"We have never seen teachers work harder than we do now. These tools inspire kids to work as hard as we are." -Kate Roberts and Maggie Beattie Roberts What's DIY Literacy? It's making your own visual teaching tools instead of buying them. It's using your teaching smarts to get the most from those tools. And it's helping kids think strategically so they can be DIY learners. "Teaching tools create an impact on students' learning," write Kate Roberts and Maggie Beattie Roberts. "They help students hold onto our teaching and become changed by the work in the classroom." Of course, you and your students need the right tools for the job, so first Kate and Maggie share four simple, visual tools that you can make. Then they show how to maximize your instructional know-how with suggestions for using the tools to: make your reading and writing strategies stick motivate students to reach for their next learning goal differentiate instruction simply and quickly. Kate and Maggie are like a friendly, handy neighbor. They offer experience-honed advice for using the four tools for assessment, small-group instruction, conferring, setting learning goals, and, most important, helping students learn to apply strategies and make progress without prompting from you. In other words, to do it themselves. "It is our greatest hope," write Kate and Maggie, "that the tools we offer here will help your students to work hard, to hold onto what they know, and to see themselves in the curriculum you teach." Try DIY Literacy and help your readers and writers take learning into their own hands.

The first Cambridge Workshop on Universal Access and Assistive Technology (CWUAAT) was held at Trinity Hall, Cambridge, in March 2002. It was inspired by the earlier, highly successful Cambridge Workshops on Rehabilitation Robotics organised by the late Robin Jackson. Robin was the founder of Rehabilitation Research at Cambridge which now continues in the Engineering Design Centre within the Department of Engineering, led by John Clarkson and Simeon Keates, and in the Rainbow Group within the Computer Laboratory led by Peter Robinson. CWUAAT represents the first in a new series of workshops that we are aiming to hold every two years which, reflecting the spirit of recent moves to extend the rights for universal accessibility, will encourage discussion of a broad range of interests. There will be a general focus on product/solution development. Hence it is intended that the principal requirements for the successful design of assistive technology shall be addressed, where these range from the identification and capture of the needs of the users, through to the development and evaluation of truly usable and accessible systems for users with special needs. The best submissions received for the first CWUAAT are contained in this book, where the contributors are all leading researchers in the fields of Universal Access and Assistive Technology and represent a large part of the international research community. They include, though not exclusively, computer scientists, designers, engineers, industrial representatives, ergonomists and sociologists.

DIY Hints and Tips is a book that no one should be without. For both the seasoned handyman and those who have no flair for things DIY, this book will be a very useful source of information when tackling everyday chores around the home and garden, such as removing mildew in the bathroom, replacing a broken windowpane or making a temporary pipe repair. The aim of the book is to provide sufficient information to get you started with simple DIY tasks and to encourage you to do little jobs in the home without having to call in and pay exorbitant prices for an expert's advice and services. Much of doing it yourself is simply being able to think around corners a little, so the hints and tips are designed to make things somewhat easier, especially for those without much DIY knowledge. A wide range of subjects has been incorporated including a section on the tools you should have in order to do small DIY tasks around the house. Some of the main topics include woodwork, metalwork, electricity, plumbing, painting and door hardware. Hints and tips on basic safety, security, your car and first aid also feature in the book. DIY Hints and Tips has been compiled with both men and women in mind. By the time the man of the house returns home, his partner will already have put up that shelf herself with the help of this book - and it will stay up!

The Routledge Handbook of Corpus Linguistics 2e provides an updated overview of a dynamic and rapidly growing area with a widely applied methodology. Over a decade on from the first edition of the Handbook, this collection of 47 chapters from experts in key areas offers a comprehensive introduction to both the development and use of corpora as well as their ever-evolving applications to other areas, such as digital humanities, sociolinguistics, stylistics, translation studies, materials design, language teaching and teacher development, media discourse, discourse analysis, forensic linguistics, second language acquisition and testing. The new edition updates all core chapters and includes new chapters on corpus linguistics and statistics, digital humanities, translation, phonetics and phonology, second language acquisition, social media and theoretical perspectives. Chapters provide annotated further reading lists and step-by-step guides as well as detailed overviews across a wide range of themes. The Handbook also includes a wealth of case studies that draw on some of the many new corpora and corpus tools that have emerged in the last decade. Organised across four themes, moving from the basic start-up topics such as corpus building and design to analysis, application and reflection, this second edition remains a crucial point of reference for advanced undergraduates, postgraduates and scholars in applied linguistics.

A systematic theory of DIY electronic culture, drawn from a century of artists who have independently built creative technologies. Since the rise of Arduino and 3D printing in the mid-2000s, do-it-yourself approaches to the creative exploration of technology have surged in popularity. But the maker movement is not new: it is a historically significant practice in contemporary art and design. This book documents, tracks, and identifies a hundred years of innovative DIY technology practices, illustrating how the maker movement is a continuation of a long-standing creative electronic subculture. Through this comprehensive exploration, Garnet Hertz develops a theory and language of creative DIY electronics, drawing from diverse examples of contemporary art, including work from renowned electronic artists such as Nam June Paik and such art collectives as Survival Research Laboratories and the Barbie Liberation Front. Hertz uncovers the defining elements of electronic DIY culture, which often works with limited resources to bring new life to obsolete objects while engaging in a critical dialogue with consumer capitalism. Whether hacking blackboxed technologies or deploying culture jamming techniques to critique commercial labor practices or gender norms, the artists have found creative ways to make personal and political statements through creative technologies. The wide range of innovative works and practices profiled in Art + DIY Electronics form a general framework for DIY culture and help inspire readers to get creative with their own adaptations, fabrications, and reimaginings of everyday technologies.
