Encyclopedia of Communities of Practice in Information Management John Wiley & Sons
Publisher Description Knowledge Management (KM) Processes in Organizations Springer
Science & Business Media Knowledge management is controlling the transfer, distribution, and availability of

knowledge. Traditionally, knowledge management processes are predefined; e.g. it is laid out in detail which document template, data structure, system, or work flow steps have to be used in order to manage knowledge. But knowledge management itself is complex. It is simply not possible to predefine the typical flow of work in knowledge intensive processes in advance. So rather than trying to determine the

procedures it is more promising to analyze which factors can be used in order to control the outcome of the knowledge management process. By respecting the lean knowledge management principles, developed and first presented within this book, any manager can control the success of knowledge management in a lean software project any time. Enterprise 2.0 and Web 2.0 technologies perfectly support the lean knowledge management principles, and far better than any traditional approach, based on text processors, presentation software, spreadsheets, and E-Mail can do. Together,

the lean knowledge management principles and Enterprise 2.0 form a new approach to knowledge management, which delivers value that can not be reached otherwise.

Advanced Topics in Information Resources Management, Volume 1 Springer

Every organization should have some method of capturing, storing, transforming, retrieving, and using knowledge and lessons learned. This book has been written to help managers throughout the organization to design and develop knowledge management systems that are effective and lasting. Successful knowledge management systems are integrated into the corporate culture and the existing information systems apparatus. They are introduced gradually, so as not to clutter the testing phase with too many details. And simple and appropriate metrics are utilized at each stage of the design and operating process. The book concludes with a

concise summary of all the necessary steps to ensure success.

This book establishes constructivist, interpretivist, and linguistic approaches based on conventions about the nature of qualitative and text

data, the author's influence on text interpretation, and the validity checks used to justify text interpretations. Vast quantities of text and qualitative data in organizations often go unexplored. Text analytics outlined in this book allow readers to understand the process of converting unstructured text data into meaningful data for analysis in order to measure employee opinions, feedback, and reviews through sentiment analysis to support fact-based decision making. The methods involve using NVivo and RapidMiner software to perform lexical analysis, categorization, clustering, pattern recognition, tagging, annotation, memo creation, information

extraction, association analysis, and visualization. The methodological approach in the book uses innovation theory as a sensitizing concept to lay the foundation for the analysis of research data, suggesting approaches for empirical exploration of organizational learning, knowledge management, and innovation practices amongst geographically dispersed individuals and team members. Based on data obtained from a private educational organization that has offices dispersed across Asia through focus group discussions and interviews on these topics, the author highlights the need for

integrating organizational learning, knowledge management, and innovation to improve organizational performance, exploring perspectives on collective relationships and networks, organizational characteristics and structures, and tacit and overt values which influence such innovation initiatives. In the process, the author puts forward a new theory which is built on three themes: relationship and networks, knowledge sharing mechanisms, and the role of social cognitive schema that facilitate emergent learning, knowledge management, and innovation. Artech House
Get your organization's expertise out of its

silos and make it flow-with lessons from over a decade of experience Looking at knowledge management in a holistic way, Mastering Organizational Knowledge Flow: How to Make Knowledge Sharing Work puts the proper emphasis on non-technical issues. As knowledge is deeply connected to humans, the author moves away from the often overused and therefore burned-out term "knowledge management" to the better-suited term "knowledge flow management." Provides lessons learned and case studies from real experience Discusses key knowledge flow components, success factors and traps, and where to start Covering topics such as the

power of scaling, internal marketing, measuring success, cultural aspects of sharing, and the role of Web2.0, Mastering Organizational Knowledge Flow: How to Make Knowledge Sharing Work allows you to stay up-to-date with today's knowledge flow management, and implement best practices to position your organization to take advantage of all of its assets. *Self-Knowledge and Knowledge Management Applications* CRC Press Process management affects the functioning of every organization and consequently affects each of us. This book focuses on the multi-disciplinary nature of process management by explaining its

theoretical foundations in relation to other areas such as process analysis, knowledge management, and simulation. A crucial linkage between theory and concrete methodology of Tabular Application Development (TAD) is presented as a practical approach consisting of five phases that deal with process identification and modeling, process improvement, development of a process management system and finally - monitoring and maintenance. This book is important for researchers and students of business and management information systems, especially those dealing with courses on process management or related fields.

Managers and professionals in process management will also find this book to be useful for their everyday business.

Springer

Knowledge Management (KM) is an effort to increase useful knowledge in the organization. It is a

natural outgrowth of late twentieth century movements to make organizational management and operations more effective, of higher quality, and more responsive to constituents in a rapidly changing global environment. This document traces the evolution of KM in organizations, summarizing the most influential research and literature in the field. It also presents an overview of selected common and current practices in knowledge management, including the relationship between knowledge management and decision making, with the intention of making a case for KM as a series of processes and not necessarily a

manipulation of things. The final section highlights the use of social networking and commonly adopted Web applications to increase the value of social capital and to connect practitioners with clients and colleagues. Automation: How to Implement Decision

Management in

Business Processes

describes a simple but

comprehensive methodology for decision management projects, which use business rules and predictive analytics to optimize and automate small, high-volume business decisions. It includes Decision Requirements Analysis (DRA), a new method for taking the crucial first step in any IT project to implement decision management: defining a set of business decisions and identifying all the information—business knowledge and data—required to make those decisions. Describes all the stages in automating business processes, from business process modeling down to the implementation of decision services. Addresses how to use business rules and

predictive analytics to optimize and automate small, high-volume business decisions. Proposes a simple "top-down" method for defining decision requirements and representing them in a single diagram. Shows how clear requirements can allow decision management projects to be run with reduced risk and increased profit. Nontechnical and accessible, Knowledge Automation reveals how DRA is destined to become a standard technique in the business analysis and project management toolbox.

In this competitive world, corporates work hard to know about every event happening around them. Events in our surroundings give us cues on opportunities as well as threats. Change is continuous. Every second world in changing around us. To stay competitive, companies can not afford to work in traditional ways. Corporates have to go for knowledge oriented automation where every departmental process flow like a river. Believe me implementing knowledge management in an organization is very

tough and tedious process. After all effort an organization puts, this process flow facilitates clear storage and documentation of data. Learning doesn't happen overnight. It comes with an experience and cost. Unlike classrooms, life first conducts exams then teaches lesson. But corporates cannot afford to fail in exams. It is about survival, economy and a lot more. Learning will come to help when data, information or knowledge is in its place to search all possible alternatives in complex situation. To stay competitive, two words knowledge management is the answer.
