Mechanical Ventilation Study Cengage Learning This practical, engaging book provides concise, real life-tested guidance to healthcare teams concerned with widely reported and incentivized hospital quality and safety metrics, offering both a

conceptual approach and specific advice and frameworks for reviewing quality and safety numerator events, from the perspective and experience of clinicians and administrators working within the Ochsner Health System. The text opens with the rationale for closely managing widely (including publicly) reported hospital patient quality and safety measures. Attention is given to the financial implications of quality performance, with respect

to both penalties and payment incentives used by payer organizations. It then reviews the major public ratings and their relevant methodologies, including CMS, AHRQ and NSHN. In addition, it addresses ratings by proprietary organizations that have a large member clientele, such as Vizient, USNews, Leapfrog, Healthgrades, CareChex and others. Each metric - for example, the AHRQ Patient Safety Indicators (PSIs), and other metrics such as readmission rate, risk adjusted

complications, hospital-acquired conditions and mortality - is addressed in a stand-alone chapter. For each, the importance, approach to review, opportunity for optimization, and engagement of healthcare staff are reviewed and discussed. Overall, this book forefronts the benefits of a collaborative approach within a health system. The concurrent review process, multidisciplinary collaboration among quality improvement, clinical documentation,

coding and medical staff personnel are all emphasized. Also described in detail is the approach to and specific opportunities for medical staff education and engagement. Additional key topics include Engagement of the Medical Staff and House Staff (i.e., residents and other trainees), Futile Care, Surgical Quality Improvement (NSQIP), Nursing Provider Partnership, and Translation of Data Review to Successful Performance

Improvement. Specialty chapters on pediatric, neurologic and transplant quality metrics are also included.

ICD-10-CM/PCS Coding: Theory and Practice, 2016 Edition - E-Book

Mechanical Ventilation and the Daily Cost of ICU Care Abstract: Background Intensive care units represent one of the largest clinical cost centers in hospitals. Mechanical ventilation accounts for a significant share of this cost. There is a relative dearth of information quantifying

the impact of ventilation on daily ICU cost. We thus determine daily costs of ICU care, incremental cost of mechanical ventilation per ICU day, and further differentiate cost by underlying diseases.

Methods Total ICU costs, length of ICU stay, and duration of mechanical ventilation of all 10,637 adult patients treated in ICUs at a German hospital in 2013 were analyzed for never-ventilated patients (N = 9181), patients ventilated at least 1 day, (N = 1455) and all patients (N = 10,637).

Total ICU costs were regressed on the number of ICU days. Finally, costs were analyzed separately by ICD-10 chapter of main diagnosis. Results Daily non-ventilated costs were €999 (95%CI €924 - €1074), and ventilated costs were €1590 (95%CI €1524 - €1657), a 59% increase. Costs per non-ventilated ICU day differed substantially and were lowest for endocrine, nutritional or metabolic diseases (€844), and highest for musculoskeletal diseases (€1357). Costs per

ventilated ICU day were lowest for diseases of the circulatory system (€1439) and highest for cancer patients (€1594). The relative cost increase due to ventilation was highest for diseases of the respiratory system (94%) and even non-systematic for patients with musculoskeletal diseases (13%, $p = 0.634$).
 Conclusions Results show substantial variability of ICU costs for different underlying diseases and underline mechanical ventilation as an important driver of ICU

These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS. These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided

within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act

(HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be

reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.
