first novel for children brings out all the ingredients of the classic ghost story within a recognisable modern world setting. Readers of his short story collections for children will find in *Childish Spirits* the elements which made his past books such a success – strong and contemporary characters, inventive twists on traditional themes, and a winning combination of action, suspense and humour.

World of Warcraft: Stormrage Simon and Schuster

Unless a food is grossly contaminated, consumers are unable to detect through sight or smell the presence of low levels of toxic chemicals in their foods. Furthermore, the toxic effects of exposure to low levels

of chemicals are often manifested slowly, sometimes for decades, as in the case of cancer or organ failure. As a result, safeguarding food from such hazards requires the constant monitoring of the food supply using sophisticated laboratory analysis. While the food industry bears the primary responsibility for assuring the safety of its products, the overall protection of people's diets from chemical hazards must be considered one of the most important public health functions of any government. Unfortunately, many countries do not have sufficient capability and capacity to monitor the exposure of their populations to many potentially toxic

chemicals that could be present in food and drinking water. Without such monitoring, public health authorities in many countries are not able to identify and respond to problems posed by toxic chemicals, which may harm their population and undermine consumer confidence in the safety of the food supply. From a trade perspective, those countries that cannot demonstrate that the food they produce is free of potentially hazardous chemicals will be greatly disadvantaged or even subject to sanctions in the international marketplace. The goal of a total diet study (TDS) is to provide basic information on the levels and trends of exposure to chemicals

in foods as consumed by the population. In other words, foods are processed and prepared as typical for a country before they are analyzed in order to better represent actual dietary intakes. Total diet studies have been used to assess the safe use of agricultural chemicals (e.g., pesticides, antibiotics), food additives (e.g., preservatives, sweetening agents), environmental contaminants (e.g., lead, mercury, arsenic, cadmium, PCBs, dioxins), processing contaminants (e.g., acrylamide, polycyclic aromatic hydrocarbons, chloropropanols), and natural contaminants (e.g., aflatoxin, patulin, other mycotoxins) by determining whether

dietary exposure to these chemicals are within acceptable limits. Total diet studies can also be applied to certain nutrients where the goal is to assure intakes are not only below safe upper limits, but also above levels deemed necessary to maintain good health. International and national organizations, such as the World Health Organization, the European Food Safety Agency and the US Food and Drug Administration recognize the TDS approach as one of the most cost-effective means of protecting consumers from chemicals in food, for providing essential information for managing food safety, including food

standards, and for setting priorities for further investment and study. Total Diet Studies introduces the TDS concept to a wider audience and presents the various steps in the planning and implementation of a TDS. It illustrates how TDSs are being used to protect public health from chemicals in the food supply in many developed and developing countries. The book also examines some of the applications of TDSs to specific chemicals, including contaminants and nutrients.

Titan Books

In her New York Times bestseller, *The Shattering*, Christie Golden delivers a sensational tie-in to the newest World of Warcraft game expansion. Thrall, wise shaman and the

warchief of the Horde, has sensed a disturbing change... Long ago, Azeroth's destructive native elementals raged across the world until the benevolent titans imprisoned them within the Elemental Plane. Despite the titans' intervention, many elementals have ended up back on Azeroth. Over the ages, shaman like Thrall have communed with these spirits and, through patience and dedication, learned to soothe roaring infernos, bring rain to sun-scorched lands, and otherwise temper the elementals' ruinous influence on the world of Azeroth. Now Thrall has discovered that the elementals no longer heed the shaman's call. The link shared with these spirits has

grown thin and frayed, as if Azeroth itself were under great duress. While Thrall seeks answers to what ails the confused elements, he also wrestles with the orcs' precarious future as his people face dwindling supplies and growing hostility with their night elf neighbors. Meanwhile, King Varian Wrynn of Stormwind is considering violent action in response to mounting tensions between the Alliance and the Horde, a hard-line approach that threatens to alienate those closest to him, including his son, Anduin. The conflicted young prince has set out to find his own path, but in doing so, he risks becoming entangled in political instability that is setting the world on

edge. The fate of Azeroth's great races is shrouded in a fog of uncertainty, and the erratic behavior of the elemental spirits, troubling though it is, may only be the first ominous warning sign of the cataclysm to come.

From #1 New York Times bestselling author Brandon Sanderson, the *Mistborn* series is a heist story of political intrigue and magical, martial-arts action. Three hundred years after the events of the *Mistborn* trilogy, Scadrial is now on the verge of modernity, with railroads to supplement the canals, electric lighting in the

streets and the homes of the wealthy, and the first steel-framed skyscrapers racing for the clouds. The Bands of Mourning are the mythical metal minds owned by the Lord Ruler, said to grant anyone who wears them the powers that the Lord Ruler had at his command. Hardly anyone thinks they really exist. A kandra researcher has returned to Elendel with images that seem to depict the Bands, as well as writings in a language that no one can read. Waxillium Ladrian is recruited to travel south to the city of New Seran to investigate. Along the way he discovers hints that point to the true goals of his uncle Edwain and the shadowy organization known as The Set.

Edward Moon no longer commands the respect that he did in earlier times. Still, each night he returns to the stage of his theater to amaze his devoted, albeit dwindling, audience, aided by his partner, the Somnambulist—a silent, hairless, hulking giant who, when stabbed, does not bleed. But these are strange, strange times in England, with the oddest of sorts prowling London's dank underbelly. And the very bizarre death of a disreputable actor has compelled a baffled police constabulary to turn once again to Edward Moon for help—invariably setting in motion events that will shatter his increasingly tenuous grasp on reality. **The Fantastic Imagination** Matador

A couple's future hangs in the balance as they wait for a train in a Spanish café in this short story by a Nobel and Pulitzer Prize-winning author. At a small café in rural Spain, a man and woman have a conversation while they wait for their train to Madrid. The subtle, casual nature of their talk masks a more complicated situation that could endanger the future of their relationship. First published in the 1927 collection *Men Without Women*, "Hills Like White Elephants" exemplifies Ernest Hemingway's style of spare, tight prose that continues to win readers over to this day.

[Sharing The Land Of Canaan](#) Bastion Press, Inc.

Over 110 species of mammals roamed the forests, mountains, and deserts of this ancient "Land of Canaan"—Jordan, Israel, Syria, Lebanon, Palestine. Their impact on humans can be seen in cave drawings made by the Neanderthal inhabitants of northern Palestine some 200,000 years ago and gleaned from the writings of all Near Eastern civilizations. In recent centuries, encroachment by an increasing human population has resulted in the extinction of several species—aurochs (wild ox), red deer, onagers, Syrian wild asses, roebucks (roe deer), fallow deer, Syrian brown bears, and cheetahs. Currently at risk are such large

mammals as the leopard, wolf, wild cat, caracal, ibex, and desert gazelles as well as many small mammals especially small carnivores, insectivores, and bats. *Mammals of the Holy Land*, summarizes the information that is known about the mammals that inhabit this historic land. with keys to identification, a glossary of terms, a basic introduction to the study of mammals,

and a discussion of the impact these mammals have had on humans, as well as taxonomic and natural history information for each species, this book will be useful to both the professional and non-professional.
