In the past two decades public debate about the risks, benefits, and safety associated with drugs has intensified. Public disputes over risks are brought to court when individuals seek compensation for health problems attributed to a pharmaceutical product. The issue reaches legislatures and regulatory agencies when consumer advocates seek to influence the standards of drug usage. Front-page news tends to focus on accidents or other risk events with drugs. Drug risk and drug safety have become an important political issue. Drug regulatory agencies have been instituted, and their responsibility has increased. The approval to market a drug is dependent on a set of sophisticated studies executed according to strict protocols and scientifically defined criteria. Drug surveillance activities have gained recognition, and reporting systems to identify drug safety problems have been strengthened. The understanding and management of drug safety is, nonetheless, beset by doubts, disagreements, and disputes. Conflict occurs over the significance of risk, the adequacy of evidence, the methodologies used to evaluate and measure risk, the standards that guide regulation, and the optimal means of communicating risk information to the public.

Donald Shoup brilliantly overcame the challenge of writing about parking without being boring in his iconoclastic 800-page book *The High Cost of Free Parking*. Easy to read and often entertaining, the book showed that city parking policies subsidize cars, encourage sprawl, degrade urban design, prohibit walkability, damage the economy, raise housing costs, and penalize people who cannot afford or choose not to own a car. Using careful

analysis and creative thinking, Shoup recommended three parking reforms: (1) remove off-street parking requirements, (2) charge the right prices for on-street parking, and (3) spend the meter revenue to improve public services on the metered streets. Parking and the City reports on the progress that cities have made in adopting these three reforms. The successful outcomes provide convincing evidence that Shoup's policy proposals are not theoretical and idealistic but instead are practical and realistic. The good news about our decades of bad planning for parking is that the damage we have done will be far cheaper to repair than to ignore. The 51 chapters by 46 authors in *Parking and the City* show how reforming our misguided and wrongheaded parking policies can do a world of good. This book proposes a new interdisciplinary understanding of urban design in China based on a study of the transformative effects of socio-spatial design and planning on communities and their governance. This is framed by an examination of the social projects, spaces, and realities that have shaped three contexts critical to the understanding of urban design problems in China: the histories of "collective forms" and "collective spaces", such as that of the urban danwei (work-unit), which inform current community building and planning; socio-spatial changes in urban and rural development; and disparate practices of "spatialised governmentality". These contexts and an attendant transformation from planning to design and from government to governance, define the current urban design challenges found in the dominant urban xiaoqu (small district) and shequ (community) development model. Examining the histories, transformations, and practices that have shaped socio-spatial epistemologies and experiences in China - including a specific sense of community and place that is rather based on a concrete "collective" than abstract "public" space and underpinned by socialised governance - this book brings together a diverse range of observations, thoughts, analyses, and projects by urban researchers and practitioners. Thereby discussing emerging interdisciplinary urban design practices in China, this book offers a valuable resource for all academics, practitioners, and stakeholders with an interest in socio-spatial design and development.

Reflective Planning Practice: Theory, Cases, and Methods uses structured, first-person reflection to reveal the artistry of planning practice. The value of professional reflection is widely recognized, but there is a difference between acknowledging it and doing it. This book takes up that challenge, providing planners' reflections on past practice as well as prompts for reflecting in the midst of planning episodes. It explains a reflection framework and employs it in seven case studies written by planning educators who also practice. The cases reveal practical judgments made during the planning episode and takeaways for practice, as the planners used logic and emotion, and applied convention and invention. The practical judgments are explained from the perspective of the authors' personal experiences, purposes, and professional style, and their interpretation of the rich context that underpins the cases including theories, sociopolitical aspects, workplace setting, and roles. The book seeks to awaken students and practitioners to the opportunities of a pragmatic, reflective approach to planning practice.

Failure to comply with parking restrictions disrupts traffic, increases road congestion, heightens risks of accidents and delays public transport schedules. The Committee's report considers a number of measures required to improve parking enforcement policy in Britain, including the key recommendation that we need to move to a single country-wide system of decriminalised parking enforcement (in place of the current dual system of localised enforcement where parking policy is administered by local authorities in some areas and by the police in others). Although transferring responsibility for parking enforcement to local government has succeeded in raising levels of enforcement and compliance, poor administrative practices causes driver frustration and wastes resources, and threatens to bring the decriminalised parking regime into disrepute. Other

recommendations include: the establishment of clear performance standards in applying parking restrictions; improved recruitment, remuneration and training to ensure the development of a professional parking service; greater transparency in the procedure for challenging penalty charge notices and an increased awareness of the role of the parking adjudication service; and the need for local authorities to develop parking strategies which meet local objectives, focusing on congestion targets, road safety and accessibility issues.
