This guide is the most concise and authoritative available for the installation of PVC gasket-joint pressure and non-pressure pipes and fittings. Written and sponsored by the Uni-Bell PVC Pipe Association, it contains up-to-date information and comes complete with practical associated tables and figures that will help users to be more effective and efficient at installing PVC piping systems. This work provides preferred methods of installation based on field experience, published reports, and other industry sources. The guide's unique, easy-to-use reversible-book format provides two valuable guides in one--for working on water pipes or sewer pipes--making it easy for readers to quickly access the specific information they are seeking, be it on the job, in training, or studying for certification. Benefits of the Guide The Contractor's Guide provides value to several stakeholders: Contractors--Following this work's recommendations can improve job efficiency, reduce potential pipeline problems, and help ensure maximum performance. Owners--Proper installation helps ensure the maximum service life for piping systems. Workers (Training)--This guide can serve as a reference prior to undertaking a pipeline project. Workers (Certification)--In jurisdictions where installers are required to be certified, this work can serve as an invaluable study resource.

This book is intended to guide readers in the installation of sewage in farm homes. The main purpose of home-sewerage works is to get rid of sewage in such ways as (1) to guard against the transmission of disease germs through drinking water, flies, or other means; (2) to avoid creating a nuisance. What is the best method and what is the best outfit are questions not to be answered offhand from afar. A treatment that is a success in one location may be a failure in another. In every instance, decisions should be based upon field data and full knowledge of the local needs and conditions. An installation planned from assumed conditions may work harm. The householder may be misled as to the purification and rely on protection that is not real. He may anticipate little or no odor and find a nuisance has been created.
