Research Paper SO IGI

Global

Institutional research (IR) is a growing, applied, and interdisciplinary area that attracts people from a variety of fields, including computer programmers, statisticians, and administrators and faculty from every discipline to work in archiving, analyzing, and reporting on all aspects of higher education information systems. Cases on Institutional Research Systems is a reference book for institutional research, appealing to novice and expert IR professionals and the administrators and policymakers that rely on their data. By presenting a variety of institutional perspectives, the book depicts the challenges and solutions to those in higher education administration, and state,

federal, and even international accreditation. Texas City Channel, Galveston Bay Area CCH When this book was first published in 1982, there were approximately eleven million Spanish-speaking people in the United States. This volume constitutes a comprehensive and accessible set of readings on the Spanish spoken in the United States. The authors examine various aspects of language structure and language use by the American Chicano, Puerto Rican and Cuban populations. Chapters include descriptions of language variation, reports of language contact and language change and analyses of the ethnography of language use in bilingual communities with particular emphasis on code-switching. Several chapters explore the educational implications of language structure and

language use. This collection will be of interest to a wide range of linguists, anthropologists and sociologists. Bilingual educators and language planners in bilingual communities will find it of particular value and students of sociolinguistics will discover in it the main trends of sociolinguistic analysis usefully exemplified.

"This study of the South Texas Outer Continental Shelf (STOCS) was conducted on behalf of the U.S. Bureau of Land Management...The resultant data from this investigation represent the first step in understanding how to assess and control the impact of petroleum exploration and development in the STOCS area. The central goal of these and other environmental quality surveys of continental shelf areas is the protection of the living marine sources from deleterious effects"--Page iii.

Natural habitats for wildlife in Texas and the many species they support are dwindling at an alarming rate as an ever-growing population continues to develop the land for commercial, industrial, and agricultural uses. To take stock of our current wildlife and land resources, identify challenges facing them, and offer strategies for future management and conservation, this book

presents over twenty-five essays by experts from a wide range of governmental and private organizations involved in wildlife policy and management. Modeled on the proceedings of a 1982 wildlife symposium published by the Texas Chapter of The Wildlife Society, this book updates and expands the issues involved in wildlife and land use. The chapters are grouped into five sections--perspectives on Texas wildlife resources, future expectations in land use, the public and future demands for wildlife, wildlife management and research, and wildlife management on public lands. The diverse and sometimes competing viewpoints presented here will be important reading for everyone concerned with managing land for wildlife.

Resources in Education University of Texas Press
The purpose of this study was to examine the self-perception of leadership styles of practicing female superintendents in Texas and how their preferred leadership style affected their performance. The study posed the following questions:(1) What are the preferred leadership styles of the practicing

female superintendents in Texas as measured by Bolman & Deal's (2003) four frames of leadership? (2) What are the predominant behaviors that female superintendents in Texas identify within each frame of leadership? (3) How do the preferred leadership styles and behaviors influence the superintendents' every day performance? This study was relied on a mixed method approach, quantitative and qualitative. The quantitative component involved surveying 50 female superintendents, using the Leadership Orientations (Self-Report) survey (Bolman & Deal, 1990). The qualitative component included a semi-structured interview which asked follow up questions with six selected female superintendents (two from rural, two from suburban, and two from urban districts) who consented to the interview regarding the influence of their leadership preferences. The findings suggest participants' preferred leadership style relates to the Human Resource frame which include: being an inspirational leader, utilizing interpersonal skills,

making good decisions; as well as, coaching and developing people. Findings also suggest that predominant behaviors include: supporting others, building trusting relationships through collaboration, and being participative. The preferred leadership styles and behaviors' influence on female superintendents' everyday performance resulted in embracing collaboration, being transparent, sharing a vision, being passionate, and building trusting relationships. Additionally, beliefs and behaviors that lead to success include: being honest, depersonalize the situations, education makes a difference, adopt flexibility, and power to make decisions. The characteristics that lead to success are: being spiritual, being organized, being committed, and willing to help others. Furthermore, the following advice was offered: learn to cope with high level of visibility, become knowledgeable of the district's needs and characteristics, and develop a professional image. Finally, implications for aspiring female superintendents, superintendent

preparation programs and school boards members are also presented.
