In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments

of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

The Patient Protection and Affordable Care Act (ACA) was designed to increase health insurance quality and affordability, lower the uninsured rate by expanding insurance coverage, and reduce the costs of healthcare overall. Along with sweeping change came sweeping criticisms and issues. This book explores the pros and cons of the Affordable Care Act, and explains who benefits from the ACA. Readers will learn how the economy is affected by the ACA, and the impact of the ACA rollout.

The second edition of *Health Insurance Resources: A Guide for People with Chronic Disease and Disability* continues to be a uniquely helpful reference for those who need and use health insurance most often but have the least access to it. The book was developed to assist individuals living with disability and chronic health conditions, as well as health care professionals, in understanding the health care system and maximizing their rights and entitlements within that system. The manual is completely updated throughout, and reflects the changes in the system since the first edition's publication in 2003. Crucially, the book includes new information about the new Medicare Prescription Drug Coverage plan, which took effect in January 2006. It also covers: Social Security Disability Insurance and Supplemental Security Income COBRA HIPAA State High Risk, Pools Insurance glossary State pharmacy assistance programs And much, much more! This essential guide contains information about a wide variety of options that will be of assistance to individuals who are uninsured, underinsured, or who have questions about insurance and don't know where to begin. It will also serve those who work with chronically ill individuals and their families, such as health care professionals and para-professionals, consumer and patient advocates, and the educators and institutions that serve them.
