Convex optimization problems arise frequently in many different fields. This book provides a comprehensive introduction to the subject, and shows in detail how such problems can be solved numerically with great efficiency. The book begins with the basic elements of convex sets and functions, and then describes various classes of convex optimization problems. Duality and approximation techniques are then covered, as are statistical estimation techniques. Various geometrical problems are then presented, and there is detailed discussion of unconstrained and constrained minimization problems, and interior-point methods. The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for solving them. It contains many worked examples and homework exercises and will appeal to students, researchers and practitioners in fields such as engineering, computer science, mathematics, statistics, finance and economics.

These and similar questions about tests and their uses have forced those advocating change to examine the way in which mathematical performance data is gathered and used in American schools. This book provides recent views on the issues surrounding mathematics tests, such as the need for valid performance data, the implications of the Curriculum and Evaluation Standards for School Mathematics for test development, the identification of valid items and tests in terms of the Standards, the procedures now being used to construct a sample of state assessment tests, gender differences in test taking, and methods of reporting student achievement.

##### **Mathematics Assessment and Evaluation** SUNY Press

A New York Times–bestselling author looks at mathematics education in America—when it's worthwhile, and when it's not. Why do we inflict a full menu of mathematics—algebra, geometry, trigonometry, even calculus—on all young Americans, regardless of their interests or aptitudes? While Andrew Hacker has been a professor of mathematics himself, and extols the glories of the subject, he also questions some widely held assumptions in this thought-provoking and practical-minded book. Does advanced math really broaden our minds? Is mastery of azimuths and asymptotes needed for success in most jobs? Should the entire Common Core syllabus be required of every student? Hacker worries that our nation's current frenzied emphasis on STEM is diverting attention from other pursuits and even subverting the spirit of the country. Here, he shows how mandating math for everyone prevents other talents from being developed and acts as an irrational barrier to graduation and careers. He proposes alternatives, including teaching facility with figures, quantitative reasoning, and understanding statistics. Expanding upon the author's viral New York Times op-ed, *The Math Myth* is sure to spark a heated and needed national conversation—not just about mathematics but about the kind of people and society we want to be. "Hacker's accessible arguments offer plenty to think about and should serve as a clarion call to students, parents, and educators who decry the one-size-fits-all approach to schooling." —Publishers Weekly, starred review

An inside look at America's most controversial charter schools, and the moral and political questions around public education and school choice. The promise of public education is excellence for all. But that promise has seldom been kept for low-income children of color in America. In *How the Other Half Learns*, teacher and education journalist Robert Pondiscio focuses on Success Academy, the network of controversial charter schools in New York City founded by Eva Moskowitz, who has created something unprecedented in American education: a way for large numbers of engaged and ambitious low-income families of color to get an education for their children that equals and even exceeds what wealthy families take for granted. Her results are astonishing, her methods unorthodox. Decades of well-intended efforts to improve our schools and close the "achievement gap" have set equity and excellence at war with each other: If you are wealthy, with the means to pay private school tuition or move to an affluent community, you can get your child into an excellent school. But if you are poor and black or brown, you have to settle for "equity" and a lecture—about fairness. About the need to be patient. And about how school choice for you only damages public schools for everyone else. Thousands of parents have chosen Success Academy, and thousands more sit on waiting lists to get in. But Moskowitz herself admits Success Academy "is not for everyone," and this raises uncomfortable questions we'd rather not ask, let alone answer: What if the price of giving a first-rate education to children least likely to receive it means acknowledging that you can't do it for everyone? What if some problems are just too hard for schools alone to solve?
