Adventures in Architecture Gramercy
After her nightmarish recovery from a
serious car accident, Faye gets horrible
news from her doctor, and it hits her hard
like a rock: she can't bear children. In
extreme shock, she breaks off her
engagement, leaves her job and confines
herself in her family home. One day, she
meets her brother's best friend, and her

soul makes a first step to healing.

"This treasury surveys nearly three
hundred years of quilt history, techniques,
patterns, and styles. Traveling all over the
country to conduct research and to collect
quilts, the authors have assembled a richly
illustrated study of traditional quilts."

"From the simple, serviceable quilts of the
early colonists to the work of twentieth
century quilters, this volume surveys
virtually every type of quilt and pattern,
detailing the techniques, tools, fabrics,
and dyes. The abundant historical and
practical information offers guidelines for
establishing the age of antique quilts and
provides careful instructions for cleaning
and care of heirloom quilts."--BOOK

Considered the Bible of rod building
Essential guide for fishermen making their
own rods Especially useful for the
experienced custom builder Have you ever
wondered what it would feel like to have a
rod that feels like a part of you and not
just a tool? Have you ever wanted to make
your own fishing rod that rivals those in
stores? If you answered "yes" to either
question, this book is absolutely for you.
Dale P. Clemens encourages all fishermen
to have a rod that is specifically
customized for his or her style. *Advanced
Custom Rod Building* is the guide you need
to make your own. This guide highlights
the key points needed to make tackle that
is better than anything that could be

bought in a store. It also includes clear illustrations, figures, and tables to help the experienced custom builder. Clemens shares techniques for building rods used in all conditions, whether light freshwater or heavy surf. Thanks to this book, building your own custom rod that will be beautiful and durable isn't a mystery. Skyhorse Publishing is proud to publish a broad range of books for fishermen. Our books for anglers include titles that focus on fly fishing, bait fishing, fly-casting, spin casting, deep sea fishing, and surf fishing. Our books offer both practical advice on tackle, techniques, knots, and more, as well as lyrical prose on fishing for bass, trout, salmon, crappie, baitfish, catfish, and more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other publishers and to authors whose work might not otherwise find a home.

Dan takes us to the buildings he believes have changed the world, revealing how in truly great buildings function, material and

purpose connect to all other parts of life - showing how architecture is the richest and most complex of man's artistic endeavours. Do his chosen buildings live up to expectation, or does he find disappointment and lost ideals?

Architecture is an art, a science and a craft. But buildings also have to fulfil a function, cater for human use, withstand the forces of nature, and be built to a budget. Dan considers all these aspects as he looks at places, some well known, many less so, as varied as the Catherine Palace in St Petersburg, the Minaret of Jam in Afghanistan, the Hanging Temple in Shanxi in China, Astana in Kazakhstan, Brasilia, Neuschwanstein Castle in Bavaria, the Lupanare Brothels in Pompeii, and the building of an igloo, man's earliest exercise in the creation of shelter, in Greenland.

Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level

tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Centrally planned economies (CPEs) account for about a third of the world's population and about a fourth of its output. In view of their importance in the world economy, they need to be included

in international comparative studies. Their inclusion, however, presents problems for several reasons. First, CPEs report net material product, not gross national product (GNP). Also, their prices are set and exchange rates are set administratively, so that conversion to dollars is problematic. Finally, they compute growth rates using methods that in most cases are strongly upward biased. This report tries to identify and evaluate alternative methods for computing the levels and growth rates of the GNPs of centrally planned economies and to undertake illustrative benchmark year computations.

The most complete telling of one of the most significant campaigns of the Pacific War and Australia's role in it. 'Java is heaven, Burma is hell, but you never come back alive from New Guinea' - Japanese military saying The capture of Lae was the most complex operation for the Australian army in the Second World War. In many ways it was also a rehearsal for the D-Day

invasion of France, with an amphibious landing combined with the first successful large-scale Allied airborne operation of the war. D-Day New Guinea brings together the extraordinary stories of the Australian, American and Japanese participants in this battle, and of the fight against the cloying jungle, the raging rivers and the soaring mountain ranges that made New Guinea such a daunting battlefield. Phillip Bradley brings a compelling clarity, humanity and new insight into a little known but crucial Australian battle of the Pacific War.
