Coach Education and Development in Sport Human Kinetics

As sport has become more intense, professional and commercialized so have the debates grown about what constitutes acceptable behaviour and fair play, and how to encourage and develop 'good' sporting behaviour, particularly in children and young people. This book explores the nature and function of values in youth sport and establishes a framework through which coaches, teachers and researchers can develop an understanding of the decision-making processes of young athletes and how they choose between playing fairly or cheating to win. The traditional view of sport participation is that it has a beneficial effect on the social and moral development of children and young people and that it intrinsically promotes cultural values. This book argues that the research evidence is more subtle and nuanced. It examines the concept of values as central organizing constructs of human behaviour that determine our priorities, guide our choices, and transfer across situations, and considers the value priorities and conflicts that are so useful in helping us to

understand behaviour in sport. The book argues that teachers and professionals working with children in sport are centrally important agents for value transmission and change and therefore need to develop a deeper understanding of how sport can be used to encourage pro-social values, and offers suggestions for developing a curriculum for teaching values through sport in differing social contexts. Spanning some of the fundamental areas of sport practice and research, including sport psychology, sport pedagogy, practice ethics, and positive youth development through sport, and including useful values and attitudes questionnaires and guidance on their use and interpretation, this book is important reading for any student, researcher, coach or teacher with an interest in youth sport or physical education.

Clinical Sport Psychology will provide readers with an assortment of tools to use in evaluating and working with athletes. The text addresses a range of athletes' issues in an informed and integrated approach to sport psychology. Rather than focusing on one problem area, one modality of intervention, or one aspect of professional practice, *Clinical Sport Psychology* blends grounded theory and sound research with effective assessment and intervention practices, presenting empirically informed intervention guidelines specific to various needs of athletes. This text provides the foundation needed for working with athletes experiencing a range of nonclinical, subclinical, and clinical issues. Readers will learn to thoroughly assess athletes, identify and understand their needs, and appropriately intervene with each athlete—unless a referral is necessary to better meet an athlete's individual needs. *Clinical Sport Psychology* contains the following features: -A thorough explanation of the Mindfulness-Acceptance-Commitment (MAC) approach to enhancement of sport performance -A detailed examination of the empirical support for traditional procedures in sport psychology -A detailed and practical understanding of the Integrative Model of Athletic Performance (IMAP), which integrates clinical and sport science -A firm understanding of the Multilevel Classification System for Sport Psychology (MCS-SP), a model to classify the wide range of athletes' issues -A clear organizational structure from theory through intervention, including special considerations *Clinical Sport Psychology* presents a new way of thinking about the psychological processes that are involved in attaining and maintaining sport expertise. The text, based on clinical and sport research, bridges the gap between clinical and sport psychologists by presenting a model that connects athletic performance, basic psychological processes, and relevant empirical findings. This cutting-edge text promotes a greater understanding of the varying dimensions of clinical phenomena and how nonclinical, subclinical, and clinical issues affect athletic performance and the overall well-being of athletes. Whether helping athletes improve competitive performance, adjust to the changing demands of the athletic environment, or clarify clinical issues, sport psychologists will find valuable insight and direction from this text. Part I integrates relevant knowledge in clinical and sport science, laying the foundation for practice in clinical sport psychology. Part II shows how to assess and classify athletes' issues beyond the traditional assessment approaches in sport psychology. It includes a new and useful approach to the holistic assessment of cases, thereby leading to sound intervention decisions and strategies for case formulation. Part III delves into intervention guidelines for the full range of problems and issues that the practicing clinical sport psychologist will face, and it offers both innovative and empirically informed interventions for a variety of client needs. Part IV examines special considerations in clinical sport psychology, including ethics, professional development, supervision, and future directions for the profession. With 30 years of ongoing practical experience with professional athletes, the authors present an integrated and holistic approach to clinical sport psychology, guiding readers in understanding, effectively assessing, and appropriately intervening with athletic clientele.

Sport psychological training, an important part of athletes' preparation, can give them the final edge in competition. This book provides a systematic structure for conducting sport psychological

interventions that can be followed not only by sport psychologists, but also by athletes and coaches. The authors describe sport psychological measures that are based on scientific knowledge and have proven to be valuable in their applied work. The book is divided into two main parts. Part 1 presents the basic structure for sport psychological interventions and Part 2 focuses on concrete interventions and training measures. Part 1 further addresses the importance of personality factors for sports performance, illustrates how an athlete's personality development can be enhanced, gives basic knowledge about diagnostic tools, and discusses talent selection. The second part of the book describes basic training, which focuses mainly on relaxation techniques, as well as skills training, essential for the stabilisation of athletic performance. Maintaining a balanced recovery-stress state is particularly important for the avoidance of overtraining. The book illustrates how athletes' stress and recovery levels can be monitored in order to prevent overtraining. Part 2 further addresses how critical situations in an athlete's career (including, for example, conflicts, career termination, and injuries) are to be handled, presenting various impact interventions, including clinical hypnosis. The final chapter of the book presents a mental toolbox, giving the practitioner an overview that will help to quickly identify a problem, its possible causes, and solutions.
