Drawing on a three-year post-critical ethnography, this volume counters deficit-based notions of disability to present a new social and dialogic theory of thinking and learning for students with significant support needs. Dismantling ideas around ableism/disabledness, Social and Dialogic Thinking and Learning offers a uniquely theoretical and conceptual contribution to special education and capability research. Illustrating how students exhibit varied practical, social, and creative abilities, possess agency and perform identity, chapters present a challenge to the restrictive ways in which disability is constructed through prescriptive forms of teacher-student interaction and instruction. The text ultimately offers a powerful re-imagining of how educators and researchers can perceive, observe, and respond to students beyond current institutional and cultural norms. This text will benefit researchers, academics, and educators with an interest in inclusion and special educational needs, disability studies, and the theories of learning more broadly. Those specifically interested in educational psychology and the study of severe, profound, and multiple learning difficulties will also benefit from this book.

The way that students with cognitive disabilities have been supported has evolved in this country over time. Schools and other service facilities that support these students have changed. In the past, students with disabilities were not allowed the same opportunities to learn as students without disabilities. These students were placed in alternative schools or self-contained classrooms. Today, the placement of students in schools varies, as students are either in self-contained classrooms, or placed in inclusive classes with their non-disabled peers for all or part of the school day. The shift towards a more inclusive classroom setting for students with special needs stems from the desire to educate students with disabilities within the least restrictive environment (LRE). LRE is an important principle of the Individuals with Disabilities Education Act (IDEA). The intent of IDEA is to provide accommodations or modifications for students with disabilities to help them access the general education curriculum and meet their needs within the LRE which is constantly changing the way classrooms are setup to effectively meet student's needs. The least restrictive environment is the environment in which students with special needs receive their education in general education settings with students of the same age who do not have a disability.

Written by an expert in the field who is both a teacher and a teacher-educator, this book is an in-depth and practical resource for educators and parents who wish to introduce music to children

with hearing loss. Author Lyn Schraer-Joiner makes a compelling case for offering music education to children with hearing loss before presenting a series of important and up-to-date teaching strategies meant to inform their educational experience, including preparations for the classroom, communication strategies for parents and teaching staff, and tips on more specific or technical matters such as conducting musical audiograms. These resources provide a solid background for hands-on instructional materials such as music lessons, supplemental activities, educational resources, discussion points, and journal samples for the classroom and home. Schraer-Joiner goes to great lengths to offer detailed, purposeful suggestions for specific classroom settings such as general music, choral ensemble, and instrumental ensemble as well as a set of recommended listening lessons that take this potential variety of settings into account. Furthermore, Schraer-Joiner provides suggestions for incorporating music into everyday activities and also presents an overview of recent research which reinforces the benefits of music upon social and emotional development as well as speech and language development. Each chapter concludes with a section entitled "For Your Consideration" which features review questions, ideas, and instructional activities that teachers and parents can accomplish with deaf and hard of hearing children. The book's "Kids Only" online component provides deaf and hard-of-hearing children with descriptions of the many opportunities available to them in the arts, inspirational case studies and stories, as well as important ideas and topics for deaf and hard-of-hearing children to consider discussing with the teachers, family members, and healthcare professionals that they work with. The message of this book is a powerful one particularly in this day and age. As hearing aid and cochlear implant technologies improve and become increasingly widespread, all teachers--especially music teachers--should expect to see more deaf and hard-of-hearing children in their classrooms. Awareness and preparation are not only vital in aiding these children in the classroom, but are in fact required of teachers by federal law. This book is a comprehensive resource for teachers and parents who wish to gain a better understanding of the emerging field of music education for students with hearing loss.
