Boxing Plato's Shadow: An Introduction to the Study of Human Communication Elsevier Health Sciences

Organizations, Communication, and Health focuses on theories and constructs of organizational communication and their relationship to health. The goal of the volume is to offer a current picture of organizational and organizing processes and practices related to health. Research in the area of health communication has expanded in recent years, and this research has advanced understandings of campaigns, patient/provider interactions, and social support. However, a gap in the area of health,

organizations, and organizing processes emerged, a niche this volume fills. It does so by having chapters identify an organizational theory or organizing process and how aspects of that theory relate to health. Chapters discuss how to marry theory to practice and the other factors (e.g., organizational structure, role, occupation, industry, or environment) that need to be considered in the process of utilizing the theory in organizations. This volume, aimed at advanced undergraduate and graduate students studying health communication, as well as health professionals, provides useful theory and practice related the organizations and health, and issues a call for further theorizing on the practice of health communication in organizations.

This comprehensive text offers a broad view of health care policy, health services delivery and organization, and health care management. Drawing on the insights of over 100 scholars and leading practitioners, it highlights organizational changes reflected in health care mergers, networks, and affiliations and describes the role of funding agencies in the direct provision of services. Providing over 2350 references, tables, and drawings, the book charts the influences of managed care on provisions, funding, and the configuration of providers and services, and portrays the increasingly influential and challenging role of health administrators.

Conflict Resolution for the Helping Professions Oxford University Press

We live in a world of inequalities. Every day, people are born to intensely degrading realities that curb their opportunities of

success and perpetrate a vicious cycle of poverty. "The Role of Institutions: Devising Mechanisms for an Inclusive World" explores how the institutional framework contributes to the maintenance or reduction of such inequalities, analyzing the impacts – both positive and negative – of existing institutions in specific scenarios. Each of the eight articles approaches a pressing theme of the international agenda – including rule of law; fiscal responsibility; health conditions in refugees' camps; disaster risk management; labor standards; gender-based structural violence; nuclear weapons control; and state failure –, analyzing the role institutions play on the definition of the fate of countries and their citizens.

Barsky's hands-on text provides the theory, skills, and exercises to prepare readers for an array of conflict situations. It encourages developing professionals to see themselves as reflective practitioners in the roles of negotiators, mediators, advocates, facilitators, and peacebuilders. Readers will learn how to analyze conflict situations and develop theory-based strategies that can be used to intervene in an ethical and effective manner. Examples and exercises demonstrate how to apply conflict resolution skills when working with individuals, families, groups, organizations, and diverse communities. Conflict Resolution for the Helping Professions is the only current conflict resolution textbook designed specifically for social work, psychology, criminal justice, counseling, and related professions.

The Future of Nursing explores how nurses' roles, responsibilities,

and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

The Leadership Shadow Walter de Gruyter GmbH & Co KG

Improving access to justice has been an ongoing process, and on-demand justice should be a natural part of our increasingly on-demand society. What can we do for example when Facebook blocks our account, we're harassed on Twitter, discover that our credit report contains errors, or receive a negative review on Airbnb? How do we effectively resolve these and other such

issues? Digital Justice introduces the reader to new technological tools to resolve and prevent disputes bringing dispute resolution to cyberspace, where those who would never look to a court for assistance can find help for instance via a smartphone. The authors focus particular attention on five areas that have seen great innovation as well as large volumes of disputes: ecommerce, healthcare, social media, labor, and the courts. As conflicts escalate with the increase in innovation, the authors emphasize the need for new dispute resolution processes and new ways to avoid disputes, something that has been ignored by those seeking to improve access to justice in the past.

The Second Edition of this classic resource on conflict resolution combines research, conceptual models, practitioner experience, and stories that highlight the core conflict competencies. The book underscores the importance for leaders to develop the critical skills they need to help them, their colleagues, and their organizations deal more effectively with conflict and move their organizations forward. This new edition expands on the conflict competence model, includes new tools and techniques, shows how to develop conflict competent teams and organizations, and offers a new online assessment.

Designed to introduce students to the academic discipline of Communication, this text describes the scope and methods of communication studies, and sketches its history from the work of the early sophists to contemporary research efforts. Boxing Plato's Shadow helps explain why, despite its long and venerable history of scholarly endeavor, Communication continues to

struggle for recognition of its legitimate place in the academy. Throughout, the authors emphasize the field's durability over more than two millennia and the merits of multiple systematic approaches to the study of communication.

What Political Science Can Learn from the Humanities Elsevier Health Sciences

In today's fast paced, interconnected, and mercilessly competitive business world, senior executives have to push themselves and others hard. Paradoxically, to succeed as leaders, they also need to relate to others very well. Under stress and challenge, the qualities executives have relied on to get them to the top and to achieve outstanding results can overshoot into unhelpful drives that lead to business and personal catastrophes. The Leadership Shadow draws on the lived experience of executives to make sense of what actually happens when their drivers overshoot and they act out the dark side of leadership. It shows how executives can find stability in the face of uncertainty, resilience in the face of gruelling demand, and psychological equilibrium as a leader in the face of turbulence.

Today, there is a significant need for healthcare professionals across disciplines and sectors as the world faces unprecedented health challenges and adopts innovative healthcare technologies. Despite this demand for a competent and eager healthcare workforce, the education and processes to becoming a qualified healthcare professional are complex and intricate, which may turn people away from this path due to confusion, fear, or doubt. In order to encourage and support those involved in medical education, further study on the best practices and challenges of developing confident and capable health professionals is required. The Handbook of Research on Developing

Competencies for Pre-Health Professional Students, Advisors, and Programs provides insight into the critical skills and expertise essential for those interested in pursuing employment in healthcare as well as current procedures and training to support them during their academic and professional careers. Covering topics such as lifelong learning skills, healthcare professions, and strategic learning, this major reference work is crucial for advisors, nurses, healthcare professionals, academicians, researchers, practitioners, scholars, instructors, and students.

This textbook is an interdisciplinary collection of scholarly and religious articles about Asian American Christianity. Its four sections -- contexts, sites, identity, and voices -- offer in-depth understanding of both Catholic and Protestant traditions, practices, theologies, and faith communities. It also highlights diversity and complexity across lines of gender, generation, denomination, race and ethnicity in Asian American Christianity. *Asian American Christianity Reader* Routledge

Across America, universities have become big businesses—and our cities their company towns. But there is a cost to those who live in their shadow. Urban universities play an outsized role in America's cities. They bring diverse ideas and people together

and they generate new innovations. But they also gentrify neighborhoods and exacerbate housing inequality in an effort to enrich their campuses and attract students. They maintain private police forces that target the Black and Latinx neighborhoods nearby. They become the primary employers, dictating labor practices and suppressing wages. In the *Shadow of the Ivory Tower* takes readers from Hartford to Chicago and from Phoenix to Manhattan, revealing the increasingly parasitic relationship between universities and our cities. Through eye-opening conversations with city leaders, low-wage workers tending to students' needs, and local activists fighting encroachment, scholar Davarian L. Baldwin makes clear who benefits from unchecked university power—and who is made vulnerable. In the *Shadow of the Ivory Tower* is a wake-up call to the reality that higher education is no longer the ubiquitous public good it was once thought to be. But as Baldwin shows, there is an alternative vision for urban life, one that necessitates a more equitable relationship between our cities and our universities.
