"Savvy and insightful." --New York Times  
 Technology has become the architect of our intimacies. Online, we fall prey to the illusion of companionship, gathering thousands of Twitter and Facebook friends, and confusing tweets and wall posts with authentic communication. But this relentless connection leads to a deep

solitude. MIT professor Sherry Turkle argues that as technology ramps up, our emotional lives ramp down. Based on hundreds of interviews and with a new introduction taking us to the present day, *Alone Together* describes changing, unsettling relationships between friends, lovers, and families.

### **The Science and Passion of Communism** MacMillan

This book is a collection about cultural-historical activity theory as it has been developed and applied by Yrjö Engeström. The work of Engeström is both rooted in the legacy of Vygotsky and Leont'ev and focuses on current research concerns that are related to learning and development in work practices. His publications cross various disciplines and develop intermediate theoretical tools to deal with empirical questions. In this volume, Engeström's work is used as a springboard

to reflect on the question of the use, appropriation, and further development of the classic heritage within activity theory. The book is structured as a discussion among senior scholars, including Y. Engeström himself. The work of the authors pushes on classical activity theory to address pressing issues and critical contradictions in local practices and larger social systems.

*Multicultural Dynamics and the Ends of History* provides a strikingly original reading of key texts in the philosophy of history by Kant, Hegel, and Marx, as well as strong arguments for why these texts are still relevant to understanding history today. Réal Fillion offers a critical exposition of the theses of these three authors on the dynamics and the ends of history, in order to provide an answer to the question: "Where are we headed?"

Grounding his answer in the twin observations that the world is becoming increasingly multicultural and increasingly unified, Fillion reasserts the task of the speculative philosophy of history as it had been understood by German philosophy: the articulation and understanding the historical process as a developmental whole. Fillion's interpretation engages many recent strands of social and political thought in order to provide a new understanding of current events, and possible futures, grounded in the understanding of the dynamics of the past and the present provided by Kant, Hegel, and Marx. The result is a rich and timely answer to the question of where our world is headed today.

"Biodegradable Poly (Lactic Acid): Synthesis, Modification, Processing and Applications" describes the preparation, modification, processing, and the research and applications of biodegradable poly (lactic acid), which belong to the biomedical and environment-friendly materials. Highly illustrated, the book introduces systematically the synthesis, physical and chemical modifications, and the latest developments of research and applications of poly (lactic acid) in biomedical materials. The book is intended for researchers and graduate students in the fields of materials science and engineering, polymer science and engineering, biomedicine, chemistry, environmental sciences, textile science and engineering, package materials, and so on. Dr. Jie Ren is a professor at the Institute of Nano and Bio-Polymeric Materials, School of Material Science and Engineering, Tongji University, Shanghai, China.

*10,000 Dreams Interpreted* Springer Science & Business Media

Amadeo Bordiga was one of the greatest figures of the Third Communist International. The Science and Passion of Communism presents his Soviet and internationalist battles in the revolutionary post-WWI period until that against Stalinism, and those in the post-WWII period against the triumphant U.S. capitalism and for an original, updated representation of Marxist critique of political economy.

*Restful Insomnia* Courier Corporation  
Classic analysis of the foundations of statistics and development of personal probability, one of the greatest controversies in modern statistical thought. Revised edition. Calculus, probability, statistics, and Boolean algebra are recommended.

**On Genetic Interests** University of Ottawa Press

Breast cancer is the most frequent cancer of women in the western hemisphere. This book presents a new imaging modality of the breast which improves the possibilities of mammography at a very high level: Cancers can be detected at a very early stage y MRM. The huge number of breast biopsies can be reduced dramatically. Even tiny breast cancers (e.g.3mm) can be detected. The prognosis for women with breast cancer will improve due to earlier detection.

*The 2022 Global Energy Agenda* Conari Press

This publication "sheds light on the phenomenon of research in the visual arts. In 'artistic research,' practical acts (the making) and theoretical reflection (the thinking) go hand in hand, in a manner similar to creating and thinking being inextricably linked with artistic practice. -- This volume has been written from the perspective of art as practice. The majority of the authors are artists, while several artists provided visual contributions that elucidate the phenomenon of research in art. There are also contributions from theoreticians, who analyse how artistic research works (and how it is productive)"- -P.[3] of cover.

Policy Press

Addresses the question of valuation theoretically and through empirical analysts of diverse objects of valuations such as university rankings, ice skating scoring, wind power, insurance, gold, and big data.

*Digital Electronics with VHDL (Quartus II Version)* Routledge

A refreshing aspect of Gosset's letters is that they reveal his likable and modest character: he describes his own contribution to the 1914-18 war as 'to brew Guinness stout in such a way as to waste as little labour and material as possible'. Similarly, his dislike of controversy is illustrated in his letters written at the time of publication of Fisher's Statistical methods for research workers, but which still serve to show Gosset's own strong views on the book.

