilitate the application of this rapidly growing treatment option for trauma patients. Platelet Rich Plasma in Musculoskeletal Practice is a highly informative and carefully presented book,

providing scientific and clinical insight for specialists who utilize PRP in daily practice, and for readers who are seeking to learn more about this effective injury treatment.

Acute Muscle Injuries

Springer Nature
Guest edited by Drs. Jonathan Kay and Sergio Schwartzman, this issue of Rheumatic Disease Clinics will cover

Controversies in Rheumatology. This issue is one of four selected each year by our series Consulting Editor, Dr. Michael Weisman of Cedars-Sinai. Articles explore several questions, including, but not limited to: Is triple therapy or methotrexate plus a biologic the initial treatment of choice for RA patients; Is hypo or hyper-uricemia a risk requiring treatment for cardiac morbidity and mortality; Are there benefits and risks to biosimilars from a patient perspective;

Should platelet-rich plasma be used to treat osteoarthritis; Is there a role for stem cell therapy to treat cartilage defects in osteoarthritis; Should any rheumatology patient, today, be treated with bone marrow ablation and stem cell transplantation; Is there effective prevention, prophylaxis, or treatment for CPPD arthritis; Is fibromyalgia a psychiatric disease or a pain syndrome; Should cyclophosphamide still be used to treat ANCA-associated vasculitis; Does methotrexate have

a place in the treatment of psoriatic arthritis; Should hydroxychloroquine dosing be limited because of potential ocular toxicity; and Should generalized immunosuppression or targeted organ treatment be the best principle for overall management of SLE.

This volume contains papers and discussions of the VIth Dialyse-Arzte Workshop, which was held

in Bernried at Lake Starnberg near Munich the 5th and 6th of March 1980. Generously sponsored by Travenol, Munich, the Dialyse-Arzte meetings now have a tradition spanning 16 years. According to the constitution of these meetings, the topics of earlier years had to cover dialysis and related fields. Thus the sponsor requested that this year also one lecture - incorporated here as part - should deal with the state of art of dialysis, thereby hopefully linking

this Workshop to the previous meetings. Dialysis techniques of the 1960s, pioneered by many of attending speakers and panelists (see List of Contributors), have never come to a standstill. Indeed, vascular access and extracorporeal circulation have become routine for the nephrologist and have made possible the introduction of new approaches, such as hemofiltration and hemoperfusion. Also today new membrane technologies provide us

with a potentially even more effective therapeutic tool, namely plasma separation.

This Special Issue on “Blood-Derived Products for Tissue Repair and Regeneration” reveals the evolution and diversity of platelet rich plasma (PRP) technologies, which includes experimental research on novel formulations, the creation of combination therapies, and the exploration of

potential modifiers of PRPs, as well as efficacy of PRP therapies in clinical veterinary and human applications. Scientist and clinicians are now starting to develop different treatments based on their reinterpretation of the traditional roles of platelets and plasma, and the current Issue has provided a forum for sharing research and ways of understanding the associated medicinal benefits from different points of view. The research interest in this area has covered different

medical disciplines, such as ophthalmology, dentistry, orthopedics, and sports medicine. *Platelet-Rich Plasma* Lippincott Williams & Wilkins

This book presents the evidence related to the use of injectable biologics to provide faster and better healing for musculoskeletal lesions and conditions. The authors discuss approaches, such as blood derivatives and cell concentrates, applied to lesions of muscles, ligaments, tendons, bones, meniscus and cartilage, as well as osteoarthritis. Chapters are written by some of the most influential opinion leaders in the field, with up-to-date review of the

current literature, where the authors explore both the potential and the limitations of these minimally invasive and promising treatments. The first section is devoted to the formulations and rationale for the use of injectable orthobiologics, while the second section reviews current treatment methods applied to specific joints and pathologies – ranging from tendinopathies through non-unions to articular degenerative processes – as well as the results of these treatment

approaches. The third section explores future perspectives, such as pluripotent stem cells, gene therapy, and the stimulation of intrinsic stromal cell niches. Appealing to a broad readership, this book will be of interest to both laboratory research scientists and clinicians, including orthopedists, sports physicians, physiatrists, and regenerative medicine experts.
