 Praxis II Early Childhood Education Practice Questions are the simplest way to prepare for your Praxis II test. Practice is an essential part of preparing for a test and improving a test taker's chance of success.

The best way to practice taking a test is by going through lots of practice test questions. Another advantage of taking practice tests is that you can assess your performance and see if you need to study and practice more. Our Praxis II Early Childhood Education Practice Questions give you the opportunity to test your knowledge on a set of questions. You can know everything that is going to be covered on the test and it will not do you any good on test day if you have not had a chance to practice. Repetition is a key to success and using

practice test questions allows you to reinforce your strengths and improve your weaknesses. Detailed answer explanations are also included for each question. It may sound obvious, but you have to know which questions you missed (and more importantly why you missed them) to be able to avoid making the same mistakes again when you take the real test. That's why our Praxis II Early Childhood Education Practice Questions include answer keys with detailed answer explanations. These in-depth answer explanations will allow

you to better understand any questions that were difficult for you or that you needed more help to understand.

the concepts, procedures, principles, and vocabulary that the Educational Testing Service (ETS) expects you to have mastered before sitting for your exam. -- From product description. [Praxis II Middle School: Content Knowledge Practice Questions: Praxis II Practice Tests & Exam Review for the Praxis II: Subject Assessments](#) Mometrix Media LLC This study concerns the "highly qualified teacher" provisions of the "Elementary and Secondary Education Act" ("ESEA," 2002), as reauthorized, and other policies at the federal, state and local levels, which have aimed to elevate the content knowledge of teachers. This examination of "Praxis II" score trends was not meant to serve as an evaluation of "ESEA" or of any of the other policies instituted at the state or local levels; the study served simply as an effort to examine trends in a systemic outcome that all of these policies have aimed to influence--the content knowledge of prospective teachers. More specifically, this report answers the following questions: (1) Have the demographic and/or performance

characteristics of individuals who took each test changed across the years included? Total sample size, proportions by gender and race, percent passing, and experience breakdowns are reported; (2) Do mean "Praxis" scores differ by gender, race, and experience? Additionally, do the mean passing scores for those who pass differ substantially from those who do not pass as well as from the mean passing scores of all candidates considered together?; (3a) Across years, is there any evidence of a trend in "Praxis" scores for those who pass? How do these trends compare with the trends of those who do not pass?; and (3b) Does including the factors of gender, race, and experience variables in the analytic model help to explain any observed trends? Key findings include: (1) For the "Praxis" tests examined in this study, there is little change in mean test scores observed over time; (2) Those who pass "Praxis" tests have scores substantially higher than those who do not; (3) It is critical to separate those who pass from those who do not in order to make sense of trends; (4) Score

trends are inconsistent across tests; (5) There has been an increase in the number of individuals taking the "Praxis II" tests and the increase is seen both among individuals with teaching experience and without teaching experience; (6) Race and ethnicity differences are consistent across tests; (7) Race and ethnicity differences are not disaggregated by gender because of small sample sizes in some of the cells; (8) Gender differences vary by test; (9) For most of the states examined in this study, passing standards are related to mean passing scores and passing rates in predictable ways; (10) Experience effects vary across tests; (11) Experience factors are relatively small except for the Middle School Mathematics test; and (12) The large, positive trends in SAT scores by "Praxis II" candidates observed in prior research are not echoed here in similarly large positive trends in "Praxis II" scores. Appended are: (1) Initial Year of "Praxis" Test Use by State for Each Assessment; (2) Passing Score Established by Each State for Each Assessment by Year; and (3) "Praxis" Registration
