The life of Patricia Highsmith was as secretive and unusual as that of many of the best-known characters who people her "peerlessly disturbing" thrillers and short stories. Yet even as her work has found new popularity in the last few years, the life of this famously elusive writer has remained a mystery. For *Beautiful Shadow*, the first biography of Highsmith, British journalist Andrew Wilson mined the vast archive of diaries, notebooks, and letters she left behind, astonishing in their candor and detail. He interviewed her closest friends and colleagues as well as some of her many lovers. But Wilson also traces Highsmith's literary roots in the work of Poe, noir, and existentialism, locating the influences that helped distinguish Highsmith's writing so startlingly from more ordinary thrillers. The result is both a serious critical biography and one that reveals much about a brilliant and contradictory woman, one who despite her acclaim and affairs always maintained her solitude.

International quality printing on specially imported paper Why this book has been written ... FEA is gaining popularity day by day & is a sought after dream career for mechanical engineers. Enthusiastic engineers and managers who want to refresh or update the knowledge on FEA are encountered with volume of published books. Often professionals realize that they are not in touch with theoretical concepts as being pre-requisite and find it too mathematical and Hi-Fi. Many a times these books just end up being decoration in their book shelves ... All the authors of this book are from IITs & IISc and after joining the industry realized gap between university education and the practical FEA. Over the years they learned it via interaction with experts from international community, sharing experience with each other and hard route of trial & error method. The basic aim of this book is to share the knowledge & practices used in the industry with experienced and in particular beginners so as to reduce the learning curve & avoid reinvention of the cycle. Emphasis is on simple language, practical usage, minimum mathematics & no pre-requisites. All basic concepts of engineering are included as & where it is required. It is hoped that this book would be helpful to beginners, experienced users, managers, group leaders and as additional reading material for university courses.

Dr. Freddie L. Thomas was a historian and a scientist, an inventor and an author, a book collector, a composer, civil rights leader, and a scholar -- who had mastered the art of teaching. Born in Virginia, he studied at Virginia State University, Wagner College, Albany Medical School, and the University of Rochester. He did significant biological research at the Eastman Kodak Company and at the University of Rochester, but was also known as an authority in Afro-American and Jewish cultural history. The focus of the biography is not specifically centered on the scientific aspects of Dr. Thomas's life, but also the political and social environments of the communities he encountered. Equally significant, he reached out to young people, both from prominent and poor families (including gang members) to teach them, the importance of obtaining a quality education. He spent an enormous amount of time with youths teaching them everything from basic rudiments of English

and mathematics to complex mathematics, physics, philosophy, and religion. It was his way to seek out youngsters in the streets, get them interested in learning and then teaching them, if they were willing to apply themselves. He tutored all kinds of people in all kinds of places. Although, he never had a teaching certificate and never received any financial compensation in return. He didn't do it because he was after any gain of money or power. It was his natural way of living. He was indeed, a Silent Leader. Dr. Thomas died in 1974.

The power consumption of integrated circuits is one of the most problematic considerations affecting the design of high-performance chips and portable devices. The study of power-saving design methodologies now must also include subjects such as systems on chips, embedded software, and the future of microelectronics. Low-Power Electronics Design covers all major aspects of low-power design of ICs in deep submicron technologies and addresses emerging topics related to future design. This volume explores, in individual chapters written by expert authors, the many low-power techniques born during the past decade. It also discusses the many different domains and disciplines that impact power consumption, including processors, complex circuits, software, CAD tools, and energy sources and management. The authors delve into what many specialists predict about the future by presenting techniques that are promising but are not yet reality. They investigate nanotechnologies, optical circuits, ad hoc networks, e-textiles, as well as human powered sources of energy. Low-Power Electronics Design delivers a complete picture of today's

methods for reducing power, and also illustrates the advances in chip design that may be commonplace 10 or 15 years from now.

'KUMBA AFRICA', is a compilation of African Short Stories written as fiction by Sampson Ejike Odum, nostalgically taking our memory back several thousands of years ago in Africa, reminding us about our past heritage. It digs deep into the traditional life style of the Africans of old, their beliefs, their leadership, their courage, their culture, their wars, their defeat and their victories long before the emergence of the white man on the soil of Africa. As a talented writer of rich resource and superior creativity, armed with in-depth knowledge of different cultures and traditions in Africa, the Author throws light on the rich cultural heritage of the people of Africa when civilization was yet unknown to the people. The book reminds the readers that the Africans of old kept their pride and still enjoyed their own lives. They celebrated victories when wars were won, enjoyed their New yam festivals and villages engaged themselves in seasonal wrestling contest etc; Early morning during harmattan season, they gathered firewood and made fire inside their small huts to hit up their bodies from the chilling cold of the harmattan. That was the Africa of old we will always remember. In Africa today, the story have changed. The people now enjoy civilized cultures made possible by the influence of the white man through his scientific and technological process. Yet there are some uncivilized places in Africa whose people haven't tested or felt the impact of civilization. These people still maintain their ancient traditions and culture. In everything, we believe that days when people paraded barefooted in Africa to the swamp to tap palm wine and fetch firewood from there farms are almost fading away. The huts are now gradually been replaced with houses built of blocks and beautiful roofs. Thanks to modern civilization. Donkeys and camels are no longer used for carrying heavy loads for merchants. They are now been replaced by heavy trucks and lorries. African traditional methods of healing are now been substituted by hospitals. In all these, I will always love and remember Africa, the home of my birth and must respect her cultures and traditions as an AFRICAN AUTHOR.