*The Foundations of Statistics* OECD Publishing

From an evolutionary perspective, individuals have a vital interest in the reproduction of their genes. Yet this interest is overlooked by social and political theory at a time when we need to steer an adaptive course through the unnatural modern world of uneven population growth and decline, global mobility, and loss of family and communal ties. In modern Darwinian theory, bearing

children is only one way to reproduce. Since we share genes with our families, ethnic groups, and the species as a whole, ethnocentrism and humanism can be adaptive. They can also be hazardous when taken to extremes. On Genetic Interests canvasses strategies and ethics for conserving our genetic interests in an environmentally sustainable manner sensitive to the interests of others.

*Multicultural Dynamics and the Ends of History* Routledge

A global mindset is 'a set of individual attributes that enable an individual to influence individuals, groups, and organizations from diverse socio/cultural/institutional systems'. This book intends to explore the content of a global mindset, how it is developed, when and how it should be applied, and what its consequences are.

*The Global Mindset* BRILL

Another title in this popular series of 'Tests that teach', designed to help improve students' exam performance and increase language competence at Proficiency level. Fully Revised for the Cambridge ESOL Proficiency 2013 exam, there is now an option to buy this testbuilder to include access to Macmillan Practice Online.

*Waterfront Regeneration* Oxford University Press, USA

This facsimile edition collects all 19 issues of 'Art-Rite' magazine, edited by art critics Walter Robinson and Edit DeAk from 1973 to 1978. Robinson, DeAk and a third editor, Joshua Cohn, met as art history students at Columbia University, and were inspired to found the magazine by their art criticism teacher, Brian O'Doherty. 'Art-Rite', cheaply produced on newsprint, served as an important alternative to the established art magazines of the period. 'Art-Rite' ran for only five years, and published only 19 issues. But in that time the magazine featured contributions from hundreds of artists, a list that now reads like a who's-who of 1970s art: Yvonne Rainer, Gordon Matta-Clark, Alan Vega (Suicide), William Wegman, Nancy Holt, Jack Smith, Dorothea Rockburne, Robert Morris, Adrian Piper, Laurie Anderson, Carolee Schneemann and Carl Andre; critics such as Lucy Lippard contributed writing. Through its single-artist issues and its thematic issues on performance, video and artists' books, 'Art-Rite' championed the new art of its era.

**Art-Rite** OXFORD

Citizen science, the active participation of the public in scientific research projects, is a rapidly expanding field in open science and open innovation. It provides an integrated model of public knowledge production and engagement with science.

As a growing worldwide phenomenon, it is invigorated by evolving new technologies that connect people easily and effectively with the scientific community. Catalysed by citizens' wishes to be actively involved in scientific processes, as a result of recent societal trends, it also offers contributions to the rise in tertiary education. In addition, citizen science provides a valuable tool for citizens to play a more active role in sustainable development. This book identifies and explains the role of citizen science within innovation in science and society, and as a vibrant and productive science-policy interface. The scope of this volume is global, geared towards identifying solutions and lessons to be applied across science, practice and policy. The chapters consider the role of citizen science in the context of the wider agenda of open science and open innovation, and discuss progress towards responsible research and innovation, two of the most critical aspects of science today.

*Decentralization and School Improvement*  
Cambridge University Press

Insomnia has meant nights of frustration-- until now. A new program, Restful

Insomnia, helps insomniacs mimic the benefits of sleep so they can greet the mornings refreshed. If you are among the 70 million sleep-deprived Americans who do battle every night, take heart! This book will show you how to use your waking night hours to quiet your mind, replenish your creativity, and relax deeply. You'll come to accept your insomnia and discover how to derive enough of the benefits of sleep to be able to get up in the morning feeling refreshed.

[Evaluation and Aid Effectiveness No 5 - Evaluation Feedback for Effective Learning and Accountability](#)

*Evaluation and Aid Effectiveness No 5 - Evaluation Feedback for Effective Learning and Accountability*  
This book provides an overview of the theory, practice and context of entrepreneurship and innovation at both the industry and firm level. It provides a foundation of ideas and understandings designed to shape the reader's thinking and behaviour to better appreciate the role of innovation and entrepreneurship in modern economies, and to recognise their own abilities in this regard. The book is aimed at students studying advanced levels of entrepreneurship, innovation and related fields as well as practitioners (for

example, managers, business owners). As entrepreneurship and innovation are largely indivisible elements and cannot be adequately understood if studied separately, the book provides the reader with an overview of these elements and how they combine to create new value in the market. This edition is updated with recent international research, including research and examples from Europe, the US, and the Asia-Pacific region.

*Resources for College Libraries*

HarperCollins Publishers

The course that gets students talking - now available in American English.

**Retraining and Upgrading Workers** JAI Press Incorporated

Sponsored by the Consortium for Policy Research in Education Drawing on theoretical models, case studies, and comparative analyses of other sectors and countries, the authors argue that governance reforms are likely to have little impact on what actually happens in schools, and they tell why decentralized structural arrangements alone are unlikely to establish conditions necessary for general improvement in educational practice.
