The Bass Handbook Guitarist's Guide to Maintenance & Repair Model Predictive Control (MPC) usually refers to a class of control algorithms in which a dynamic process model is used to predict and optimize process performance, but it is can also be seen as a term denoting a natural control strategy that matches the human thought form most closely. Half a century after its birth, it has been widely accepted in many engineering fields and has brought much benefit to us. The purpose of the book is to show the recent advancements of MPC to the readers, both in theory and in engineering. The idea was to offer guidance to researchers and engineers who are interested in the frontiers of MPC. The examples provided in the first part of this exciting collection will help you comprehend some typical boundaries in theoretical research of MPC. In the second part of the book, some excellent applications of MPC in modern engineering field are presented. With the rapid development of modeling and computational technology, we believe that MPC will remain as energetic in the future.

Space planning involves much more than sketching a preliminary floor plan. A designer must take a client's programming needs into account and must also consider how other factors such as building codes and environmental factors affect a spatial composition. Space Planning Basics, now in its Third Edition, offers a highly visual, step-by-step approach to developing preliminary floor plans for commercial spaces. The book provides tools for visualizing space and walks the designer through other considerations such as building code requirements and environmental control needs. Specific programming techniques covered include matrices, bubble diagrams, CAD templates, block plans, and more. New to this edition are coverage of the basics of stair design, an essential aspect for planning spaces.

Als Zeitgenosse von Arnold Schönberg und Kurt Weill war Max Brand eine Figur zwischen Spätromantik, Futurismus und aufbrechendem Elektronikzeitalter. Der Kulturbruch durch die Nationalsozialisten, vor denen er ab 1937 aus Wien floh und schließlich in Rio de Janeiro landete, setzte einer viel versprechenden Karriere als Opernkomponist ein Ende. 1940 siedelte er sich in New York an, wo er seinen Visionen einer elektronischen Musikmaschine für die Bühne nachging. Viele Versuche führten nicht weiter, einer davon war ein optischer Synthesizer mit selbstgezeichneten Kurvenformen, schließlich das Moogtonium, ein an das Mixturtrautonium Oskar Salas angelehnter, von Robert A. Moog gebauter Synthesizer. Die Entwicklungsarbeit an der Maschine zog sich viel zu lange hin, sodass Brand seinen Traum, ein elektronisches Ein-Mann-Orchester für die Opernbühne zu haben, nie realisieren konnte. 1975 kehrte er nach Österreich zurück, wo er in Langenzersdorf lebte und 1980 verstarb. As a contemporary of Arnold Schönberg and Kurt Weill, Max Brand was a figure shaped by late romanticism, futurism, and the early electronic age. The cultural upheaval caused by the Nazis, from whom he fled from Vienna to Rio de Janeiro in 1937, put an end to a very promising career as an opera composer. In 1940 he settled in New York, where he worked to realize his visions of an electronic music machine for the stage. There were many attempts, which all fell short, one of these was an optical synthesizer with waveforms he drew himself, and finally the Moogtonium, a synthesizer based on Oskar Sala's Mixtur-Trautonium and engineered by Robert A. Moog. But development took much too long, and Brand was never able to fulfill his dream of an electronic one-man-orchestra for the opera stage. In 1975 he returned to Austria, where he lived in Langenzersdorf until his death in 1980.

Live Looping in Musical Performance offers a diverse range of interdisciplinary perspectives on the application of live looping technology by lusophone performers and composers. This book explores various aspects, including the aesthetic component, instrumentation, and setup, highlighting the versatility of this technology in music-making. Written by musicians and researchers from Portuguese-speaking countries, this book comprises eleven chapters that delve into various musical contexts, genres, and practices. The novelty of including collaborative texts written alongside non-professional researchers offers the possibility of drawing from real experience to consider how live looping has been changing and "cyborgising" the concept of music, the ritual of the performance, the identity of the musicians, and the public's expectations. Live Looping in Musical Performance provides cutting-edge reading for composers and performers, as well as ethnomusicologists, students, and researchers working in the areas of music production, technology, and performance. This book addresses a broader audience, both academic and non-academic, who are interested in new processes of musical creativity in a post-human world.
