The challenges in metro operations keep the operations managers on their toes to continually explore innovative ways to resolve the day-to-day issues and keep the organization sustainable. In absence of any precedence, often solutions are tried ab initio. The book presents comprehensive coverage of various operational issues such as running of trains, customer-centric timetabling, management of stations, depot, control

center, crew, collection of fare and non-fare revenue, maintenance of assets, human resources management, integrated transport, driverless trains, adoption of AI/ML/IoT, and predictive maintenance. The book is designed for transport professionals engaged in management of urban transportation services. It will also be very useful for students undertaking courses on Urban Transport and Railway Systems. KEY FEATURES

- Innovative O&M practices based on real-life experiences—case studies and examples included
- Emerging technologies in metro operations such as Driverless Operations, Artificial Intelligence, Internet of Things (IoT), and Predictive Maintenance
- Excel program to estimate human resources required to operate the metro rail system commensurate with the facilities created
- List of data and KPIs required to monitor the performance of a metro rail system

TARGET AUDIENCE

- Transport Professionals engaged in Metro and Railway Operations and Planning
- Students undertaking courses on Urban Transport and Railway Systems

Both public and private schools in the Philippines are using information technology (IT) as a tool to improve teaching and learning. While both government and private sector initiatives indicate national commitment to IT in education, there is little up-to-date information on how extensively the Philippines are using computers and for what purposes. The researcher's goals were to determine the extent to which Metro Manila public and private schools used IT and to determine how these results compared with analogous data on schools in other developing and developed countries. The researcher gathered data with mail-in

questionnaires adapted from the International Association for the Evaluation of Educational Achievement (IEA), onsite visits, and follow-up telephone interviews. The researcher also compared her results with those from IEA-surveyed countries. The researcher determined that actual uses of IT did not meet schools curricular goals. Although school officials wanted IT to individualize instruction, promote active learning, and improve student achievement, in actual practice, schools used computers to teach computer literacy, productivity tools, and programming. In terms of infrastructure, the researcher found that schools in Metro Manila had the poorest student-to-computer ratio in comparison to schools in IEA-surveyed countries. Metro Manila students access to peripherals was also poor. Software selections were limited to productivity tools. Students in Metro Manila primary schools, like their counterparts in IEA-surveyed countries, had limited Internet access. A comparison of results from public and private schools revealed that public and private schools shared many educational goals regarding the use of IT. However, the realization of these goals was uneven. Private schools had been using computers for a greater number of years than public schools. Private schools had lower student-to-computer and student-to-printer ratios. They also had greater Internet access. Furthermore, private schools tended to expose their students to computers at practically all educational levels. The study provided baseline data that was not previously available. The researcher identifies the need for similar studies with greater geographic scope or of a longitudinal nature, deeper investigations of curricular gaps or policy issues, and the development of instructional software for Filipino-specific subject

areas.

Find out everything you need to know about how current networks will have to evolve to provide for future broadband services In this book, the authors provide an overview of the status, challenges, architectures, and technological solutions for core and metropolitan networks. Furthermore, the book describes the current state of core and metropolitan telecommunication networks, as well as the drivers and motives behind the current paradigm shift in the telecommunications industry. Moreover, the authors elaborate system design guidelines for both point-to-point and multi-hop optical networks taking into consideration the analogue nature of the transmission channel. Key Features: Provides coverage of all aspects of core and metro networks supporting future broadband services, and a detailed description of the state-of-the-art Presents a clear path for migrating from point-to-point to data-centric, dynamic, multi-hop optical networks Shows how current systems will need to evolve over the coming years, summarizing challenges and issues to be investigated in future research Covers a wide range of topics from network architectures, to control plane, to key optical and optoelectronic devices, and best practice in transmission and system design Provides results, best practices and guidelines for various technical problems, including numerous hands-on examples Written by authors from cutting-edge companies such

as Alcatel-Lucent, Siemens, Lucent, France Telecom, BT, and Telefonica Optical Core and Metro Networks will be of interest to researchers in industry and academia, and advanced (final year undergraduate) and postgraduate students undertaking communications, networking and optics courses.
