 The cool thing
 about science
 is that it
 describes
 what's
 happening all
 around us, all
 the time.
 Sometimes,
 though, kids
 find it hard to
 connect what
 they know
 about science
 to the real
 world. These
 easy science
 experiments
 for kids can be
 done at home,
 with everyday
 household
 items, to show
 kids that the
 abstract
 concepts they

may have
 hard about
 actually have
 influence over
 their normal,
 everyday
 lives. Next
 time your kids
 are looking for
 fun indoor
 activities, set
 up one of
 these
 experiments
 and watch
 them be
 amazed -- we
 tried to find
 DIY projects
 that have a
 flair for the
 dramatic. This
 book covers
 experiments
 to learn about
 the following:
 * Apple
 Oxidation *
 Chromatograp
 hy Flowers *
 Water Walking
 * Pencils

Through a Bag
 of Water
 ...And much
 more!! Enjoy
 the
 experiments,
 and have fun
 teaching your
 children about
 science and
 knowing they
 are enjoying
 it. Get your
 copy now!

Experiments

Book Enslow Publishing, LLC
A boy, a science project and an answer to a critical problem. During monsoon season in Bangladesh, Iqbal's mother must cook the family's meals indoors, over an open fire, even though the smoke makes her and the family sick. So when Iqbal hears that his school's science fair has the theme of sustainability, he comes up

with the perfect idea for his entry: he'll design a stove that doesn't produce smoke! Has Iqbal found a way to win first prize in the science fair while providing cleaner air and better health for his family at the same time? Sometimes it takes a kid to imagine a better idea — make that an ingenious one!

Weird & Wonderful Science Experiments
My First
How fast can you run? How

fast are you growing? How fast do you read? There are many things in the world around you that are moving fast! But how do you measure them? The ideas in this book will help you perform exciting and fun experiments. Some will even give you ideas for your science fair. Using simple materials, you can do everything a scientist does: conduct experiments, keep records, and draw conclusions

from what you have learned. You will then be ready to discover the fast world around you!

Contains great projects to get the reader started on a great science fair experiment.

How to Walk on Water and Climb up Walls

National Geographic Books
What keeps objects from floating out of your hand? What if your feet drifted

away from the ground? What stops everything from floating into space? Gravity. As in his previous books, *Redwoods*, *Coral Reefs*, and *Island*, Jason Chin has taken a complex subject and made it brilliantly accessible to young readers in this unusual, innovative, and very beautiful book. Chin's approach makes this book a must-have common core tool for teachers and

librarians introducing scientific principals to young students. A Neal Porter Book

Discovering the secrets of animal movement and what they can teach us
Insects walk on water, snakes slither, and fish swim. Animals move with astounding grace, speed, and versatility: how do they do it, and

what can we learn from them? In *How to Walk on Water and Climb up Walls*, David Hu takes readers on an accessible, wondrous journey into the world of animal motion. From basement labs at MIT to the rain forests of Panama, Hu shows how animals have adapted and evolved to traverse their environments, taking advantage of physical laws with results that are startling and ingenious. In

turn, the latest discoveries about animal mechanics are inspiring scientists to invent robots and devices that move with similar elegance and efficiency. Hu follows scientists as they investigate a multitude of animal movements, from the undulations of sandfish and the way that dogs shake off water in fractions of a second to the seemingly crash-resistant characteristics

of insect flight. Not limiting his exploration to individual organisms, Hu describes the ways animals enact swarm intelligence, such as when army ants cooperate and link their bodies to create bridges that span ravines. He also looks at what scientists learn from nature's unexpected feats—such as snakes that fly, mosquitoes that survive rainstorms, and dead fish that swim

upstream. As researchers better understand such issues as energy, flexibility, and water repellency in animal movement, they are applying this knowledge to the development of cutting-edge technology. Integrating biology, engineering, physics, and robotics, *How to Walk on Water and Climb up Walls* demystifies the remarkable mechanics behind animal

locomotion. *Amazing Science Experiments* Sterling Publishing Company "Experiments for young children to conduct to learn about science"--[First Place Science Fair Projects for Inquisitive Kids](#) Storey Publishing Your winning project is inside! Book jacket. **Physics Experiments for Children** MoonDance Press With these 100 proven projects, students will

have a really winning science fair experience--and hone their analytical skills, too. Best of all, the author makes even the most complicated subjects--such as DNA research--marvelously clear. The wide range of topics offers something for everyone: the many faces of acids and bases, the science of life (cells, enzymes, algae), perfect plant projects, the nature of hot and cold, chemical conundrums,

and lots more. Students can construct a solar oven in a pizza box, figure out how many phone books can balance on a couple of eggshells, concoct a "snail salad," and other blue-ribbon ideas.

Curlee Girlee
Simon and Schuster
Curlee Girlee's hair makes her mad! She wants it to grow down her back like spaghetti, not sideways and all curly-whirly. Curlee Girlee wants to look like everybody

else- and she'll try anything to solve her problem. Then one day she discovers that her curly hair is perfect just the way it is. Curlee Girlee doesn't need to look like everyone else to be beautiful.

It's starting to warm up! That means kids are starting to want to play outside a little more and we,

as parents, want to send them outside. However, sometimes the kids need a little help entertaining themselves in the great outdoors!! "Outdoor Science Experiments" will share some great outdoor science experiments for kids that will keep them engaged and learning while they play. This book includes: S'more Oven, Chalk Rockets, Square Bubbles, Sand Volcano, Walking Water Experiment,

Rock Candy,
Crystal Egg,
The Leakproof
Bag, Lava
Lamps.

Going green is
a hot
topic...and a
hot science
fair project.
Author and
scientist
Elizabeth
Snoke Harris
knows what
impresses,
and she
provides
plenty of
winning ideas,
along with
step-by-step
guidance to
insure that the
end result is a
success. Show
how to
harness
energy with
windmills,
make a biogas
generator,
and create
alternative
fuels.
Demonstrate

green power
with recycled
paper, solar
building, and
compact
fluorescent
light bulbs.
Test the
ozone, be a
"garbage
detective,"
and discuss
how to
reverse global
warming. The
importance of
what children
learn will go
even beyond
the science
fair: they'll
have the
knowledge to
understand
what's
happening to
Planet
Earth...and
the desire to
do something
eco-friendly
every day.
